

CONTENTS

PREFACE	PAGES
ACKNOWLEDGEMENTS	
1. INTRODUCTION	1-11
1.1. Remote sensing	1-4
1.2. Concept of soil	4-5
1.3. Soil mapping	5-8
1.4. Remote sensing in soil science	8-10
1.5. Conclusions	11
1.6. References	11
1.7. Additional reading	11
2. INTERACTION OF ELECTROMAGNETIC RADIATION WITH MATTER	12-54
2.1. The nature of electromagnetic radiation	12-16
2.2. Radiation laws	16-18
2.3. Solar irradiance and earth emittance	18
2.4. Concepts of matter	19-22
2.5. Atomic-molecular effects on the interaction process; polarization, dielectric constant, refractive index and absorption factor	22-26
2.6. Macroscopic effects on the interaction process; a description using the wave model of EMR	26-36
2.7. Thermal properties	36-40
2.8. Atmospheric effect on EMR	40-45
2.9. Energy balance	45-48
2.10. Spectral reflectance	48-50
2.11. Conclusions	50-52
2.12. References	52-53
2.13. Additional reading	53-54
3. DATA ON INTERACTION OF SHORT WAVE RADIATION WITH NATURAL OBJECTS	55-91
3.1. Interaction of short wave radiation with minerals and rocks	55-60
Spectral reflectance	55-58
Spectral emissivity	58-60
3.2. Interaction of short wave radiation with soils	60-75
Spectral reflectance	60-69
Thermal data	69-75
3.3. Interaction of short wave radiation with plants	75-86
Spectral reflectance	75-83
Thermal properties	83-86
3.4. Implications for remote sensing	86-87
3.5. Conclusions	87-88
3.6. References	88-90
3.7. Additional reading	90-91
4. DETECTION OF ELECTROMAGNETIC RADIATION	93-124
4.1. Human vision	93-101
4.2. Photographic techniques	101-109
4.3. Non-photographic techniques	109-112
4.4. Remote sensing from various platforms	112-115
4.5. The nature of remote sensing data	115-117
4.6. Ground-investigations	117-121
4.7. Conclusions	121-122

VIII

4.8. References	122-123
4.9. Additional reading	123-124
5. PROCESSING OF REMOTE SENSING DATA AND AUTOMATED CLASSIFICATION	125-140
5.1. Technical aspects in processing of photographic imagery	125-131
5.2. Processing of digital data	131-135
5.3. Information extraction process	135-136
5.4. Automated classification	136-138
5.5. Geometrical aspects	138
5.6. Conclusions	138-139
5.7. References	139-140
5.8. Additional reading	140
6. IMAGE CHARACTERISTICS	141-154
6.1. Resolution and scale	141-143
6.2. Grey tone, contrast and colour	143-144
6.3. Airphotos	144-148
6.4. Images derived from line-scanning devices	148-151
6.5. Image-enhancement	151-153
6.6. Conclusions	153-154
6.7. References	154
6.8. Additional reading	154
7. AERIAL PHOTOGRAPHY	155-180
7.1. General aspects	155-162
7.2. Stereoscopy	162-167
7.3. Aerial mapping cameras	167-171
7.4. Photomosaics, orthophotographs and stereotriplets	172
7.5. Requirements for aerial survey	172-174
7.6. True colour aerial photography	174-176
7.7. Infrared aerial photography	176-177
7.8. Multispectral aerial photography	177-178
7.9. Ultraviolet photography	178
7.10. Conclusions	178-179
7.11. References	179-180
7.12. Additional reading	180
8. GENERAL DIRECTIONS FOR PHYSIOGRAPHIC INTERPRETATION OF REMOTE SENSING IMAGERY IN SOIL MAPPING	181-210
8.1. Methods of image-interpretation	182-186
8.2. Landtypes	186-188
8.3. Relief, slope and site	188-192
8.4. Natural drainage patterns	192-200
8.5. Natural vegetation	200-203
8.6. Land use, crops and parcelling	203-205
8.7. Drainage condition	205
8.8. Other aspects	206-208
8.9. Conclusions	209
8.10. References	209
8.11. Additional reading	210
9. INTERPRETATION OF AIRPHOTOS FOR SOIL MAPPING AND LAND EVALUATION	211-245
9.1. Interpretation of black-and-white airphotos	211-219
9.2. The legend of the airphoto-interpretation map	219-222
9.3. From airphoto-interpretation map to soil map	223-226

9.4.	Land evaluation and planning of field survey	226-235
9.5.	Interpretation of true colour airphotos	235
9.6.	Interpretation of black-and-white Infrared airphotos	235
9.7.	Interpretation of false colour airphotos	236-239
9.8.	Application of multispectral photography	239-240
9.9.	Interpretation of sequential aerial photography	240-241
9.10.	Conclusions	241-242
9.11.	References	242-243
9.12.	Additional reading	243-245
10.	AIRBORNE LINE-SCANNING IN THE 0.3 - 8 μm ZONE	246-255
10.1.	Airborne line-scanners	246-248
10.2.	Detection in the Ultraviolet	248-249
10.3.	Detection in the Visible zone and near Infrared	249-253
10.4.	Detection in the mid Infrared	253
10.5.	Conclusions	253
10.6.	References	254
10.7.	Additional reading	254-255
11.	REMOTE SENSING FROM SPACE IN THE 0.3 - 3 μm ZONE	256-287
11.1	Manned space missions and unmanned satellites	256-258
11.2.	Technical aspects Landsat	258-264
11.3.	Annotations Landsat MSS imagery	264-266
11.4.	Processing and interpretation of Landsat MSS data.	266-281
11.5.	Interpretation of Thematic Mapper (TM) data	281-284
11.6.	Application	284
11.7.	Conclusions and comments	284-285
11.8.	References	285-287
11.9.	Additional reading	287
12.	THERMAL INFRARED LINE-SCANNING AND RADIOMETRY IN THE INFRARED AND MICRO-WAVE ZONES	288-314
12.1.	Airborne Infrared line-scanners and Infrared imagers	289
12.2.	Satellite programs	289-291
12.3.	Characteristics of airborne thermal Infrared imagery	291-295
12.4.	Thermal models	295-300
12.5.	Interpretation of thermal data	300-305
12.6.	Application of thermal Infrared line scanning.	305-306
12.7.	Non-imaging sensing in the Infrared and passive Microwave sensing	306-309
12.8.	Conclusions	309
12.9.	References	309-311
12.10	Additional reading	311-313
13.	ACTIVE SENSOR SYSTEMS	314-354
13.1.	Laser systems	314-315
13.2.	Radar systems	315-323
13.3.	Interaction of Microwaves with objects at the earth surface	323-332
	Surface roughness	323-324
	Slope/orientation	325
	Dielectric properties	325-329
	Determination of soil moisture	329-332
13.4.	Ground penetrating radar	332-334
13.5.	Vegetation backscattering	334-335
13.6.	Radar image characteristics	335-339

X

13.7.	Interpretation of radar imagery	339-346
13.8	Remote sensing with radio waves	347-348
13.9.	Applications and future developments	348-350
13.10	Conclusions	350-351
13.11	References	351-353
13.12	Additional reading	353-354
14.	IMPLICATIONS OF REMOTE SENSING	355-370
14.1.	Summary on applications	355-356
14.2.	Land evaluation	356-357
14.3.	Methodology	357-360
14.4.	Recent and future developments	360-366
14.5.	Political and legal considerations	366-367
14.6.	Education and training	367-369
14.7.	References	369-370
14.8.	Additional reading	370
