Preface	page ix
<b>Overview</b>	
The ethics movement in the biological sciences: A new voyage of discovery <i>Stanley J. Reiser</i>	1
<b>Part I The conceptual and social foundations of science</b>	
Introduction	17
1 Science <i>Silvano Arieti</i>	19
2 Scientific basis for the support of biomedical science <i>Julius H. Comroe, Jr. and Robert D. Dripps</i>	27
Questions for discussion and supplemental reading	40
<b>Part II The roots of honor and integrity in science</b>	
Introduction	41
3 The ethical basis of science <i>Bentley Glass</i>	43
4 Making and breaking the rules of science <i>Alexander Kohn</i>	56
Questions for discussion and supplemental reading	63
<b>Part III Self-deception in research: Procedural, perceptual, and social causes</b>	
Introduction	65
5 Resistance by scientists to scientific discovery <i>Bernard Barber</i>	67

6	Self-deception and gullibility <i>William Broad and Nicholas Wade</i>	80
	Questions for discussion and supplemental reading	92
<b>Part IV The responsible conduct of biological research</b>		
	Introduction	93
7	The pathogenesis of fraud in medical science <i>Robert G. Petersdorf</i>	95
8	Pressure to publish and fraud in science <i>Patricia K. Woolf</i>	99
9	Science, statistics, and deception <i>John C. Bailar III</i>	103
10	Methods, definitions, and basic assumptions <i>Panel on Scientific Responsibility and the Conduct of Research, National Academy of Sciences</i>	106
	Questions for discussion and supplemental reading	114
<b>Part V The ethics of authorship and publication</b>		
	Introduction	115
11	An ethical code for scientists <i>Ward Pigman and Emmett B. Carmichael</i>	117
12	Guidelines on authorship <i>International Committee of Medical Journal Editors</i>	125
13	Peer and/or peerless review: Some vagaries of the editorial process <i>Arthur E. Baue</i>	127
14	Irresponsible authorship and wasteful publication <i>Edward J. Huth</i>	134
15	Reporting provocative results: Can we publish “hot” papers without getting burned? <i>James L. Mills</i>	138
	Questions for discussion and supplemental reading	142
<b>Part VI Research with human subjects</b>		
	Introduction	143
16	The Nuremberg Code	145
17	Clinical investigations using human subjects <i>U.S. Public Health Service, Division of Research Grants</i>	147

18	False hopes and best data: Consent to research and the therapeutic misconception	150
	<i>Paul S. Appelbaum, Loren H. Roth, Charles W. Lidz, Paul Benson, and William Winslade</i>	
19	Declaration of Helsinki: Recommendations guiding physicians in biomedical research involving human subjects	159
	<i>World Medical Association</i>	
20	Wanted: Single, white male for medical research	162
	<i>Rebecca Dresser</i>	
	Questions for discussion and supplemental reading	172
<b>Part VII The use of animals in biological research</b>		
	Introduction	173
21	Beastly conduct: Ethical issues in animal experimentation	175
	<i>Arthur L. Caplan</i>	
22	Use of animals in experimental research: A scientist's perspective	186
	<i>Ruth Ellen Bulger</i>	
	Questions for discussion and supplemental reading	197
<b>Part VIII The work of the academic scientist</b>		
	Introduction	199
23	Guidelines for investigators in scientific research	201
	<i>Harvard University, Faculty of Medicine</i>	
24	Guidelines for the conduct of research at the National Institutes of Health	204
25	Reminder and update: Requirement for programs on the responsible conduct of research in National Research Service Award institutional training programs	210
	<i>National Institutes of Health; Alcohol, Drug Abuse, and Mental Health Administration</i>	
26	Enlarging the perspective	212
	<i>Ernest L. Boyer</i>	
	Questions for discussion and supplemental reading	219
<b>Part IX The scientist and industry: Conflicts of interest and conflicts of commitment</b>		
	Introduction	221
27	Sharing research data	223
	<i>Duncan Neuhauser</i>	

28	University-industry research relationships in biotechnology: Implications for the university	225
	<i>David Blumenthal, Michael Gluck, Karen Seashore Louis, Michael A. Stoto, and David Wise</i>	
29	Public money, private gain, profit for all	237
	<i>Loren E. Lomasky</i>	
30	Patenting life: Summary, policy issues, and options for congressional action	242
	<i>U.S. Office of Technology Assessment</i>	
31	New opportunities create new problems	251
	<i>Association of Academic Health Centers</i>	
	Questions for discussion and supplemental reading	260
<b>Part X The scientist in society: Interactions, expectations, and obligations</b>		
	Introduction	261
32	Summary statement of the Asilomar Conference on Recombinant DNA Molecules	263
	<i>Paul Berg, David Baltimore, Sydney Brenner, Richard O. Roblin III, and Maxine F. Singer</i>	
33	The high cost of hype	270
	<i>Dorothy Nelkin</i>	
34	Due process for dissent	278
	<i>Frank von Hippel and Rosemary Chalk</i>	
35	Ethical issues in human genome research	283
	<i>Thomas H. Murray</i>	
	Questions for discussion and supplemental reading	294
