Contents

1.	Introduction to the theory of Boolean functions and circuits	1
1.1	Introduction	1
1.2	Boolean functions, laws of computation, normal forms	3
1.3	Circuits and complexity measures	6
1.4	Circuits with bounded fan-out	10
1.5	Discussion	15
	Exercises	19
2.	The minimization of Boolean functions	22
2.1	Basic definitions	22
2.2	The computation of all prime implicants and reductions of the table of prime implicants	25
2.3	The minimization method of Karnaugh	29
2.4	The minimization of monotone functions	31
2.5	The complexity of minimizing	33
2.6	Discussion	35
	Exercises	36
3.	The design of efficient circuits for some fundamental functions	39
3.1	Addition and subtraction	39
3.2	Multiplication	51
3.3	Division	67
3.4	Symmetric functions	74
3.5	Storage access	76
3.6	Matrix product	78
3.7	Determinant	81
	Exercises	83

4.	Asymptotic results and universal circuits	87
4.1	The Shannon effect	87
4.2	Circuits over complete bases	88
4.3	Formulas over complete bases	93
4.4	The depth over complete bases	96
4.5	Monotone functions	98
4.6	The weak Shannon effect	106
4.7	Boolean sums and quadratic functions	107
4.8	Universal circuits	110
	Exercises	117
5.	Lower bounds on circuit complexity	119
5.1	Discussion on methods	119
5.2	2 n - bounds by the elimination method	122
5.3	Lower bounds for some particular bases	125
5.4	2.5 n - bounds for symmetric functions	127
5.5	A 3n - bound	133
5.6	Complexity theory and lower bounds on circuit complexity	138
	Exercises	142
6.	Monotone circuits	145
6.1	Introduction	145
6.2	Design of circuits for sorting and threshold functions	148
6.3	Lower bounds for threshold functions	154
6.4	Lower bounds for sorting and merging	158
6.5	Replacement rules	160
6.6	Boolean sums	163
6.7	Boolean convolution	168
6.8	Boolean matrix product	170
6.9	A generalized Boolean matrix product	173
6.10	Razborov's method	180
6.11	An exponential lower bound for clique functions	184
6.12	Other applications of Razborov's method	192

6.13	Negation is powerless for slice functions	195
6.14	Hard slices of NP-complete functions	203
6.15	Set circuits - a new model for proving lower bounds	207
	Exercises	214
7.	Relations between circuit size, formula size and depth	218
7.1	Formula size vs. depth	218
7.2	Circuit size vs. formula size and depth	221
7.3	Joint minimization of depth and circuit size, trade-offs	225
7.4	A trade-off result	229
	Exercises	233
8.	Formula size	235
8.1	Threshold - 2	235
8.2	Design of efficient formulas for threshold - k	239
8.3	Efficient formulas for all threshold functions	243
8.4	The depth of symmetric functions	247
8.5	The Hodes and Specker method	249
8.6	The Fischer, Meyer and Paterson method	251
8.7	The Nechiporuk method	253
8.8	The Krapchenko method	258
	Exercises	263
9.	Circuits and other non uniform computation methods vs. Turing machines and other uniform computation models	267
9.1	Introduction	267
9.2	The simulation of Turing machines by circuits: time and size	271
9.3	The simulation of Turing machines by circuits: space and depth	277
9.4	The simulation of circuits by Turing machines with oracles	279
9.5	A characterization of languages with polynomial circuits	282
9.6	Circuits and probabilistic Turing machines	285

9.7	May NP-complete problems have polynomial circuits ?	288
9.8	Uniform circuits	292
	Exercises	294
10.	Hierarchies, mass production and reductions	296
10.1	Hierarchies	296
10.2	Mass production	301
10.3	Reductions	306
	Exercises	318
11.	Bounded-depth circuits	320
11.1	Introduction	320
11.2	The design of bounded-depth circuits	321
11.3	An exponential lower bound for the parity function	325
11.4	The complexity of symmetric functions	332
11.5	Hierarchy results	337
	Exercises	338
12.	Synchronous, planar and probabilistic circuits	340
12.1	Synchronous circuits	340
12.2	Planar and VLSI - circuits	344
12.3	Probabilistic circuits	352
	Exercises	359
13.	PRAMs and WRAMs: Parallel random access machines	361
13.1	Introduction	361
13.2	Upper bounds by simulations	363
13.3	Lower bounds by simulations	368
13.4	The complexity of PRAMs	373
13.5	The complexity of PRAMs and WRAMs with small communication width	380
13.6	The complexity of WRAMs with polynomial resources	387
13.7	Properties of complexity measures for PRAMs and WRAMs	396
	Exercises	411

14.	Branching programs	414
14.1	The comparison of branching programs with other models of computation	414
14.2	The depth of branching programs	418
14.3	The size of branching programs	421
14.4	Read-once-only branching programs	423
14.5	Bounded-width branching programs	431
14.6	Hierarchies	436
	Exercises	439
	References	442
	Index	455
