

# CONTENTS

<i>Preface</i>	ix
<i>Acknowledgements</i>	xi
<i>Note to the Reader</i>	xii
<b>CHAPTER I. FINITE DETERMINISTIC AUTOMATA</b>	
§ 1. Regular languages	1
§ 2. Analysis and synthesis theorems	6
§ 3. Characteristic equations	17
§ 4. Equivalence relations induced by languages	27
§ 5. Sequential machines	31
§ 6. Experiments and minimization	40
§ 7. Sequential functions and relations	48
§ 8. Definite languages and non-initial automata	53
§ 9. Finite languages	62
§ 10. Two-way automata	67
<b>CHAPTER II. FINITE NON-DETERMINISTIC AND PROBABILISTIC AUTOMATA</b>	
§ 1. Non-deterministic automata	71
§ 2. Probabilistic automata and cut-point representation	73
§ 3. Theorems concerning stochastic languages	78
§ 4. Non-regular stochastic languages	88
§ 5. Probabilistic sequential machines	95
§ 6. Realizability of functions	106
<b>CHAPTER III. ALGEBRA OF REGULAR EXPRESSIONS</b>	
§ 1. Star height	114
§ 2. Solution of equations	120
§ 3. The sets $\mathcal{S}_r$ and $\mathcal{O}_r$ . Languages over a one-letter alphabet	127
§ 4. Languages containing the empty word	131

§ 5. Commutative languages	138
§ 6. Non-existence of a finite basis for the sets $\mathcal{L}$ ,	142
§ 7. Two complete axiom systems	146
§ 8. Operators preserving regularity	160
CHAPTER IV. FORMAL LANGUAGES AND GENERALIZED AUTOMATA	
§ 1. Hierarchy of languages	164
§ 2. Type 3 languages	173
§ 3. Context-free languages	177
§ 4. Inclusion relations	190
§ 5. Pushdown automata	192
§ 6. Context-sensitive languages and linear bounded automata	200
§ 7. Type 0 languages and Turing machines	215
§ 8. Infinite-state machines	220
§ 9. Abstract pushdown automata	224
§ 10. Regular canonical systems	235
<i>Historical and Bibliographical Remarks</i>	243
