LIST OF ILLUSTRATIONS vii

INTRODUCTION xvii

1. The Didactic and the Elegant: Some Thoughts on Scientific and Technological Illustrations in the Middle Ages and Renaissance 3
Bert S. Hall
2. Temples of the Body and Temples of the Cosmos: Vision and Visualization in the Vesalian and Copernican Revolutions 40
Martin Kemp
3. Descartes's Scientific Illustrations and 'la grande mécanique de la nature' 86
Brian S. Baigrie
4. Illustrating Chemistry 135
David Knight
5. Representations of the Natural System in the Nineteenth Century 164
Robert J. O'Hara

vi Contents

6. Visual Representation in Archaeology: Depicting the Missing-Link
in Human Origins 184
Stephanie Moser
 7. Towards an Epistemology of Scientific Illustration 215
David Topper
 8. Illustration and Inference 250
James Robert Brown
 9. Visual Models and Scientific Judgment 269
Ronald N. Giere
 10. Are Pictures Really Necessary? The Case of Sewall Wright's
'Adaptive Landscapes' 303
Michael Ruse

Illustrations

- 1.1 Dracontea, three depictions. Figure 1a, courtesy of Österreichische Nationalbibliothek; 1.b, courtesy of Bayerische Staatsbibliothek; 1.c, courtesy of University of Leiden Library. 8
- 1.2 Sunspots, twelfth century. Courtesy of the President and Fellows of Corpus Christi College, Oxford. 12
- 1.3 Bone man, etc. Courtesy of Bayerische Staatsbibliothek. 13
- 1.4 Guido da Vigevano's anatomized cadaver. 14
- 1.5 Fröhlich's anatomized woman. Courtesy of the Boston Medical Library in the Francis A. Countway Library of Medicine. 15
- 1.6 Pines and larches from Conrad Gesner's sketchbook. Courtesy of Universitätsbibliothek Erlangen-Nürnberg. 18
- 1.7 Ramelli's crankshaft well windlass. Reproduced with permission from *The Various and Ingenious Machines of Agostino Ramelli* (1588), ed. and trans. M.T. Gnudi and E. Ferguson (Baltimore: Johns Hopkins University Press, 1976), p. 231. 24
- 1.8 Windlass well. From *Ji Qi Tu Shuo*. 25
- 1.9 Verge and escapement for an elaborate astronomical clock. Reproduced with permission from Giovanni de'Dondi, *Tractatus Astrarii* (Rome: Biblioteca Apostolica Vaticana, 1960). Courtesy of the Biblioteca Apostolica Vaticana. 33
- 2.1 Study of the foetus and the womb, with optical and mechanical diagrams, by Leonardo da Vinci. Windsor, Royal Library, 19102. 46

- 2.2 Hans Wächtlin, dissection of the brain, thorax, and abdomen, woodcut, 1517. From L. Fries, *Spiegel der Artzny* (Strasbourg, 1519). 48
- 2.3 Muscle-man with rope, woodcut. From Berengario da Carpi, *Commentaria ... super anatomia Mundini* (Bologna, 1521). 50
- 2.4 Dissection of the abdomen of a woman, woodcut. From Charles Estienne, *La Dissection des parties du corps humain* (Paris, 1546). 52
- 2.5 Tools for dissection, woodcut, designed by Jan Steven van Kalkar. From Andreas Vesalius, *De humani corporis fabrica* (Basel, 1543). 53
- 2.6 Skeleton from the side, woodcut, designed by Jan Steven van Kalkar. From Andreas Vesalius, *De humani corporis fabrica* (Basel, 1543). 55
- 2.7 Demonstration of a hinge, woodcut. From Andreas Vesalius, *De humani corporis fabrica* (Basel, 1543). 56
- 2.8 Muscles of the upper arm and forearm, and tendons of the wrist, woodcut, designed by Jan Steven van Kalkar. From Andreas Vesalius, *De humani corporis fabrica* (Basel, 1543). 58
- 2.9 Superficial dissection of the muscles from the front, engraving with annotations in ink. From Bartolomeo Eustachio, *Tabulae anatomicae* (Rome, 1722). Library, University of St Andrews. 59
- 2.10 Chorography compared to pictures of the eye and ear. From Petrus Apianus, *Astronomicum caesareum* (Ingolstadt, 1540). 61
- 2.11 Diagram of the orbits of the earth and planets, woodcut with underlining in pen and paste marks. From Nicolaus Copernicus, *De revolutionibus orbium caelestium* (Nuremberg, 1543). Library, University of St Andrews. 63
- 2.12 Andrea Mantegna, oculus in the ceiling of the *Camera degli Sposi*, Mantua, Palazzo Ducale, 1465–74. 66
- 2.13 Diagram of the motions of the pole around a mean position, woodcut. From Nicolaus Copernicus, *De revolutionibus orbium caelestium* (Rome, 1543). 68
- 2.14 Torquetum, woodcut. From Petrus Apianus, *Cosmographicus liber* (Landshut, 1524). 70
- 2.15 *Mural Quadrant* or *Quadrans Tychonicus*, engraving. From Tycho Brahe, *Astronomiae insturatae mechanica* (Wandesbeck, 1598). 72
- 2.16 *Lesser Quadrant*, engraving. From Tycho Brahe, *Astronomiae insturatae mechanica* (Wandesbeck, 1598). 74

- 2.17 Elevation and plan of the palace of Uraniborg on the island of Hven, engraving. From Tycho Brahe, *Astronomiae instauratae mechanica* (Wandesbeck, 1598). 76
- 2.18 Temple of the Astronomers. From Johannes Kepler, *Tabulae Rudolphinae* (Ulm, 1627). 77
- 2.19 Demonstration of the orbits of the planets. From Johannes Kepler, *Mysterium cosmographicum* (Tubingen, 1596). 78
- 2.20 Demonstration of an orbit by analogy to a boat in a stream. From Johannes Kepler, *Astronomia nova* (Heidelberg, 1609). 81
- 3.1–11 Illustrations reproduced with kind permission from René Descartes, *Oeuvres complètes*, éditées par Charles Adam et Paul Tannery (Paris: Librairie philosophique J. Vrin, 1964–74).
- 3.1 Reciprocal muscle action. From *l'Homme de René Descartes* (1664). 90
- 3.2 The formation of vapours. From Descartes, *Les Météores* (1637). 91
- 3.3 Perception of distance through binocular vision. From *l'Homme de René Descartes* (1664). 92
- 3.4 The human heart. From *l'Homme de René Descartes* (1664). 93
- 3.5 A device for preparing glass. From Descartes, *La Dioptrique* (1637). 94
- 3.6 An unusual microscope. From Descartes, *La Dioptrique* (1637). 95
- 3.7 Centrifugal force. From Descartes, *Principia philosophiae* (1644). 106
- 3.8 Whirlpools of matter. From Descartes, *Principia philosophiae* (1644). 117
- 3.9 Grapes in a vat illustrating the properties of light. From Descartes, *La Dioptrique* (1637). 119
- 3.10 Magnetic lines of force. From Descartes, *Principia philosophiae* (1644). 125
- 3.11 The formation of the earth. From Descartes, *Principia philosophiae* (1644). 126
- 4.1 David's portrait of the Lavoisiers. From Guyton de Morveau, *Méthode de nomenclature chimique* (Paris: Cuchet, 1787). 138
- 4.2 Howard's portrait of Davy. Frontispiece from J. Davy, *Memoirs of the Life of Sir Humphry Davy*, vol. 1 (London: Longman, 1836). 139

- 4.3 Lawrence's portrait of Davy. Frontispiece from J.A. Paris, *The Life of Sir Humphry Davy* (London, 1831). 140
- 4.4 Gillray cartoon, laughing gas, 1801. 142
- 4.5 A laboratory, 1804. Reproduced with kind permission from J.M. López Piñero, *El Grabado en la Ciencia Hispanica* (Madrid, 1987), plate 28. 143
- 4.6 Laboratory aboard *HMS Challenger*. From C.W. Thomson, *The Voyage of the Challenger: The Atlantic* (London, 1887), p. 19. 143
- 4.7 Teaching laboratory, University College, London. From N. Harte and J. North, *The World of University College* (London, 1978), p. 58. 145
- 4.8 Davy's safety lamps. From H. Davy, *Collected Works*, vol. 6 (London: Smith, Elder, 1839-40), plate 2. 148
- 4.9 An aniline dye works, 1880s. From C.W. Vincent, *Chemistry as Applied to the Arts and Manufacturers, by Writers of Eminence*, vol. 1 (London: William Mackenzie, n.d.), p. 215. 149
- 4.10 Photograph of Cannizzaro, 1898. From 'Memorial Lectures,' *Chemical Society* (1914), p. 207. 150
- 4.11 Cathode rays illustrated. From W. Crookes, 'Chemical Science,' *Report of the British Association for the Advancement of Science* (1891), p. 91. 152
- 4.12 Dalton's atomic symbols. From J. Dalton, *A New System of Chemical Philosophy*, vol. 1 (Manchester, 1808-11), pp. 218-19. 157
- 4.13 Crystal forms and chemical formulae. From R.P. Greg and W.G. Lettsom, *Minerology* (London, 1858), p. 365. 158
- 4.14 Making chlorides of phosphorus. From R. Kane, *Elements of Chemistry* (Dublin, 1842), p. 506. 161
- 5.1 The circular affinities of the inessorial order of birds. From N.A. Vigors, 'Observations on the Natural Affinities that Connect the Orders and Families of Birds,' *Transactions of the Linnean Society* (1824). 167
- 5.2 Analogies between the starling and crow families. From W. Swainson, *On the Natural History and Classification of Birds*, vol. 2 (London, 1837). 168
- 5.3 A portion of H.E. Strickland's 'Chart of the Natural Affinities of the Class of Birds.' From Sir William Jardine, *Memoirs of Hugh Edwin Strickland, M.A.* (London, 1858). 170

- 5.4 'Hexenfuss' of the crow family. From J.J. Kaup, 'Einige Worte über die systematische Stellung der Familie der Raben, Corvidae,' *Journal für Ornithologie* 2, Jahresversammlung, XLVII–LVII (1854). 171
- 5.5 The affinities of the fissirostral birds. From A.R. Wallace, 'Attempts at a Natural Arrangement of Birds,' *Annals of Magazine of Natural History* (1856). 172
- 5.6 The animal kingdom. From G. Lewis, *Natural History of Birds: Lectures on Ornithology in Ten Parts, Part I* (Philadelphia, 1866). 173
- 5.7 Reichenow's 'Stammbaum' of the class Aves (1882). Redrawn in R.B. Sharpe, *A Review of Recent Attempts to Classify Birds* (Budapest, 1891). 174
- 5.8 'Verticale Ansicht' of the evolutionary tree of birds. From M. Fürbringer (1888), as reprinted in Sharpe, *A Review of Recent Attempts to Classify Birds* (Budapest, 1891). 178
- 5.9 'Horizontale (Planimetrische) Projection' of Fürbringer's evolutionary tree (1888) at the upper horizon. 179
- 5.10 The phylogenetic tree of birds. From R.B. Sharpe, *A Review of Recent Attempts to Classify Birds* (Budapest, 1891). 180
- 6.1 Grafton Elliott Smith's australopithecine from Taungs, South Africa, 1925. With kind permission from the Illustrated London News Picture Library. 191
- 6.2 Raymond Dart's depiction of a South African ape-man family making and using tools of bone and horn. With kind permission from the Illustrated London News Picture Library. 194
- 6.3 Raymond Dart's depiction of ape-men contesting a lion's kill with hyenas and a vulture. With kind permission from the Illustrated London News Picture Library. 195
- 6.4 Robert Broom's australopithecines – *Paranthropus robustus* from South Africa, 1938. Alice Woodward. With kind permission from the Illustrated London News Picture Library. 198
- 6.5 A depiction of *Australopithecus africanus* by Maurice Wilson, ca. 1950. With kind permission from the British Museum of Natural History. 200
- 6.6 Early hominids featured in a pack-hunting model of human evolution. With kind permission from the British Museum of Natural History. 202

- 6.7 Louis and Mary Leakey's australopithecines – *Zinjanthropus boisei* from Olduvai Gorge, East Africa, 1960. 203
- 6.8 Louis and Mary Leakey's australopithecines – *Zinjanthropus boisei* and its successors at Olduvai Gorge, East Africa, 1961. 204
- 6.9 C.K. Brain's australopithecines – *Australopithecus africanus* from Swartkrans, South Africa, 1968. Courtesy of C.K. Brain. 209
- 7.1 Illustration of train and embankment. From Albert Einstein, *Relativity: The Special and General Theory* (New York, 1961), p. 25. Permission of the Albert Einstein Archives, The Hebrew University of Jerusalem, Israel. 217
- 7.2 Salamander. From Conrad Gesner, *Historia animalium, II* (1554). 223
- 7.3 Man-ape. From Conrad Gesner, *Historia animalium, I* (1551). 224
- 7.4 Indian in body paint. Watercolour by John White, ca. 1585. Permission of the Trustees of the British Museum. 228
- 7.5 *The Moose*. Oil on canvas by George Stubbs, 1770. Permission of the Hunterian Art Gallery, University of Glasgow. 231
- 7.6 The facial angle. From Petrus Camper, *Physical Dissertation on the Real Differences that Men of Different Countries and Ages Display in Their Facial Traits ...* (1791). 233
- 7.7 Galileo's first notes on the parabolic path of projectiles. From Stillman Drake, *History of Free Fall* (Toronto, 1989), p. 57. Permission of Wall and Emerson, Inc., Toronto; and Biblioteca Nazionale Centrale, Firenze. 237
- 7.8 Ball-bearings. Sketch by Leonardo da Vinci. From *Codex Madrid, I*, 20v. Permission of Biblioteca Nacional, Madrid. 238
- 7.9 Darwin's third tree of nature diagram. From Darwin's first notebook, ca. 1827–38. By permission of the Syndics of Cambridge University Library. 239
- 7.10 Impressions of Mars from Percival Lowell's logbook, 1894. Lowell Observatory photograph. Permission of the Lowell Observatory, Flagstaff, Arizona. 240
- 8.1 The Pythagorean theorem, including construction lines. 250
- 8.2 Picture which serves as a proof of a theorem from number theory. 251

- 8.3 Picture which serves as a proof of a theorem about infinite series. 252
- 8.4 Picture proving the relation between the arithmetic mean and geometric mean. 252
- 8.5 The first omega-minus event. From Brookhaven National Laboratory. 256
- 8.6 Joule's apparatus. From J. Joule, 'On the Mechanical Equivalent of Heat,' *Philosophical Transactions of the Royal Society* (1850). 256
- 8.7 Einstein's elevator thought experiment. Drawn by David Kotchan. 260
- 8.8 Newton's bucket theory thought experiment. Drawn by David Kotchan. 261
- 8.9 Leibniz's thought experiment. Drawn by David Kotchan. 262
- 8.10 Feynman diagrams. 266
- 9.1 A family of models of pendulums radiating out from the model of a simple pendulum. 274
- 9.2 Relationships among language, models, and objects in the real world. 276
- 9.3 Decision matrix for a choice between alternative models of the same real system. 278
- 9.4 A schematic representation of a crucial experiment. 279
- 9.5 Wegener's visual representation of the breakup of Gondwanaland. From A. Wegener, *The Origin of Continents and Oceans* (London, 1922). 282
- 9.6 Wegener's sketch of the Atlantic coastlines indicating continuous mountain ranges across the assumed line of separation. From A. Wegener, *Die Entstehung der Kontinente und Ozeane* (Braunschweig, 1915). 283
- 9.7 Longwell's map showing Australia fitting into the Arabian Sea. From W. van der Gracht et al. *Theory of Continental Drift* (Tulsa, 1928), p. 154. With permission of the Association of Petroleum Geologists. 286
- 9.8 Holmes's dynamic visual representation of convection currents splitting a continent to produce a new ocean. Reproduced from A. Holmes, *Principles of Physical Geology* (London, 1944), p. 506. 288

- 9.9 Hess's dynamic visual model of sea-floor spreading produced by convection currents. Reprinted by permission from H.H. Hess, 'History of Ocean Basins,' in A.E.J. Engel et al., eds., *Petrologic Studies* (Boulder, 1962), p. 607. 288
- 9.10 The first visual presentation of data and models by the California group investigating geomagnetic reversals. Reprinted with permission from *Nature* 198, pp. 1049-51. Copyright 1963, Macmillan Magazines Limited. 290
- 9.11 Vine and Matthews's models for magnetic profiles near ocean ridges. Reprinted with permission from *Nature* 199, pp. 947-9. Copyright 1963, Macmillan Magazines Limited. 292
- 9.12 The second visual presentation of data and models by the California group investigating geomagnetic reversals. Reproduced with permission from: A. Cox, R.R. Doell, and G.B. Dalrymple, 'Reversals of the Earth's Magnetic Field,' *Science* 144, pp. 1537-43. Copyright 1964, AAAS. 293
- 9.13 Vine and Wilson's visual comparison of magnetic data and crustal model for the Juan de Fuca Ridge. Reproduced with permission from: F.J. Vine and J.T. Wilson, 'Magnetic Anomalies over a Young Oceanic Ridge off Vancouver Island,' *Science* 150, pp. 485-9. Copyright 1965, AAAS. 294
- 9.14 A visual comparison of magnetic profiles of the Pacific-Antarctic Ridge with a corresponding model. Reproduced with permission from: W.C. Pitman and J.P. Heirtzler, 'Magnetic Anomalies over the Pacific-Antarctic Ridge,' *Science* 154, pp. 1164-71. Copyright 1966, AAAS. 296
- 9.15 A visual comparison of magnetic reversals in deep-sea sediments with the time scale for reversals in terrestrial lava flows. From N.D. Opdyke, B.P. Glass, J.D. Hays, and J.H. Foster, 'Paleomagnetic Study of Antarctic Deep-Sea Cores,' *Science* 154, pp. 349-57. Copyright 1966, AAAS. 297
- 9.16 Cox's summary of refinements in the California group's scale for geomagnetic reversals during the years 1963-6. Reproduced with permission from: A. Cox 'Geomagnetic Reversals,' *Science* 163, pp. 237-45. Copyright 1969, AAAS. 298
- 10.1 Four figures illustrating the various fates of a gene in a population. From Sewall Wright, 'Evolution in Mendelian Populations,' *Genetics* (1931). 307

- 10.2 The combinations of from two to five paired allelomorphs. From Sewall Wright, 'The Roles of Mutation, Inbreeding, Crossbreeding and Selection in Evolution,' *Proceedings of the Sixth International Congress of Genetics* (1932). 309
- 10.3 Diagrammatic representation of the field of gene combinations in two dimensions, instead of many thousands. From Sewall Wright, 'The Roles of Mutation, Inbreeding, Crossbreeding and Selection in Evolution,' *Proceedings of the Sixth International Congress of Genetics* (1932). 310
- 10.4 Random variability of a gene frequency under various specified conditions. From Sewall Wright, 'The Roles of Mutation, Inbreeding, Crossbreeding and Selection in Evolution,' *Proceedings of the Sixth International Congress of Genetics* (1932). 311
- 10.5 Field of gene combinations occupied by a population within the general field of possible combinations. From Sewall Wright, 'The Roles of Mutation, Inbreeding, Crossbreeding and Selection in Evolution,' *Proceedings of the Sixth International Congress of Genetics* (1932). 312
- 10.6 Two patterns of phyletic dichotomy. From G.G. Simpson, *Tempo and Mode in Evolution* (New York, 1944), p. 91. 314
- 10.7 Major features of equid phylogeny and taxonomy represented as the movement of populations on a dynamic selection landscape. From Simpson, *Tempo and Mode in Evolution*, p. 92. 315
- 10.8 The 'adaptive peaks' and 'adaptive valleys' in the field of gene combinations. From T. Dobzhansky, *Genetics and the Origin of Species* (New York, 1951), p. 9. 317
- 10.9 Two-dimensional fitness surface. From a letter from Sewall Wright to R.A. Fisher, 3 Feb. 1931. Reproduced from W. Provine, *Sewall Wright and Evolutionary Biology* (Chicago, 1986), p. 272. 325
