

CONTENTS

PREFACE	IX
CONTRIBUTORS	X
1 INTRODUCTION	1
1.1 Introduction - C. T. de Wit	3
2 POTENTIAL CROP PRODUCTION	11
2.1 Physiological principles - H. D. J. van Heemst	13
2.1.1 CO ₂ assimilation of a single leaf	14
2.1.2 Canopy CO ₂ assimilation	17
2.1.3 Respiration	21
2.1.4 Dry matter accumulation	24
2.2 Crop phenology and dry matter distribution - H. D. J. van Heemst	27
2.2.1 Introduction	27
2.2.2 Development and dry matter distribution in rice	31
2.2.3 Development and dry matter distribution in maize	34
2.2.4 Development and dry matter distribution in cassava	37
2.3 A simple model of potential crop production - H. van Keulen	41
2.3.1 Introduction	41
2.3.2 An actual example	43
2.3.3 Comparison with measurement	57
3 CROP PRODUCTION AS DETERMINED BY MOISTURE AVAILABILITY	61
3.1 Potential evapotranspiration - J. A. A. Berkhout and H. van Keulen	63
3.1.1 Introduction	63
3.1.2 Radiation	63
3.1.3 Evaporation	69
3.1.4 Potential evapotranspiration	74

3.2	The water balance of soil - P. M. Driessen	76
3.2.1	Basic principles of soil-moisture dynamics	78
3.2.2	The individual terms of the water balance	85
3.2.3	Solution of the water balance equation for all time intervals in a growing season	110
3.2.4	Variable adjustment following the water balance analysis for one time interval	112
3.3	The relation between water use and crop production - H. van Keulen and H. H. van Laar	117
3.3.1	The concept of the transpiration coefficient	117
3.3.2	Application of the transpiration coefficient	122
3.3.3	The influence of nutritional status	124
3.3.4	Transpiration coefficient and water-use efficiency	127
3.4	A simple model of water-limited production - H. van Keulen	130
3.4.1	Introduction	130
3.4.2	Experimental details	130
3.4.3	The actual calculation procedure	152
4	CROP PRODUCTION AS DETERMINED BY NUTRIENT AVAILABILITY	153
4.1	Crop yield and nutrient requirements - H. van Keulen	155
4.1.1	Introduction	155
4.1.2	Nutrient supply and crop response	155
4.1.3	Yield-uptake relations	160
4.1.4	Application rate-uptake relations	173
4.1.5	Interaction between elements	180
4.2	Nutrient demand and fertilizer requirements - P. M. Driessen	182
4.2.1	Recognition of nutrient limitation	182
4.2.2	Nutrient uptake from unfertilized soils	184
4.2.3	The recovery of nutrients applied in fertilizers	187
4.2.4	The nutrient requirements from fertilizer	193
5	THE COLLECTION AND TREATMENT OF BASIC DATA	201
5.1	Introduction - P. M. Driessen	203
5.2	Meteorological data - H. van Keulen and H. D. J. van Heemst	208
5.2.1	Radiation	208
5.2.2	Air temperature	209
5.2.3	Air humidity	209

5.2.4	Wind speed	210
5.2.5	Precipitation	210
5.2.6	Potential (evapo)transpiration	211
5.3	Soil data - P.M. Driessen	212
5.3.1	Soil physical data	212
5.3.2	Soil chemical data	224
5.4	Plant data - H. van Keulen	235
5.4.1	Photosynthetic capacity	235
5.4.2	Respiratory losses	236
5.4.3	Phenology	237
5.4.4	Dry matter distribution	240
5.4.5	Stomatal behaviour	243
5.4.6	Nutrient requirements	245
5.4.7	Some additional data	245
6	CROPPING SYSTEMS	249
6.1	Crop calendar, workability and labour requirements - H.D.J. van Heemst	251
6.1.1	Introduction	251
6.1.2	Crop calendar	251
6.1.3	Workability	252
6.1.4	Labour requirements	253
6.1.5	The choice between alternative applications of human activity	258
6.1.6	Crop activity calendar and labour requirements for transplanted rice, maize and cassava in north eastern Thailand	259
6.2	Low-input farming - H. Schouten	263
6.2.1	Introduction	263
6.2.2	Basic needs	263
6.2.3	Equilibrium yields in agricultural systems	266
6.2.4	Shifting cultivation	269
6.2.5	Paddy cultivation in monoculture	272
6.2.6	A crop mix example for north eastern Thailand	274
6.3	Weeds, pests and diseases - F.H. Rijdsdijk	277
6.3.1	Introduction	277
6.3.2	Weed models	277
6.3.3	Weeding	281
6.3.4	Pests and diseases	292
6.3.5	Dynamics of polycyclic population growth	293
6.3.6	Interaction of nutrient status with pests and diseases	300

6.3.7	Effects of weather	302
6.3.8	Other effects on population growth	302
6.3.9	Control of weeds, pests and diseases	303
7	LAND IMPROVEMENT	307
7.1	Reclamation - J. Wolf	309
7.1.1	Introduction	309
7.1.2	Effects of reclamation	310
7.1.3	A simulated example	314
7.1.4	Physical inputs for reclamation	318
8	APPLICATION OF AGRONOMIC INFORMATION	327
8.1	The use of agronomic information in the socio-economic models of the Centre for World Food Studies - D. C. Faber	329
8.1.1	Introduction	329
8.1.2	Characteristics and structure of the study: a modelling approach	330
8.1.3	Farm energy	336
8.1.4	The socio-economic factors	338
8.1.5	Regional planning	338
8.1.6	International trade and aid	339
8.1.7	Summary	340
9	COMPUTER MODELS OF CROP PRODUCTION	341
9.1	A FORTAN model of crop production - J. Wolf, F. H. Rijdsijk and H. van Keulen	343
9.1.1	Introduction	343
9.1.2	Description of the simulation model	344
9.1.3	Variable data base of the simulation model	372
9.1.4	Subsection	375
9.1.5	List of acronyms	376
10	ANSWERS TO EXERCISES	385
11	LIST OF SYMBOLS	435
12	INDEX	447
13	REFERENCES	453
	Appendix A. Listing of the model	463
