<i>List of Figures</i>	vii
<i>List of Tables</i>	ix
<i>List of Contributors</i>	xi
<i>Preface</i>	xiii
1 Introduction <i>Michael Freeman and Oliver R. Goodenough</i>	1
2 Law, Responsibility and the Brain <i>Dean Mobbs, Hakwan C. Lau, Owen D. Jones, and Christopher D. Frith</i>	5
3 Brain Imaging and Courtroom Evidence: On the Admissibility and Persuasiveness of fMRI <i>Neal Feigenson</i>	23
4 Mind the Gap: Problems of Mind, Body and Brain in the Criminal Law <i>Lisa Claydon</i>	55
5 Self-Exclusion Agreements: Should We Be Free not to Be Free to Ruin Ourselves? Gambling, Self-Exclusion Agreements and the Brain <i>Florian Wagner-von Papp</i>	81
6 The Problems with Blaming <i>Theodore Y. Blumoff</i>	127
7 Why Distinguish “Mental” and “Physical” Illness in the Law of Involuntary Treatment? <i>John Dawson and George Szmukler</i>	173
8 A Stable Paradigm: Revisiting Capacity, Vulnerability and the Rights Claims of Adolescents after <i>Roper v. Simmons</i> <i>Catherine J. Ross</i>	183
9 Thinking Like a Child: Legal Implications of Recent Developments in Brain Research for Juvenile Offenders <i>Katherine Hunt Federle and Paul Skendelas</i>	199

10	Legal Implications of Memory-Dampening <i>Adam Kolber</i>	215
11	Reframing the Good Death: Enhancing Choice in Dying, Neuroscience, End-of-Life Research and the Potential of Psychedelics in Palliative Care <i>Robin Mackenzie</i>	239
12	Equality in Exchange Revisited: From an Evolutionary (Genetic and Cultural) Point of View <i>Bart Du Laing</i>	267
13	Just (and Efficient?) Compensation for Governmental Expropriations <i>Jeffrey Evans Stake</i>	299
14	Examining the Biological Bases of Family Law: Lessons to be Learned for the Evolutionary Analysis of Law <i>June Carbone and Naomi Cahn</i>	323
15	Why Do Good People Steal Intellectual Property? <i>Oliver R. Goodenough and Gregory Decker, J.D.</i>	345
16	Cues in the Courtroom: When Do They Improve Jurors' Decisions? <i>Cheryl Boudreau</i>	373
17	Reflections on Reading: Words and Pictures and Law <i>Christina Spiesel</i>	391
	<i>Index</i>	413

# List of Figures

2.1	Regions Associated with Normal and Atypical Social Behaviour	10
2.2	Cases Where Brain Anomalies have, or have not, been Linked to Anti-social Behaviour	17
3.1	fMRI Data to BOLD Data	32
15.1	Traditional, Massively Over-simplified Model of the Movement from Sensory Input to Action in the Brain	351
15.2	Plausible, Less Over-simplified Model of the Movement from Sensory Input to Action in the Brain	352
15.3	Combine the Model with Other Systems and Effects	353

# List of Tables

2.1	Examples of Prefrontal Brain Regions Associated with Pro-social Behaviour	7
16.1	The Effects that Common Interests, a \$15 Penalty for Lying, and a 100% Chance of Verification have on Sophisticated and Unsophisticated Subjects	385
16.2	Difference in the Percentage of Problems Answered Correctly Among Sophisticated and Unsophisticated Subjects, Relative to their Sophisticated and Unsophisticated Counterparts in the Control Group	386
