

Contents

1	Introduction	1
2	Definitions and Examples for the PAC-Learning Model	5
2.1	Concepts and Concept Classes	5
2.2	Distribution-Free Learning	7
2.2.1	Variants of the Learning Model	10
2.2.2	Aspects of the PAC-Model	11
2.3	Other Variants of the PAC-Learning Model	12
2.3.1	Error Tolerant Model	12
2.3.2	On-Line Prediction	13
2.3.3	Weaker Learning Models	14
2.3.4	Agnostic Learning	15
2.4	Examples of PAC-Learning Algorithms	17
2.4.1	Homogeneous Disks	17
2.4.2	Axis-Parallel Rectangles	19
2.5	The Finite Case	20
2.6	Some Concept Classes	21
2.6.1	Boolean Classes	21
2.6.2	Geometric Classes	22
2.7	Notations	23
3	Vapnik-Chervonenkis Dimension and PAC-learning	24
3.1	The Vapnik-Chervonenkis Dimension	24
3.2	Examples	25
3.2.1	Homogeneous Balls in \mathbb{R}^n	25

3.2.2	Axis-Parallel Rectangles	25
3.2.3	Polygons in the Plane	26
3.3	Sauer's Lemma	26
3.4	PAC-Learning and the VCdim	28
3.4.1	A Result of Vapnik and Chervonenkis and its Generalization	29
3.4.2	The Fundamental Result	30
3.4.3	Sample Complexity of Consistent Algorithms	31
3.4.4	Lower Bound on the Sample Complexity	33
3.5	The Case $\mathcal{C}_n \neq \mathcal{H}_n$	34
3.5.1	Consistency Problem and Polynomial-Time Learnability	34
4	Space Complexity and Compression	36
4.1	Introduction	36
4.2	Data Compression and Learnability	38
4.2.1	Occam's Razor	38
4.2.2	Minimum Description Length	40
4.2.3	Relating Data Compression and Learnability	40
4.2.4	Weak Learning and Compression	41
4.3	Data Compression and Space-Efficient Learning	42
4.4	Space-Bounded Learning	44
4.5	Characterization of Space-Bounded Learnable Concept Classes	46
4.5.1	The Trial & Error Learning Algorithm	46
4.6	Applications	49
4.6.1	Half-Spaces	49
4.6.2	Union of two Half-Spaces	53
4.6.3	Disks and Balls	54
5	Discussion of the Compression Parameter	68
5.1	Teaching	68
5.2	Compression Parameter and the VCdim	74
5.3	A Lower Bound on k_{ind}	75
5.3.1	Half-Spaces	76
5.3.2	Axis-Parallel Rectangles	76
5.4	Sample-Storage Trade-Off	78
5.4.1	Boosting the Reliability of Space-Bounded Learning Algorithms	78

6	The “Equivalence Query” Model of Angluin	81
6.1	Introduction	81
6.1.1	Outline of the Chapter	81
6.1.2	A Model for Exact Learning	82
6.1.3	Other Queries	83
6.1.4	Differences between the Models of Valiant and Angluin	84
6.1.5	Overview on Previous Results on Learning Geometric Concepts	84
6.2	Learning Half-Planes	87
6.2.1	Technical Preliminaries	90
6.2.2	Outline of the Algorithm	92
6.2.3	The Procedure DETERMINE-LABEL	93
6.2.4	The Main Procedure	96
6.3	Learning Axis-Parallel Rectangles	100
6.3.1	An Error-Tolerant 1-Space-Bounded Learning Algorithm for Half-Intervals	101
6.3.2	A 2d-Space-Bounded Learning Algorithm for BOX_n^d	107
7	Conclusion and Open Problems	109
