

Contents

1	Setting the Stage	1
I	Gauge Theories, Matrix Models and Geometric Transitions	15
2	Introduction and Overview	17
3	Effective Actions	29
3.1	The 1PI effective action and the background field method	29
3.2	Wilsonian effective actions of supersymmetric theories	32
3.3	Symmetries and effective potentials	35
4	Riemann Surfaces and Calabi-Yau Manifolds	41
4.1	Properties of Riemann surfaces	41
4.2	Properties of (local) Calabi-Yau manifolds	45
4.2.1	Aspects of compact Calabi-Yau manifolds	45
4.2.2	Local Calabi-Yau manifolds	52
4.2.3	Period integrals on local Calabi-Yau manifolds and Riemann surfaces	58
5	Holomorphic Matrix Models and Special Geometry	61
5.1	The holomorphic matrix model	62
5.1.1	The partition function and convergence properties	62
5.1.2	Perturbation theory and fatgraphs	65
5.1.3	Matrix model technology	69
5.1.4	The saddle point approximation for the partition function	76
5.2	Special geometry relations	79
5.2.1	Rigid special geometry	79
5.2.2	Integrals over relative cycles	80
5.2.3	Homogeneity of the prepotential	81
5.2.4	Duality transformations	82
5.2.5	Example and summary	84

6	Superstrings, the Geometric Transition and Matrix Models	87
6.1	Superpotentials from string theory with fluxes	90
6.1.1	Pairings on Riemann surfaces with marked points	90
6.1.2	The superpotential and matrix models	93
6.2	Example: Superstrings on the conifold	96
6.3	Example: Superstrings on local Calabi-Yau manifolds	97
7	B-Type Topological Strings and Matrix Models	103
8	Conclusions	111
II	M-theory Compactifications, G_2-Manifolds and Anomalies	115
9	Introduction	117
10	Anomaly Analysis of M-theory on Singular G_2-Manifolds	127
10.1	Gauge and mixed anomalies	127
10.2	Non-Abelian gauge groups and anomalies	132
11	Compact Weak G_2-Manifolds	133
11.1	Properties of weak G_2 -manifolds	133
11.2	Construction of weak G_2 -holonomy manifolds with singularities	136
12	The Hořava-Witten Construction	141
13	Conclusions	149
III	Appendices	151
A	Notation	153
A.1	General notation	153
A.2	Spinors	154
A.2.1	Clifford algebras and their representation	154
A.2.2	Dirac, Weyl and Majorana spinors	156
A.3	Gauge theory	159
A.4	Curvature	160
B	Some Mathematical Background	163
B.1	Useful facts from complex geometry	163
B.2	The theory of divisors	164
B.3	Relative homology and relative cohomology	166
B.3.1	Relative homology	166
B.3.2	Relative cohomology	167

B.4	Index theorems	169
C	Special Geometry and Picard-Fuchs Equations	173
C.1	(Local) Special geometry	173
C.2	Rigid special geometry	184
D	Topological String Theory	189
D.1	Cohomological field theories	189
D.2	$\mathcal{N} = (2, 2)$ supersymmetry in 1+1 dimensions	191
D.3	The topological B-model	196
D.4	The B-type topological string	199
E	Anomalies	201
E.1	Elementary features of anomalies	201
E.2	Anomalies and index theory	207
IV	Bibliography	211
