Contents

1 Introduction 1
- 1.1 Historical remarks . . . 1
- 1.2 On inequalities for higher derivatives . . . 3
- 1.3 On methods . . . 5
- 1.4 Survey of the contents . . . 6

2 Basic coefficient inequalities 7
- 2.1 Subordinate functions . . . 7
- 2.2 Bieberbach's conjecture by de Branges . . . 11
- 2.3 Theorems of Jenkins and Sheil-Small . . . 15
- 2.4 Inverse coefficients . . . 18
- 2.5 Domains with bounded boundary rotation . . . 23

3 The Poincaré metric 27
- 3.1 Background . . . 27
- 3.2 The Schwarz-Pick inequality . . . 30
- 3.3 Estimates using the Euclidean distance . . . 33
- 3.4 An application of Teichmüller's theorem . . . 37
- 3.5 Domains with uniformly perfect boundary . . . 40
- 3.6 Derivatives of the conformal radius . . . 44

4 Basic Schwarz-Pick type inequalities 49
- 4.1 Two classical inequalities . . . 50
- 4.2 Theorems of Ruscheweyh and Yamashita . . . 52
- 4.3 Pairs of simply connected domains . . . 55
- 4.4 Holomorphic mappings into convex domains . . . 59
- 4.5 Punishing factors for convex pairs . . . 63
- 4.6 Case $n = 2$ for all domains . . . 66

5 Punishing factors for special cases 69
- 5.1 Solution of the Chua conjecture . . . 69
- 5.2 Punishing factors for angles . . . 72

5.3 Sharp lower bounds for punishing factors 78
5.4 Domains in the extended complex plane 84
5.5 Maps from convex into concave domains 90

6 Multiply connected domains **97**
6.1 Finitely connected domains 97
6.2 Pairs of arbitrary domains 104
6.3 Some examples 108

7 Related results **113**
7.1 Inequalities for schlicht functions 113
7.2 Derivatives of α-invariant functions 117
7.3 A characterization of convex domains 124

8 Some open problems **127**
8.1 The Krzyż conjecture 127
8.2 The angle conjecture 128
8.3 The generalized Goodman conjecture 131
8.4 Bloch and several variable problems 139
8.5 On sums of inverse coefficients 140
