<i>Contributor contact details</i>	xi
1 Introduction	1
<i>S. Brul, University of Amsterdam and Unilever Food and Health Research Institute, S. J. C. van Gerwen, Unilever Foods, The Netherlands, and M. H. Zwietering, Wageningen University, The Netherlands</i>	
1.1 References	4
Part I Building models for predictive microbiology	
2 Predictive microbiology: past, present and future	7
<i>T. A. McMeekin, L. A. Mellefont and T. Ross, Australian Food Safety Centre of Excellence, University of Tasmania, Australia</i>	
2.1 Introduction	7
2.2 Turning data into knowledge	11
2.3 Case studies of critical analysis	12
2.4 Recent systematic analysis of literature and the advent of quantitative microbial risk assessment (QMRA)	15
2.5 QMRA and predictive microbiology	15
2.6 Advances in technology for the application of predictive models	17
2.7 Conclusions	18
2.8 References	19
3 Experimental design, data processing and model fitting in predictive microbiology	22
<i>M. A. J. S. van Boekel and M. H. Zwietering, Wageningen University, The Netherlands</i>	
3.1 Introduction	22

3.2	Experimental design	24
3.3	Data processing	34
3.4	Model fitting	36
3.5	Future trends	38
3.6	Sources of further information and advice	39
3.7	References	39
3.8	Appendix	42
4	Uncertainty and variability in predictive models of microorganisms in food	44
	<i>M. J. Nauta, National Institute for Public Health and the Environment, The Netherlands</i>	
4.1	Introduction	44
4.2	Case study – part 1	45
4.3	Imprecise predictive models	46
4.4	Case study – part 2	48
4.5	A closer look at variability	51
4.6	A closer look at uncertainty	52
4.7	Separation of uncertainty and variability	54
4.8	Case study – epilogue	57
4.9	Categorising questions of food professionals	59
4.10	GMPs for unpredictable microbes	60
4.11	Current developments and future trends: towards novel predictive models	63
4.12	Conclusions	65
4.13	References	65
5	Modelling lag-time in predictive microbiology with special reference to lag phase of bacterial spores	67
	<i>J. P. P. M. Smelt and S. Brul, University of Amsterdam, The Netherlands</i>	
5.1	Introduction: general aspects of lag-time	67
5.2	Lag-time of bacterial spores, transformation of the spore to vegetative cells	69
5.3	Quantitative aspects, mathematical modelling	73
5.4	Lag-times in real foods	78
5.5	Conclusions	79
5.6	References	79
6	Application of models and other quantitative microbiology tools in predictive microbiology	82
	<i>J. D. Legan, Kraft Foods, USA</i>	
6.1	Introduction	82
6.2	Definitions	82
6.3	Applications of models and databases	83

6.4	Access to models	93
6.5	Other quantitative microbiology tools	98
6.6	Future trends	103
6.7	Sources of further information and advice	104
6.8	Acknowledgements	105
6.9	References	106
7	Predictive models in microbiological risk assessment	110
	<i>M. H. Zwietering, Wageningen University, The Netherlands, and</i>	
	<i>M. J. Nauta, National Institute for Public Health and the Environ-</i>	
	<i>ment, The Netherlands</i>	
7.1	Quantitative microbiological risk assessment	110
7.2	Quantitative microbiology	111
7.3	Recontamination	112
7.4	Linking models	113
7.5	Information sources	119
7.6	Representativeness of models	120
7.7	Food Safety Objectives and risk assessment	121
7.8	Examples of structured approaches of risk assessment	122
7.9	Conclusions	124
7.10	References	125
Part II	New approaches to microbial modelling in specific areas of	
	predictive microbiology	
8	The non-linear kinetics of microbial inactivation and growth in	
	foods	129
	<i>M. G. Corradini and M. Peleg, University of Massachusetts, USA</i>	
8.1	Introduction	129
8.2	The traditional primary models of inactivation and growth	130
8.3	Traditional secondary models	132
8.4	Sigmoid isothermal survival curves	143
8.5	Non-isothermal inactivation	145
8.6	Empirical growth models	149
8.7	Simulation of non-isothermal growth curves	154
8.8	Conclusions	156
8.9	Acknowledgements	158
8.10	References	158
9	Modelling of high-pressure inactivation of microorganisms in	
	foods	161
	<i>A. Diels, I. Van Opstal, B. Masschalck and C. W. Michiels,</i>	
	<i>Katholieke Universiteit Leuven, Belgium</i>	
9.1	Introduction	161

9.2	Factors affecting microbial inactivation by high-pressure processing	162
9.3	Current models: strengths and weaknesses	169
9.4	Further developments in the modelling of pressure–temperature processes	183
9.5	Conclusions	190
9.6	References	191
10	Mechanistic models of microbial inactivation behaviour in foods ..	198
	<i>A. A. Teixeira, University of Florida, USA</i>	
10.1	Introduction	198
10.2	Case for mechanistic models	199
10.3	Development of mechanistic models for microbial inactivation	203
10.4	Model validation and comparison with others	205
10.5	Applications of microbial inactivation mechanistic models ...	208
10.6	Strengths, weaknesses, and limitations of mechanistic models	210
10.7	Future trends with mechanistic models	211
10.8	Sources of further information and advice	212
10.9	References	212
11	Modelling microbial interactions in foods	214
	<i>F. Leroy and L. De Vuyst, Vrije Universiteit Brussel, Belgium</i>	
11.1	Introduction	214
11.2	Measuring growth and interactions of bacteria in foods	216
11.3	Developing models of microbial interactions	217
11.4	Applications and implications for food processors	221
11.5	Future trends	222
11.6	References	224
12	A kinetic model as a tool to understand the response of <i>Saccharomyces cerevisiae</i> to heat exposure	228
	<i>F. Monsenides, University of Amsterdam (current address: EML Research gGmbH, Germany), B. Bakker, Vrije Universiteit Amsterdam, The Netherlands, and S. Brul, K. Hellingwerf and J. Teixeira de Mattos, University of Amsterdam, The Netherlands</i>	
12.1	Introduction	228
12.2	Experimental data	230
12.3	The model	237
12.4	Validation	239
12.5	Conclusions	240
12.6	References	242
12.7	Addendum	246

13 Systems biology and food microbiology	250
<i>S. Brul, University of Amsterdam, The Netherlands and</i>	
<i>H. V. Westerhoff, Free University of Amsterdam, The Netherlands</i>	
13.1 Introduction	250
13.2 Systems biology: biology at last	250
13.3 Systems biology and food microbiology	259
13.4 Food production: metabolic engineering	261
13.5 Food safety	270
13.6 Areas for systems food microbiology in microbial food spoilage research	273
13.7 Models of microbial ecology and food consumption	274
13.8 Sources of further information and advice	276
13.9 Acknowledgements	277
13.10 References	277
13.11 Addendum 1	282
13.12 Addendum 2	286
