Contents in Detail

Preface xv

1 The Problem of Visual Space Perception 1
The Physical World and the Perceptual World 1
Geometrical Relationships 2
Physical Space 2
Perceptual (Visual) Space 3
Relationships among Spaces 3
Distal-Proximal Relationships 4
Projective Geometry: Geometrical Optics 4
Proximal Geometry: Geometry of Perspective 6
The Problem of Visual Space Perception 6

I Binocular Perception 7

2 Spatial Localization: Visual Directions 9
Monocular Localization of Directions 9
Monocular Visual Field 10
Binocular Visual Field 11
Objective Directions: Visual Lines 11
Subjective Directions: Visual Directions 12
Vergence Movements 14
Binocular Localization 17
Wells's Experiments 17
Cyclopean Eye 20
Law of Identical Visual Directions 21
Corresponding Points 23
Fusion 24
Horopter and Vieth-Müller Circle 24
Absolute Visual Directions 26
Summary 26

3 Stereopsis: Fusion and Horopters 29
The Problem of Binocular Depth Perception 29
Longitudinal Horopter and Retinal Disparity 31

Fusion and Double Images 34
Double Images When Disparity Is Large 34
Relative Depth and Fusion When Disparity Is Small 37
Panum's Fusional Areas 37
Different Horopters 41
Vertical and Torsional Disparity, Cyclofusion 42
Longitudinal Horopter, Point Horopter, and Fusion Horopter 42
Distance Horopters: Equidistance and Frontoparallel Plane Measurements 43
Hering-Hillebrand Deviation 43
Summary 45

4 Stereopsis: Traditional Stereograms 47
Stimulus Components of Stereoscopic Half-Images 47
Contour or Edge Disparity 47
Differential Perspective 49
Binocular Interposition 51
Gradient of Binocular Disparity 53
Perceptual Outcomes from Traditional Stereograms 54
Stereoscopic Depth Constancy 57
Dichoptic Stimulation 57
Binocular Rivalry, Suppression, and Luster 57
Summary 58

5 Cyclopean Perception 61
Random-Dot Stereograms 61
Wallpaper Phenomenon, Autostereogram 62
Stereoscopic Contours 65
Stereo Contours in Homogeneous Space 67
Two Mechanisms for Stereoscopic Depth 68
Local versus Global Disparity Ranges 70
Fine versus Coarse Disparities 70
Pyknostereopsis and Diastereopsis 70
Cyclopean Disparity Limits 71
Computational Theories, Correspondence Problem 73
Summary 73

II Monocular Perception 75

6 Stimulus Inadequacy: The Fundamental Problem of Monocular Perception 77
Stimulus Inadequacy 77
Visual Angle 77
Equivalent Configurations 78
Invariance, Noninvariance, and Constancy 80
Three Kinds of Theories 81
Empiricist (Helmholtzian) View 82
Psychophysical (Gibsonian) View 82
Automatic Perceptual System Activity 82
Chair Demonstration 83
Summary 85

7 Pictorial Cues, Oculomotor Adjustments, Automatic Organizing Processes, and Observer Tendencies 87
Pictorial Cues 87
Linear Perspective, Outline Shape 87
Relative Size 89
Texture Gradient 90
Height in the Picture Plane 90
Occlusion, Overlay, Interposition, or Superposition 91
Illumination and Reflectance Edges 93
Shading and Shadow 93
Aerial Perspective 96
Information from Oculomotor Adjustments 97
Accommodation and Convergence 97
Gradient of Focus 98
Eye Elevation 98
Automatic Organizing Processes 98
Figure-Ground Organization 99
Gestalt Organizational Laws 100
Apparent Motion 102
Induced Motion 103
Subjective Contours 103
Observer Tendencies 104
Summary 105

8 Empiricist View: Perceived Size and Shape 107
Perceived Size of Afterimages 107
Emmert's Law of Afterimages 107
Registered Distance 108
Hypotheses of Invariance 110
Size-Distance Invariance Hypothesis 111
Shape-Slant Invariance Hypothesis 112
Perceived Size of Objects 113
Measuring Perceived Size: Brunswick and Thouless Ratios 113
Size Constancy 114
Familiar Size 115
Perceived Visual Angle 116
Perceived Distance in a Scene 117
Perceived Shape of Objects 118
Shape Constancy 118
Familiar Shape 118
Distorted Room 120
Noninvariance Perceptions 123
S-Motion Demonstration 123
Moon Illusion 127
Summary 130

9 Gibson's Psychophysics—Basic Concepts 131
Psychophysical Correspondence 132
Texture and Optical Texture Gradient 133
Texture 133

Optical Texture 133
The Ground and Perceptual Constancy 138
Distance and the Layout of Space 138
Perceived Size and Distance 138
Size Constancy 140
Intersection of Surfaces 141
Corner 141
Edge 141
Summary 144

10 Lateral or Parallactic Motion 145
Motion Parallax 145
Optic Flow, Velocity Gradients 146
Motion Perspective 148
Dynamic Occlusion 153
Continuous Perspective Transformations 154
Summary 155

11 Motion in Depth 157
The Stimulus 157
Size-Change 157
Expansion/Contraction 159
Apparent Object Motions 162
Kinetic Invariance Hypothesis 162
KIH and Size Constancy 163
Rigidity and the Implicit Scales of Space 164
Movement of Perceiver 165
Heading and Focus of Expansion 165
Time-to-Contact and Time-to-Passage 166
Information for Controlling Activity 167
Visual Kinesthesis 168
Balance and Stance 168
Summary 171

12 Perceived Object Motions 173
Rotating Stimuli 173
Rotating Trapezoidal Window 173
Kinetic Depth Effect 174
Stereokinetic Effect 177
Johansson's Vector Analysis 177
Unity Principle 179
Rigidity Principle 179
Common and Relative Vectors 180
Nonrigid Perceptions: Bending, Folding, and Stretching 183
Computation or Artificial Intelligence Approach 184
Patterns of Deformation: Differential Invariants of Optic Flow 185
Summary 188

13 Detecting Motion 189
Motion in the Frontal Plane 189
Linear Motion Detector 191

Occluded Motion: The Aperture Problem 192
Occluded Motion: Movement-Dependent Subjective Contours 193
Size-Change Detector 194
Expansion/Contraction or Motion-in-Depth Detector 196
Deformation Analysis and Detectors 197
Psychophysical Evidence for Detectors 197
Linear versus Expansion/Contraction 197
Size-Change versus Expansion/Contraction 199
Independence of Expansion/Contraction Detector 200
Linear versus Rotation 202
Direction of Stereomotion in Depth and the V_L/V_R Ratio 202
Summary 203

14 Concluding Thoughts 205
Distal versus Proximal Stimulus 205
Emergent Quality of Perception 205
Global Aspect of Perception 206
Automatic Mechanisms and Cognitive Factors 206

Appendix: Angular Measures 207
