
Contents

| | |
|---|------------|
| Preface | vii |
| Acknowledgements | ix |
| 1 Introduction | 1 |
| Terminology used in this book | 2 |
| A look to the past | 5 |
| Invasion biology of the twenty-first century | 10 |
| PART I The invasion process | 13 |
| 2 Dispersal | 15 |
| Stages of the invasion process | 15 |
| Dispersal and propagule pressure | 17 |
| The dispersal process | 21 |
| Are introduction rates increasing? | 28 |
| Summary | 29 |
| 3 Establishment | 30 |
| Establishment and traits | 30 |
| Establishment and invasibility | 32 |
| Invasibility and diversity | 33 |
| Findings from small-scale experiments | 34 |
| Findings from larger-scale and non-experimental studies | 35 |
| Problems with the diversity–invasibility hypothesis | 36 |
| An effort at resolution | 38 |
| Invasibility, resources, and environmental heterogeneity | 40 |
| Fluctuating resources | 40 |
| Environmental heterogeneity | 41 |
| Invasibility and the study of diversity | 44 |
| Invasibility and physical stress | 45 |
| Invasibility and enemies | 47 |
| Invasibility, facilitation, and mutualisms | 51 |
| The geography of establishment | 52 |
| Summary | 55 |
| 4 Persistence and spread | 57 |
| Iterative dispersal and establishment episodes (persistence and spread) | 57 |
| Traits, persistence, and spread | 60 |

| | |
|---|------------|
| Genetic obstacles to persistence and spread | 63 |
| Opportunities for persistence and spread | 67 |
| Species' decline and range contraction | 68 |
| Predicting current and future ranges of non-native species | 70 |
| Summary | 73 |
| 5 Evolution | 74 |
| Evolution during dispersal | 74 |
| Evolution by the new species following arrival | 74 |
| Hybridization | 78 |
| Epigenetic effects | 79 |
| Evolution by the long-term residents | 79 |
| Evolutionary diversification | 80 |
| Summary | 82 |
| 6 Understanding and predicting invasions: an Integrated Approach | 83 |
| Using traits to predict invasiveness | 83 |
| Predicting invasibility | 85 |
| Traits, invasibility, and propagule pressure: an integrated approach | 87 |
| The concept of invasion pressure | 88 |
| Implications of the invasion cliff | 93 |
| Summary | 96 |
| PART II Impacts and management | 99 |
| 7 Impacts of invasions | 101 |
| Impacts on human health and safety | 101 |
| Economic impacts | 104 |
| Ecological impacts | 106 |
| Impacts on populations and biodiversity | 106 |
| Impacts on food webs and communities | 122 |
| Impacts on biogeochemical processes | 126 |
| Impacts altering the physical structure of the environment | 128 |
| The creation of novel ecosystems | 130 |
| Summary | 131 |
| 8 Management of invasive species | 132 |
| Efforts to prevent introductions | 132 |
| Efforts to detect nascent invasions | 138 |
| Efforts to identify invasive populations and susceptible environments | 139 |
| Efforts to eradicate | 139 |
| Efforts to prevent subsequent persistence and spread | 140 |
| Biological control | 140 |
| Managing the environment | 141 |
| Application of new technologies | 143 |
| Management by directed evolution | 144 |
| Managing biotic homogenization | 146 |

| | |
|--|-----|
| Managing ' <i>inter-situ</i> ' reintroduction efforts | 146 |
| Use of regulations and legal frameworks | 147 |
| Use of citizen volunteers in management efforts | 148 |
| Invasive species control as a means to solve other conflicts | 148 |
| The need for extensive and accessible databases | 149 |
| The 'LTL' approach | 150 |
| Challenges, risks, and pitfalls of management efforts | 151 |
| Impact does not equal mechanism | 151 |
| The playing field and the players keep changing | 151 |
| Problems with eradication | 151 |
| Taxonomic uncertainty | 152 |
| Challenges of biological control | 153 |
| Unintended consequences | 154 |
| Describing and perceiving invasion harm | 156 |
| Diverse public perspectives | 156 |
| The relevance of invasion research to invasion management | 157 |
| Summary | 159 |

PART III Reflections **161**

9 Framing biological invasions **163**

| | |
|-------------------------|-----|
| Issues of categories | 163 |
| Issues of change | 165 |
| Issues of communication | 167 |
| Summary | 169 |

10 Researching invasion biology **171**

| | |
|---|-----|
| Issues of specialization and dissociation | 171 |
| Efforts to re-associate | 175 |
| Issues of taxonomic and geographic specialization | 177 |
| Summary | 179 |

11 Disciplinary challenges **180**

| | |
|-----------------------------------|-----|
| Issues of pluralism | 180 |
| Issues of authority | 181 |
| Issues of paradigms | 184 |
| Influences from community ecology | 184 |
| Increasing discontent | 184 |
| Calls for change | 186 |
| Summary | 186 |

12 Conclusion **188**

| | |
|------------------------------------|-----|
| Invasion research priorities | 188 |
| Invasion management considerations | 189 |
| Looking ahead | 190 |
| SPRED ecology | 191 |
| In closing | 192 |

| | |
