Introduction	1
<b>Part 1. Gohberg and Sigal Theory</b>	<b>5</b>
Chapter 1. Generalized Argument Principle and Rouché's Theorem	7
1.1. Definitions and Preliminaries	8
1.2. Factorization of Operators	11
1.3. Main Results of the Gohberg and Sigal Theory	12
1.4. Concluding Remarks	16
<b>Part 2. Eigenvalue Perturbation Problems and Applications</b>	<b>17</b>
Chapter 2. Layer Potentials	19
2.1. Sobolev Spaces	19
2.2. Layer Potentials for the Laplace Equation	20
2.3. Layer Potentials for the Helmholtz Equation	22
2.4. Integral Representation of Solutions to the Lamé System	28
2.5. Concluding Remarks	33
Chapter 3. Eigenvalue Perturbations of the Laplacian	35
3.1. Eigenvalue Perturbations Due to Small Grounded Inclusions	35
3.2. Eigenvalue Perturbations Due to Conductivity Inclusions	47
3.3. Eigenvalue Perturbations Due to Shape Deformations	54
3.4. Splitting of Multiple Eigenvalues	60
3.5. Reconstruction of Inclusions	61
3.6. Reconstruction of Shape Deformations	68
3.7. Concluding Remarks	74
Chapter 4. Vibration Testing for Detecting Internal Corrosion	77
4.1. Introduction	77
4.2. Formal Derivations	77
4.3. Reconstruction Method	79
4.4. Numerical Results	81
4.5. Justification of the Asymptotic Expansion	84
4.6. Concluding Remarks	89
Chapter 5. Perturbations of Scattering Frequencies of Resonators with Narrow Slits and Slots	91
5.1. Introduction	91
5.2. Perturbations of Scattering Frequencies Due to Narrow Slits	91
5.3. Perturbations of Scattering Frequencies of a Helmholtz Resonator	99

5.4. Concluding Remarks	101
Chapter 6. Eigenvalue Perturbations of the Lamé System	103
6.1. Introduction	103
6.2. Hard Inclusion Case	104
6.3. Transmission Problem	108
6.4. Eigenvalue Perturbations Due to Shape Deformations	115
6.5. Reconstruction of Inclusions	115
6.6. Concluding Remarks	117
<b>Part 3. Photonic and Phononic Band Gaps and Optimal Design</b>	<b>119</b>
Chapter 7. Floquet Transform, Spectra of Periodic Elliptic Operators, and Quasi-Periodic Layer Potentials	121
7.1. Floquet Transform	121
7.2. Structure of Spectra of Periodic Elliptic Operators	122
7.3. Quasi-Periodic Layer Potentials for the Helmholtz Equation	123
7.4. Quasi-Periodic Layer Potentials for the Lamé System	126
7.5. Computations of Periodic Green's Functions	128
7.6. Muller's Method	131
7.7. Concluding Remarks	132
Chapter 8. Photonic Band Gaps	133
8.1. Introduction	133
8.2. Boundary Integral Formulation	134
8.3. Sensitivity Analysis with Respect to the Index Ratio	137
8.4. Photonic Band Gap Opening	146
8.5. Sensitivity Analysis with Respect to Small Perturbations in the Geometry of the Holes	146
8.6. Proof of the Representation Formula	147
8.7. Characterization of the Eigenvalues of $\tilde{\Delta}$	149
8.8. Concluding Remarks	150
Chapter 9. Phononic Band Gaps	153
9.1. Introduction	153
9.2. Asymptotic Behavior of Phononic Band Gaps	155
9.3. Criterion for Gap Opening	171
9.4. Gap Opening Criterion When Densities Are Different	175
9.5. Concluding Remarks	178
Chapter 10. Optimal Design Problems	179
10.1. Introduction	179
10.2. The Acoustic Drum Problem	179
10.3. An Optimal Control Approach in Shape Optimization	184
10.4. Maximizing Band Gaps in Photonic Crystals	186
10.5. Approximate Optimal Design Problems for Photonic Crystals	188
10.6. Concluding Remarks	189
Bibliography	191
Index	201
