List of Symbols	xiv
Introduction	I
PART I: PHILOSOPHICAL BACKGROUND	
1. Foundations of a Realist Approach	5
1.1 The Existence of Universals	6
1.2 A Realist Construal of Theoretical Terms	13
1.3 Causal and Nomological Concepts: The Need for Analysis	25
1.4 Humean Supervenience	28
1.5 Summary and Overview	31
PART II: LAWS	
2. Laws: The Basic Approach	37
2.1 Some Unsatisfactory Accounts of Laws	43
2.1.1 The Regularity Theory of Laws	43
2.1.2 Laws and Generalized Subjunctive Conditionals	63
2.2 Laws as Relations Among Universals	67
2.3 More Complex Laws	92
3. Difficulties and Objections	106
3.1 Objections	106
3.1.1 Is the Analysis Really Illuminating?	106
3.1.2 Can There Be Contingent Relations Among Universals?	107
3.1.3 Logical Connections Between Distinct States of Affairs?	110
3.1.4 The Question of Transcendent Universals	113
3.1.5 Nomological Statements and Essential Reference to Individuals	120
3.2 Transcendent Universals and the Nature of Laws	123
3.3 The Epistemological Question	129
3.4 Advantages of a Realist Approach	137
4. Probabilistic Laws	142
4.1 The Truth-Makers for Statements Expressing Probabilistic Laws	142

4.2	Probabilistic Laws and Relations Among Universals	148
4.3	The Formal Properties of Probabilistic Laws	160
4.4	Some Advantages of the Present Approach	167
PART III: CAUSATION		
5.	The Basic Issues	173
5.1	Laws and Causal Relations	173
5.2	The Supervenience of Causal Facts upon Non-Causal Facts	175
5.3	The Analysability of Causal Concepts	176
5.4	Causal Order, Priority, and Efficacy	178
5.5	Causation and Time	180
5.6	Causation and Spatiotemporal Continuity	181
5.7	Causal Relations and Probabilistic Laws	181
6	Laws and Causal Relations	183
6.1	The Three Alternatives	183
6.1.1	The Supervenience View	183
6.1.2	The Singularist View	187
6.1.3	A Third Alternative	189
6.2	Two Related Arguments Against the Supervenience View	190
6.2.1	The Causal Theory of Time	190
6.2.2	Identity Over Time in Rotationally Symmetrical Universes	194
6.3	A Third Argument: The Case of Inverted Universes	197
6.4	A Fourth Argument: Indeterministic Laws	199
6.5	The Third Alternative	202
6.6	Summing up	203
7.	The Direction and Asymmetry of Causation	205
7.1	Temporal Priority	205
7.2	Mackie's Account of Causal Priority	216
7.3	Reichenbach's Mark Method	219
7.4	Entropic and Non-entropic Irreversibility	221
7.5	Probabilistic Relations and Causal Priority	228
7.6	Controllability and Causal Priority	239
7.7	Conclusions	243
8.	The Nature of Causation: The Basic Approach	244
8.1	Causation: A Realist Account	244
8.1.1	Causal Realism	244
8.1.2	The Case for Causal Realism	247
8.2	The Underlying Intuition	251

8.3	A Formal Explication	252
8.3.1	Two Alternatives	252
8.3.2	Version One: The Supervenience View	255
8.3.3	Version Two: Causally Bringing About as Basic	265
8.3.4	Version Three: The Intermediate View	268
8.4	Formal Development: I. The Supervenience View	274
8.4.1	The Relation of Direct Causal Necessitation	275
8.4.2	The Ancestral of Direct Causal Necessitation	280
8.4.3	Direct Causal Necessitation: Two Further Properties	284
8.4.4	Causal Laws, Necessary and Sufficient Conditions, and Causal Priority	284
8.5	Formal Development: II. The Intermediate View	287
9.	The Nature of Causation: Further Issues	289
9.1	Causal Relations and Probabilistic Laws	289
9.1.1	Issues and Alternatives	289
9.1.2	Probabilistic Causal Relations and the Supervenience View	291
9.1.3	Probabilistic Causal Relations and the Intermediate View	294
9.2	Epistemological Issues	296
9.2.1	Causal Claims: Direct Evidence and Indirect Evidence	297
9.2.2	Direct Evidence: Apparent Control and Irreversible Processes	299
9.2.3	Indirect Evidence	302
9.3	Causation and Time	304
9.3.1	Two Views of Time: Tensed and Tenseless	304
9.3.2	An Absolute or a Relational Account?	308
9.4	The Case for the Present Approach	312
 PART IV: A SUMMING UP		
10.	Summary and Conclusions	317
	Appendix	325
	Bibliography	336
	Index	341
