# Tables and Figures

## Tables

2.1	Modes of interaction	47
3.1	Overview: Aggregate, collective, and corporate actors	57
7.1	The voting paradox	157
A1.1	Changes in gross domestic product, employment, and consumer prices, average rates of unemployment	238
A1.2	Consumer price inflation and annual increases of unit labor costs in manufacturing, 1974–1980	239
A2.1	Random payoffs, 4 players, 2 options	258
A2.2	Nash equilibria in sequential games	261
A2.3	Average normalized joint-payoff gains through negative coordination	262
A2.4	Average normalized joint-payoff gains through bargaining	262

## Figures

I.1	“Monetarist” game in normal and extensive form	8
I.2	“Keynesian” game in normal and extensive form	9
1.1	Forward-looking hypotheses	25
1.2	Backward-looking hypotheses	26
2.1	The domain of interaction-oriented policy research	44
3.1	Types of collective actors	55
4.1	Constellations of pure coordination and pure conflict	74
4.2	Four mixed-motive games	75
4.3	Deadlock and Rambo games	79
4.4	Social regulations in the European Union	82
4.5	European harmonization of welfare-state rules	83
4.6	Five interaction orientations	86
4.7	Individualistic, competitive, and solidaristic transformations of two game constellations	88
4.8	The Kaldor welfare criterion	92

5.1	Nash equilibria (N) in four mixed-motive games	101
5.2	Games without a Nash equilibrium in pure strategies	103
5.3	Negative coordination	113
6.1	Two implementation games	118
6.2	Matrix and negotiation diagram of Prisoner's Dilemma	119
6.3	Negotiation space	120
6.4	Conflict over distribution	122
6.5	Reference points of distributive justice: Zero, status quo, or nonagreement	123
6.6	Effects of misrepresentation	125
6.7	Four types of negotiation processes	126
6.8	Side payments in a compulsory negotiation system	127
6.9	Bargaining to avoid welfare losses	128
6.10	Issue linkage	129
6.11	Dependence of production on distribution	134
6.12	Forms of dependence in a relationship between A and B	140
6.13	Battle of the Sexes under conditions of mutual and unilateral dependence	141
7.1	Preference distributions in a single issue dimension	158
7.2	Cyclical instability in two-dimensional issue space	159
7.3	The suboptimality of majority decisions	161
8.1	Hierarchical coordination	173
8.2	Government-opposition-voters sequential game	185
9.1	Negotiations in a hierarchy	199
A1.1	Inflation and unemployment in OECD countries, 1973–1983	218
A1.2	Typology of economic policy problems in the 1970s	220
A1.3	Effects of fiscal and monetary policy under conditions of stagflation	221
A1.4	Effects of wage policy under conditions of stagflation	221
A1.5	Levels of inflation and unemployment as outcomes of government and union strategies under conditions of stagflation	222
A1.6	Macroeconomic coordination: The union view	225
A1.7	Macroeconomic coordination: The central 1-bank view	225
A1.8	The Keynesian game of macroeconomic coordination	226
A1.9	The monetarist game of macroeconomic coordination	226
A1.10	Class bases of Keynesian and monetarist strategies	228
A1.11	Voter responses to coordination game outcomes	230
A1.12	Historical sequences of coordination and politics games	233
A2.1	Ideal types of negotiations	253
A2.2	Bargaining over divisible outcomes	253

A2.3	Problem Solving	254
A2.4	Positive Coordination	255
A2.5	Welfare effects of dictatorial coalitions	263
A2.6	Joint payoffs from Positive Coordination	264
A2.7	Positive Coordination plus Parametric Adjustment	265
A2.8	Positive plus Negative Coordination	266
A2.9	Positive plus Negative Coordination plus Bargaining	267
A2.10	Comparison of welfare effects when the status quo is at the joint-payoff minimum	268
A2.11	Welfare effects with random status quo	268
A2.12	Search costs and welfare effects	270
