List of Figures	ix
Foreword	xi
Preface	xiii
I Mathematical Foundations	1
1 Mathematical Preliminaries: Energy and Stress	3
1.1 Finite Kinetic Energy: The Hilbert Space $L^2(\Omega)$	3
1.1.1 Other norms	7
1.2 Finite Stress: The Hilbert Space $X := H_0^1(\Omega)$	8
1.2.1 Weak derivatives and some useful inequalities	10
1.3 Some Snapshots in the History of the Equations of Fluid Motion	12
1.4 Remarks on Chapter 1	15
1.5 Exercises	15
2 Approximating Scalars	17
2.1 Introduction to Finite Element Spaces	17
2.2 An Elliptic Boundary Value Problem	26
2.3 The Galerkin–Finite Element Method	30
2.4 Remarks on Chapter 2	33
2.5 Exercises	34
3 Vector and Tensor Analysis	37
3.1 Scalars, Vectors, and Tensors	37
3.2 Vector and Tensor Calculus	39
3.3 Conservation Laws	43
3.4 Remarks on Chapter 3	48
3.5 Exercises	49

II	Steady Fluid Flow Phenomena	51
4	Approximating Vector Functions	53
4.1	Introduction to Mixed Methods for Creeping Flow	53
4.2	Variational Formulation of the Stokes Problem	56
4.3	The Galerkin Approximation	59
4.4	More About the Discrete Inf-Sup Condition	63
4.4.1	Other div-stable elements	66
4.5	Remarks on Chapter 4	66
4.6	Exercises	68
5	The Equations of Fluid Motion	71
5.1	Conservation of Mass and Momentum	71
5.2	Stress and Strain in a Newtonian Fluid	74
5.2.1	More about internal forces	75
5.2.2	More about V	76
5.3	Boundary Conditions	78
5.4	The Reynolds Number	83
5.5	Boundary Layers	87
5.6	An Example of Fluid Motion: The Taylor Experiment	91
5.7	Remarks on Chapter 5	92
5.8	Exercises	95
6	The Steady Navier–Stokes Equations	99
6.1	The Steady Navier–Stokes Equations	99
6.2	Uniqueness for Small Data	106
6.2.1	The Oseen problem	108
6.3	Existence of Steady Solutions	110
6.4	The Structure of Steady Solutions	114
6.5	Remarks on Chapter 6	117
6.6	Exercises	117
7	Approximating Steady Flows	121
7.1	Formulation and Stability of the Approximation	121
7.2	A Simple Example	124
7.3	Errors in Approximations of Steady Flows	125
7.4	More on the Global Uniqueness Conditions	131
7.5	Remarks on Chapter 7	132
7.6	Exercises	133
III	Time-Dependent Fluid Flow Phenomena	137
8	The Time-Dependent Navier–Stokes Equations	139
8.1	Introduction	139
8.2	Weak Solution of the NSE	141

8.3	Kinetic Energy and Energy Dissipation	145
8.4	Remarks on Chapter 8	147
8.5	Exercises	148
9	Approximating Time-Dependent Flows	151
9.1	Introduction	151
9.2	Stability and Convergence of the Semidiscrete Approximations	154
9.3	Rates of Convergence	158
9.4	Time-Stepping Schemes	161
9.5	Convergence Analysis of the Trapezoid Rule	165
	9.5.1 Notation for the discrete time method	165
	9.5.2 Error analysis of the trapezoid rule	168
9.6	Remarks on Chapter 9	175
9.7	Exercises	176
10	Models of Turbulent Flow	179
10.1	Introduction to Turbulence	179
10.2	The K41 Theory of Homogeneous, Isotropic Turbulence	181
	10.2.1 Fourier series	182
	10.2.2 The inertial range	183
10.3	Models in Large Eddy Simulation	186
	10.3.1 A first choice of ν_T	189
10.4	The Smagorinsky Model for ν_T	190
10.5	Near Wall Models: Boundary Conditions for the Large Eddies	192
10.6	Remarks on Chapter 10	194
10.7	Exercises	195
Appendix	Nomenclature	197
A.1	Vectors and Tensors	197
A.2	Fluid Variables	197
A.3	Basic Function Spaces and Norms	198
	A.3.1 Other norms	198
A.4	Velocity and Pressure Spaces and Norms	199
A.5	Finite Element Notation	200
A.6	Turbulence	200
