

Preface	xi
Acknowledgments	xv
References and Abbreviations	xvii

Part One

Chapter 1 Scepticism and Irrationalism	
1.1 Introduction	3
1.11 Antiseptical Strategies	
1.12 Science as a Language Game	
1.13 The Word 'Knowledge'	
1.14 Scepticism and Doubt	
1.2 An Historical Excursus	13
1.21 Hume's First Principle	
1.22 Do Ibeims exist?	
1.3 The Naturalist Strategy	17
1.31 Deductivism Is Deadly	
1.32 Strawson's Naturalism	
1.33 Scepticism and the Pleasure Principle	
1.34 Scepticism and Fideism	
1.35 Polanyi and Feyerabend	
1.4 The Nondeductivist Strategy	32
1.41 Ayer's Method of Descriptive Analysis	
1.42 The Ineffable Nature of Inductive Proof	
1.5 The Pragmatist Strategy	36
Chapter 2 Probabilism	
2.1 Probabilism versus Personalism	39
2.2 Underlying Ideas	41
2.21 Possible Worlds and Complete Sentences	
2.22 Constituents	
2.23 The Weighting of Constituents	
2.24 Absolute Probabilities	
2.3 Probability-Scepticism and Rationality-Scepticism	58
2.4 A New Argument for Probability-Scepticism	59
2.41 The Nontransitivity of Nondeductive Justifications	
2.42 Requirement of Total Evidence	
2.5 The Probability of Law-Statements	68
2.51 Popper and Carnap: The Zero Probability of Laws	
2.52 Hintikka on the Confirmation of Laws	
2.53 The Weighting of Constituents Again	
Chapter 3 The Inductive Ascent	
3.1 The First Step	79
3.11 A Basis of Certainty?	
3.12 Popper's Glass of Water versus Malcolm's Ink Bottle	

CONTENTS

3.2 The Phenomenalist Strategy	84
3.21 Berkeley on the Creation	
3.22 Carnap's <i>Aufbau</i>	
3.23 Parsimony versus Plenitude	
3.3 The Illegitimacy of Any Inductive Principle	92
3.31 Clifford	
3.32 Transcendental Arguments	
3.33 Keynes	
3.34 Reichenbach	
3.35 Strawson	
3.36 Carnap	
3.37 Peirce	
3.4 Simplicity to the Rescue?	105
3.41 Boltzmann	
3.42 Poincaré	
3.43 Jeffreys	
3.44 Popper versus Jeffreys	
3.5 Review and Prospect	116

Part Two

Chapter 4 The Optimum Aim for Science	
4.1 Adequacy Requirements	123
4.2 The Bacon-Descartes Ideal	126
4.21 A "Progressivised" Version	
4.22 The Bipolarity of the Bacon-Descartes Ideal	
4.3 The Revulsion against Depth	136
4.31 Motives Behind the Antidepth War	
4.32 Mach	
4.33 Duhem	
4.34 Bridgman	
4.35 Schlick's U-Turn	
4.4 Can Scientific Theories Be Cut Down to a Confirmable Size?	144
4.41 Ramsey-Sentences and Deontologisation	
4.42 From Laws to Rules of Inference	
4.43 Nature as the Totality of Sensations	
4.44 The "Next Instance" Thesis	
4.45 Husserl	
4.5 From Certain to Possible Truth	154
4.51 'Accept' and 'Work On'	
4.52 Scepticism and the Semantic Idea of Truth	
4.53 Sense with an Uncertain Reference	
4.54 The Nonempty Demand for Possible Truth	
Chapter 5 The Optimum Aim Elucidated	
5.1 A Comparative Measure of Testable Content	166
5.11 An Antitrivialisation Principle	
5.12 Popper's Criteria for Empirical Content	
5.13 Incongruent Counterparts	
5.14 The Problem of Language Dependence	
5.15 The Comparative Testability Criterion	
5.16 More and Much More	
5.17 Extension to Quantitative Languages	
5.18 The Correspondence Relation	
5.2 Explanatory Depth	188
5.21 Gilbert's Magnetic Theory	
5.22 "Observational" and "Theoretical" Predicates	
5.23 Theoretical Cores	
5.24 Gilbert and Kepler	
5.25 The Fresnel-Maxwell Example	
5.26 Revisionary Reductions	

5.3 Theoretical Unity and Exactitude	203
5.31 When Does a Set of Axioms Constitute a Scientific Theory?	
5.32 The Organic Fertility Requirement	
5.33 Rules for “Natural” Axiomatisations	
5.34 “Kuhn-Loss”	
5.35 Increasing Unity	
5.36 Exactitude	
5.37 Simplicity Again	
5.38 Is Our Aim Coherent?	
 Chapter 6 Deductivism and Statistical Explanation	
6.1 The Challenge from Microphysics	225
6.11 Nondeductive “Explanation”	
6.12 The Question of Detachment	
6.13 Hempel’s Schema	
6.2 Statistical Explanation within Determinist and Indeterminist Settings	231
6.21 The Disintegration Law	
6.22 Future-Independent Properties	
6.3 The Objective Probability of a Future Event	235
6.31 A Comparison with Hempel’s Schema	
6.32 Salmon on Very Low Probabilities	
6.33 Railton’s Deductive-Nomological Model	
6.34 Microphysical Explanations of Macro-events	
6.35 Cutting off the Tails of the Distribution	
 Chapter 7 The Empirical Basis	
7.1 Do We Need an Empirical Basis?	247
7.2 Popper’s Account	249
7.3 The Role of Perceptual Experience	254
7.31 Preconscious Interpretative Processes	
7.32 Perceptions as Explananda	
7.4 “Scientific Facts” and the Duhem-Quine Problem	262
7.41 Poincaré on Crude Facts	
7.42 Duhem on Practical Facts	
7.43 Quine and the Tribunal of Sense Experience	
7.5 Test Statements as Mini-theories	269
7.6 The Responsibility of the Experimenter	273
7.7 The Acceptability of Other People’s Reports	276
 Chapter 8 Corroboration	
8.1 Corroboration and Verisimilitude	279
8.11 Lakatos’s Plea	
8.12 An Inductive Progression	
8.2 Why Corroborations Matter	288
8.21 Background Knowledge	
8.22 Diminishing Returns	
8.23 Strong, Moderate, and Weak Corroborations	
8.24 The Heritability of Corroborations	
8.25 The Zahar-Worrall View	
8.26 Were the Theory’s Fundamental Assumptions Involved?	
8.27 Corroborable Content	
8.3 Is the Best Corroborated Theory Always the Best Theory?	304

CONTENTS

8.4 Are There Paradoxes of Corroboration?	306
8.41 Upwards and Sideways Proliferation Arguments	
8.42 Goodman's Paradox 8.43 "Deoccamisation"	
8.44 Hempel's Paradox	
8.5 The Duhem-Quine Problem Again	319
8.51 Duhem and Manageable Largism 8.52 A Storm in an Ink Pot 8.53 Quinean Holism	
8.6 Are All Scientific Theories Born Refuted?	330
8.7 One-dimensional and Multidimensional Appraisals	335
Chapter 9 Epilogue	337
Bibliography	356
Index of Symbols	381
General Index	383
