CONTENTS

Preface xiii

Acknowledgements xv

PART I BASIC TECHNIQUES

1 Images and Digital Processing 3

Introduction *3*
The Elements of Digital Image Processing *4*
Some Philosophical Considerations *9*
Digital Image Processing in Practice *11*

2 Digitizing Images 14

Introduction *14*
Characteristics of an Image Digitizer *15*
Types of Image Digitizers *16*
Image Digitizing Components *17*
Electronic Image Tubes *26*
Other Digitizing Systems *30*
Film Scanning *31*
Bibliography *38*

3 Digital Image Display 39

Introduction *39*
Display Characteristics *40*
Display Technologies *49*
Bibliography *51*

4 Image Processing Software 52

Introduction *52*
Software Organization *53*
The Processing Sequence *57*
References *67*

5 The Gray Level Histogram 68

Introduction *68*
Uses of the Histogram *73*
Relationship Between Histogram and Image *78*
Summary of Important Points *83*
References *83*

6 Point Operations 84

Introduction *84*
Uses for Point Operations *85*
Linear Point Operations *86*
Point Operations and the Histogram *86*
Applications of Point Operations *90*
Summary of Important Points *94*

7 Algebraic Operations 96

Introduction *96*
Algebraic Operations and the Histogram *97*
Applications of Algebraic Operations *101*
Summary of Important Points *108*

8 Geometric Operations 110

Introduction *110*
Gray Level Interpolation *112*
The Spatial Transformation *115*
Applications of Geometric Operations *119*
Summary of Important Points *134*
References *135*

PART II LINEAR FILTERING

9 Linear System Theory 139

Introduction *139*
Harmonic Signals and Complex Signal Analysis *141*
The Convolution Operation *145*
Applications of Digital Filtering *150*
Some Useful Functions *150*
Convolution Filtering *156*
Conclusion *159*
Summary of Important Points *159*
References *160*

10 The Fourier Transform 161

Introduction *161*
Properties of the Fourier Transform *166*
Linear Systems and the Fourier Transform *173*
The Fourier Transform in Two Dimensions *180*
Correlation and the Power Spectrum *186*
Summary of Fourier Transform Properties *187*
Summary of Important Points *187*
References *189*

11 Filter Design 190

Introduction *190*
Examples of Common Filters *190*
Optimal Filter Design *199*
Summary of Important Points *224*
References *225*

12 Processing Sampled Data 226

Introduction *226*
Sampling *227*
Computing Spectra *234*
Truncation *238*
The Effects of Digital Processing *240*
Digital Filtering *246*
Summary of Important Points *248*
References *249*

13 Optics and System Analysis 250

Introduction *250*
Optics and Imaging Systems *251*
Diffraction-limited Optical Systems *254*
Aberrations in an Imaging System *262*
The Analysis of Complete Systems *264*
Summary of Important Points *273*
References *274*

PART III APPLICATIONS

14 Image Restoration 277

Introduction *277*
Approaches and Models *278*
Superresolution *288*
System Identification *290*
OTF from the Degraded Image Spectrum *292*
Noise Modeling *293*
Summary of Important Points *295*
References *295*

15 **Image Segmentation 299**

Introduction *299*
Image Segmentation by Thresholding *303*
Optimal Threshold Selection *305*
Gradient Based Methods *311*
Region Growing Techniques *313*
Segmented Image Structure *314*
Summary of Important Points *319*
References *319*

16 **Measurement and Classification 321**

Introduction *321*
Size Measurements *323*
Shape Measurements *324*
Feature Selection *332*
Classification *334*
Summary of Important Points *344*
References *345*

17 **Three-Dimensional Image Processing 347**

Introduction *347*
Multispectral Analysis *350*
Optical Sectioning *351*
Computerized Axial Tomography *360*
Stereometric Ranging *364*
Stereoscopic Image Display *368*
Shaded Surface Display *371*
Summary of Important Points *377*
References *379*

APPENDICES

I **A History of Digital Image Processing at JPL 383**

II **VICAR Program Index 401**

III **Fourier Transforms 412**

IV **Function Tables 418**

Index 421
