

Contents

1. Introduction: Motivation and Summary of the main results	1
1.1. Motivation	1
1.2. Jørgensen's results	2
1.3. Organisation of the paper and the main results	3
1.4. Notation and terminology	4
2. Preliminaries	6
3. Simply connected differential graded algebras	9
3.1. A finite dimensional model	9
3.2. Minimal semi-free resolutions	10
3.3. Jørgensen's results	12
3.4. An amplitude inequality	15
4. The number of Auslander-Reiten components	17
4.1. Preparations for the proof	17
4.1.1. The basic construction	18
4.1.2. Indecomposability	19
4.2. The proof	24
4.3. An example	26
5. Another interpretation of the number of components	28
6. Some open questions	30
6.1. Discrete/wild dichotomy	30
6.2. Topological interpretation	32
6.3. More general differential graded algebras	32
6.3.1. The Gorenstein property	32
6.3.2. The structure of the Auslander-Reiten quiver	33
A. The derived category of a differential graded algebra	36
A.1. Definition of a differential graded algebra and its derived category	36
A.2. Functors	39
A.3. Resolutions and minimality	46
B. Auslander-Reiten theory	48
B.1. The Auslander-Reiten quiver	48
B.2. The functorial approach	50
C. Some topological background	52
C.1. The singular cochain differential graded algebra	52
C.2. Rational homotopy theory	52
