|---------------|-----|
| Preface | VII |
|---------------|-----|

Chapter 1: Introduction

| | | |
|-----|--|---|
| 1.1 | Definition and Scope | 1 |
| 1.2 | Development of Remote Sensing | 1 |
| 1.3 | Fundamental Principle | 2 |
| 1.4 | A Typical Remote Sensing Programme | 3 |
| 1.5 | Advantages and Limitations | 3 |
| 1.6 | Organization of this Book | 6 |

Chapter 2: Physical Principles

| | | |
|-------|---|----|
| 2.1 | The Nature of EM Radiation | 7 |
| 2.2 | Radiation Principles and Sources | 7 |
| 2.2.1 | Radiation Terminology | 7 |
| 2.2.2 | Blackbody Radiation Principles | 8 |
| 2.2.3 | Electromagnetic Spectrum | 9 |
| 2.2.4 | Energy Available for Sensing | 9 |
| 2.3 | Atmospheric Effects | 10 |
| 2.3.1 | Atmospheric Scattering | 11 |
| 2.3.2 | Atmospheric Absorption | 11 |
| 2.3.3 | Atmospheric Emission | 12 |
| 2.4 | Energy Interaction Mechanisms on Ground | 12 |
| 2.4.1 | Reflection Mechanism | 13 |
| 2.4.2 | Transmission Mechanism | 14 |
| 2.4.3 | Absorption Mechanism | 14 |
| 2.4.4 | Earth's Emission | 15 |

Section A: Optical Range

Chapter 3: Spectra of Minerals and Rocks

| | | |
|-------|--|----|
| 3.1 | Spectral Response and Spectral Signature | 19 |
| 3.2 | Basic Arrangements of Laboratory Spectral Data Collection and Terminology | 19 |
| 3.3 | Atomic Molecular Processes in Solids Leading to Features in Spectra | 21 |
| 3.3.1 | Basic Types of Energy State Transitions and Their Appearance in the EM Spectrum | 21 |
| 3.3.2 | Electronic Processes | 22 |
| 3.3.3 | Vibrational Processes | 23 |
| 3.4 | Spectra of Common Ionic-Constituents in Different Parts of the EM Spectrum | 23 |
| 3.4.1 | Visible and Near-Infrared Region (0.4–1.0 μ) | 23 |
| 3.4.2 | SWIR Region (1–3 μ) | 23 |
| 3.4.3 | Thermal Infrared Region | 25 |
| 3.5 | Spectra of Minerals | 26 |
| 3.6 | Spectra of Rocks | 28 |
| 3.6.1 | VNIR and SWIR Regions | 28 |
| 3.6.2 | Thermal Infrared Region | 30 |
| 3.7 | Laboratory vs. Field Spectra | 30 |
| 3.8 | Spectra of Other Common Natural Objects | 31 |
| 3.9 | Methods of in-Situ Spectral Measurement | 33 |
| 3.10 | Future | 34 |

Chapter 4: Photography

| | | |
|-------|---|----|
| 4.1 | Introduction | 35 |
| 4.1.1 | Relative Merits and Limitations | 35 |
| 4.1.2 | Working Principle | 36 |
| 4.2 | Cameras | 37 |
| 4.2.1 | Single Frame Conventional Cameras | 37 |
| 4.2.2 | Panoramic Cameras | 39 |
| 4.2.3 | Strip Cameras | 39 |
| 4.2.4 | Multiband Cameras | 39 |
| 4.3 | Films | 40 |
| 4.3.1 | Black-and-White Films | 40 |
| 4.3.2 | Colour Films | 43 |
| 4.4 | Filters | 47 |
| 4.4.1 | Anti-Vignetting Filter | 47 |
| 4.4.2 | Long Wavelength Pass Filter | 48 |
| 4.4.3 | Band Pass Filter | 48 |
| 4.5 | Film-Filter Combinations for Spectrozoal Photography | 48 |
| 4.6 | Vertical and Oblique Photography | 49 |
| 4.7 | Photographic Resolution | 50 |
| 4.8 | Photographic Missions | 50 |

Chapter 5: Imaging Systems and Radiometers

| | | |
|-------|--|----|
| 5.1 | Introduction | 55 |
| 5.1.1 | General Working Principle and Components | 55 |
| 5.1.2 | Relative Merits | 57 |
| 5.2 | Energy Reaching the Sensor (Signal-to-Noise Ratio Considerations) | 57 |
| 5.3 | Non-Imaging Sensors (Radiometers and Spectroradiometers) | 59 |
| 5.3.1 | Terminology | 59 |
| 5.3.2 | Design and Working Principle | 59 |
| 5.4 | Imaging Sensors (Scanning Systems) | 61 |
| 5.4.1 | What is an Image? | 61 |
| 5.4.2 | Imaging Tubes (Vidicons) | 61 |
| 5.4.3 | Optical-Mechanical Line Scanner (Whiskbroom Scanner) | 62 |
| 5.4.4 | CCD Linear Array Scanner (Pushbroom Scanner) | 63 |
| 5.4.5 | Imaging Spectrometer | 66 |
| 5.5 | Spaceborne Imaging Sensors | 68 |
| 5.5.1 | Landsat Programme | 68 |
| 5.5.2 | SKYLAB | 73 |
| 5.5.3 | HCMM | 73 |
| 5.5.4 | SPOT Series | 74 |
| 5.5.5 | IRS-LISS Sensor | 74 |
| 5.5.6 | MOS-1 | 74 |
| 5.5.7 | MOMS-1 | 76 |
| 5.5.8 | Future Space Sensors | 77 |
| 5.6 | Products from Scanner Data | 78 |

Chapter 6: Geometric Aspects of Photographs and Images

| | | |
|-------|---|----|
| 6.1 | Geometric Distortions | 81 |
| 6.1.1 | Distortions Related to Sensor Systems | 82 |
| 6.1.2 | Distortions Related to Sensorcraft Altitude and Perturbations | 84 |
| 6.1.3 | Distortions Related to Earth's Shape and Spin | 86 |
| 6.2 | Stereoscopy | 87 |
| 6.2.1 | Principle | 87 |
| 6.2.2 | Vertical Exaggeration | 88 |
| 6.2.3 | Aerial and Spaceborne Configurations for Stereo-Coverages | 88 |
| 6.2.4 | Photography vis-a-vis Scanner Imagery for Stereoscopy | 89 |
| 6.2.5 | Instrumentation for Stereo-Viewing | 89 |
| 6.3 | Photogrammetry | 90 |
| 6.3.1 | Measurements on Photographs | 91 |
| 6.3.2 | Measurements on Images | 93 |
| 6.3.3 | Aerial vis-a-vis Satellite Photogrammetry | 94 |
| 6.4 | Transfer of Planimetric Details and Mapping | 94 |

Chapter 7: Image Quality and Principles of Interpretation

| | | |
|-------|--|-----|
| 7.1 | Image Quality | 97 |
| 7.1.1 | Ground Properties | 97 |
| 7.1.2 | Environmental Factors | 97 |
| 7.1.3 | Sensor System Factors | 99 |
| 7.2 | Handling of Photographs and Images | 101 |
| 7.2.1 | Indexing | 101 |
| 7.2.2 | Mosaics | 101 |
| 7.2.3 | Scale Manipulation | 102 |
| 7.2.4 | Stereo-Viewing | 102 |
| 7.2.5 | Combining Multispectral Products | 102 |
| 7.3 | Fundamentals of Interpretation | 104 |
| 7.3.1 | Elements of Photo-Interpretation | 104 |
| 7.3.2 | Geotechnical Elements | 105 |
| 7.4 | Applications | 107 |

Chapter 8: Interpretation of Data in the Solar Reflection Region

| | | |
|-------|---|-----|
| 8.1 | Introduction | 109 |
| 8.2 | Energy Budget Considerations for Sensing in the SOR Region | 109 |
| 8.2.1 | Attitude of the Sun | 109 |
| 8.2.2 | Atmospheric-Meteorological Conditions | 111 |
| 8.2.3 | Topography and Slope Aspect | 111 |
| 8.2.4 | Target Reflectance | 111 |
| 8.3 | Acquisition of Data in the Solar Reflection Region | 112 |
| 8.4 | Processing of Solar Reflection Image Data | 113 |
| 8.5 | Interpretation | 113 |
| 8.5.1 | Interpretation of Panchromatic Black-and-White Products | 114 |
| 8.5.2 | Interpretation of Multispectral Products | 115 |
| 8.5.3 | Interpretation of CIR Film and Standard FCCs | 116 |
| 8.5.4 | Interpretation of Data from High-Spectral Resolution Sensors | 121 |
| 8.6 | Luminex Method | 122 |
| 8.7 | Scope for Geological Applications | 122 |

Chapter 9: Interpretation of Data in the Thermal Infrared Region

| | | |
|-------|---|-----|
| 9.1 | Introduction | 125 |
| 9.2 | Earth's Radiant Energy – Basic Considerations | 126 |
| 9.2.1 | Factors Governing Ground Surface Kinetic Temperature | 126 |
| 9.2.2 | Emissivity | 129 |
| 9.2.3 | Radiant Temperature – Its Concept and Measurement | 130 |
| 9.3 | Broad-Band Thermal Sensing and Data Interpretation | 131 |
| 9.3.1 | Acquisition of Broad-Band Thermal Data | 131 |
| 9.3.2 | Processed and Unprocessed TIR Images | 133 |
| 9.3.3 | Interpretation of Thermal (Radiant Temperature) Imagery – Common Responses | 133 |

| | | |
|-------|---|-----|
| 9.3.4 | Thermal Inertia Mapping and Data Interpretation | 136 |
| 9.3.5 | Scope for Geological Applications – Broad-Band Thermal Sensing | 137 |
| 9.4 | Multispectral TIR Sensing or Spectral Emissivity Approach | 141 |
| 9.4.1 | Spectral Considerations and Potential | 141 |
| 9.4.2 | Data Processing and Enhancement | 142 |
| 9.4.3 | Scope for Geological Applications | 144 |
| 9.5 | LIDAR Sensing | 144 |
| 9.5.1 | LIDAR Sensing – Working Principle | 144 |
| 9.5.2 | Scope for Geological Applications | 144 |
| 9.6 | Future | 146 |

Section B: Microwave Range

Chapter 10: Microwave Sensors

| | | |
|--------|--|-----|
| 10.1 | Introduction | 149 |
| 10.2 | Passive Microwave Sensors and Radiometry | 149 |
| 10.2.1 | Principle | 149 |
| 10.2.2 | Measurement and Interpretation | 150 |
| 10.3 | Active Microwave Sensors – Imaging Radars | 151 |
| 10.3.1 | What is a Radar? | 151 |
| 10.3.2 | Side-Looking Airborne Radar (SLAR) Configuration | 152 |
| 10.3.3 | Spatial Positioning and Ground Resolution from SLAR Data | 154 |
| 10.3.4 | SLAR System Specifications | 156 |
| 10.3.5 | Aerial and Space SLAR Sensors | 157 |
| 10.4 | Future | 157 |

Chapter 11: Interpretation of SLAR Imagery

| | | |
|--------|---|-----|
| 11.1 | Introduction | 161 |
| 11.2 | SLAR Image Characteristics | 161 |
| 11.2.1 | Radiometric Characters – Typical Responses on SLAR Imagery | 161 |
| 11.2.2 | Geometric Characteristics | 163 |
| 11.3 | Radar Return | 166 |
| 11.3.1 | Radar Equation | 166 |
| 11.3.2 | Effect of Radar System Factors | 167 |
| 11.3.3 | Effect of Ground Factors | 168 |
| 11.4 | Processed and Unprocessed SLAR Image Data | 172 |
| 11.5 | Interpretation | 173 |
| 11.5.1 | Photo-Interpretation Elements | 173 |
| 11.5.2 | Geotechnical Elements | 174 |
| 11.6 | Scope for Geological Applications | 175 |

Section C: Data Processing, Integration and Applications

Chapter 12: Digital Image Processing

| | | |
|--------|--|-----|
| 12.1 | Introduction | 183 |
| 12.1.1 | What is Digital Imagery? | 183 |
| 12.1.2 | Sources of Image Data | 183 |
| 12.1.3 | Storage and Supply of Imagery | 183 |
| 12.1.4 | Data Computer Compatible Tapes | 184 |
| 12.1.5 | Objectives of Digital Image Processing | 185 |
| 12.2 | Image Correction | 186 |
| 12.2.1 | Radiometric Corrections | 187 |
| 12.2.2 | Geometric Corrections | 189 |
| 12.3 | Image Registration | 190 |
| 12.3.1 | Definition and Importance | 190 |
| 12.3.2 | Principle | 191 |
| 12.3.3 | Procedure | 191 |
| 12.4 | Image Enhancement | 193 |
| 12.4.1 | Single Image Manipulation | 193 |
| 12.4.2 | Multiple Image Enhancement | 200 |
| 12.4.3 | Enhancement by Using Colours | 210 |
| 12.4.4 | Synthetic Stereo | 212 |
| 12.5 | Image Segmentation | 213 |
| 12.6 | Digital Image Classification | 214 |
| 12.6.1 | Supervised Classification | 215 |
| 12.6.2 | Unsupervised Classification | 219 |
| 12.6.3 | Scope for Geological Applications | 219 |
| 12.7 | Image Processing Systems | 220 |

Chapter 13: Geological Applications

| | | |
|--------|-----------------------------------|-----|
| 13.1 | Introduction | 223 |
| 13.2 | Geomorphology | 225 |
| 13.2.1 | Tectonic Landforms | 226 |
| 13.2.2 | Volcanic Landforms | 226 |
| 13.2.3 | Fluvial Landforms | 226 |
| 13.2.4 | Coastal and Deltaic Landforms | 228 |
| 13.2.5 | Aeolian Landforms | 230 |
| 13.2.6 | Glacial Landforms | 232 |
| 13.3 | Structure | 232 |
| 13.3.1 | Bedding and Simple-Dipping Strata | 234 |
| 13.3.2 | Folds | 235 |
| 13.3.3 | Faults | 241 |
| 13.3.4 | Neovolcanic Rift Zone | 243 |
| 13.3.5 | Lineaments | 245 |
| 13.3.6 | Circular Features | 252 |
| 13.3.7 | Intrusives | 255 |
| 13.3.8 | Unconformity | 255 |

| | | |
|---------|---|-----|
| 13.4 | Lithology | 255 |
| 13.4.1 | General | 255 |
| 13.4.2 | Sedimentary Rocks | 255 |
| 13.4.3 | Igneous Rocks | 257 |
| 13.4.4 | Metamorphic Rocks | 262 |
| 13.4.5 | Mixed Terrains | 265 |
| 13.5 | Stratigraphic Order and Age Relations | 268 |
| 13.6 | Mineral Exploration | 269 |
| 13.6.1 | Role of Remote Sensing in Mineral Resources Exploration | 269 |
| 13.6.2 | Main Types of Mineral Deposits | 270 |
| 13.6.3 | Geological Guides for Prospecting and Their Manifestation in Remote Sensing Data | 270 |
| 13.7 | Petroleum Exploration | 280 |
| 13.8 | Groundwater Investigations | 282 |
| 13.8.1 | Factors Affecting Groundwater Occurrence | 282 |
| 13.8.2 | Indicators for Groundwater on Remote Sensing Data Products | 283 |
| 13.8.3 | Application Examples | 283 |
| 13.9 | Engineering Geological Investigations | 290 |
| 13.9.1 | River Valley Projects – Dams and Reservoirs | 290 |
| 13.9.2 | Landslides | 291 |
| 13.9.3 | Route Location (Highways and Railroads) and Canal and Pipeline Alignments | 293 |
| 13.9.4 | Neotectonism and Seismic Hazard Evaluation | 293 |
| 13.10 | Volcanic and Geothermal Energy Applications | 299 |
| 13.11 | Environmental Applications | 301 |
| 13.11.1 | Land Use | 302 |
| 13.11.2 | Soil Erosion | 303 |
| 13.11.3 | Atmospheric Pollution | 304 |
| 13.11.4 | Nuclear Power Plants | 305 |
| 13.11.5 | Vegetation | 305 |
| 13.12 | Geodynamic Applications | 307 |
| 13.12.1 | Very Long Baseline Interferometry (VLBI) | 307 |
| 13.12.2 | Satellite Laser Ranging (SLR) | 308 |

Chapter 14: Integrating Remote Sensing Data With Other Geodata (GIS Approach)

| | | |
|--------|--|-----|
| 14.1 | Integrated Multidisciplinary Geoinvestigations | 311 |
| 14.1.1 | Importance | 311 |
| 14.1.2 | Advantages and Limitations of Combining Multidata Sets | 311 |
| 14.1.3 | Scope of the Present Discussion | 312 |
| 14.2 | Geographic Information System | 313 |
| 14.3 | Sources of Geodata in GIS | 313 |
| 14.3.1 | Remote Sensing Spectral Data | 313 |
| 14.3.2 | Geophysical Data | 313 |
| 14.3.3 | Gamma Radiation Data | 315 |
| 14.3.4 | Geochemical Data | 315 |
| 14.3.5 | Geological Data | 316 |
| 14.3.6 | Topographical Data | 316 |

| | | |
|---------------------------------------|---|------------|
| 14.3.7 | Other Thematic Data | 316 |
| 14.4 | Types of Attributes and Measurement Scales in Multidata Sets | 316 |
| 14.5 | Generating Image-Based GIS | 317 |
| 14.5.1 | Acquisition of Collateral Data | 317 |
| 14.5.2 | Construction of Digital Imagery | 317 |
| 14.5.3 | Registration | 320 |
| 14.6 | Integrated Interpretation | 322 |
| 14.6.1 | Quantitative Interpretation | 323 |
| 14.6.2 | Qualitative Interpretation | 324 |
| 14.7 | Remote Sensing in Geoexploration Panorama | 326 |
| 14.8 | Future | 329 |
| Appendices | | 331 |
| References | | 337 |
| Illustrations – Location Index | | 349 |
| Subject Index | | 351 |
