Introduction Two problems. (1) Is the test of time a legitimate tool for the critic of art? (2) Is its legitimacy proof against unforeseeable change in the arts themselves?	1
Chapter 1 The Test of Time	3-20
Section I What is it for a work of art to pass time's test? Physical survival neither necessary nor sufficient. What counts is survival of the work in our attention over time and under an interpretation that permits it to be correctly seen and understood. Vagueness inevitable in answering the questions: 'For how long must it survive?' and 'In whose attention?' Long enough, and well enough embedded in the culture.	3
Section II Conclusions standardly drawn from art's withstanding the test, or failing to. Their initial formulation in terms of high merit or quality demanding later elaboration. (See Chapter 9).	12
Section III The extension of the argument of section I to non-standard cases of survival, where a lost or destroyed work may survive through another work.	16
Chapter 2 Psychology, Progress, and Common Sense	21-40
Section I An attempt to explain away the inferences. The suggestion that we find excellent whatever survives, in response to a need for self-affirmation from our cultural past. The history and understanding of art incomprehensible on that view. Likewise artistic practice.	21

	<i>Page No.</i>
Section II Can the inferences be validated by the supposition that we find progress in the arts? Two conceptions of progress. Neither able to support conclusions about the quality of art drawn from its capacity to survive the scrutiny of a more advanced age.	26
Section III The eighteenth-century appeal to a common sense. Hume and Johnson. A latter-day restatement of the theme. Four unanswered questions.	33
Chapter 3 Autonomy of Interpretation The issue further unresolvable in the absence of a theory of correct interpretation.	41-59
Section I Historicism in interpretation contrasted with autonomy. T. S. Eliot's commitment to a principle of autonomy.	41
Section II Various arguments for autonomy based on (i) psychological assumptions, (ii) the rejection of art's transparency, (iii) the denial of art's value to be contingent, and (iv) the desire to make our understanding of it replete. Their inconclusiveness.	43
Section III The inability of the autonomous conception of interpretation to validate the inferences. Attempts by M. Shapiro, R. Wellek and A. Warren, and G. Boas. An objection to the utility of the idea of a work's 'potency for life'.	53
Chapter 4 The Historicist Alternative	60-85
Section I Competing versions of the historicist position. The essentially public nature of art and the resulting coincidence of artist's intention and best interpretation. Canonical interpretation as that which yields the best available contemporary reading of the text.	60
Section II Identification of the text. The artist's limited privilege in fixing its limits and condition.	66

	<i>Page No.</i>
Section III Availability versus actuality of interpretation. Uniqueness and optimality. Ambiguity and indeterminacy. The theoretically paradigm case of art as excluding indeterminacies.	70
Section IV The non-existence of hermeneutic circularity. If we project our standards onto the interpretation of another age's art that is at most a contingent fact.	75
Section V Sketch of a historicist justification of the inferences. An analogy with the capacity of ordinary artefacts to wear well.	79
Appendix Historicism as a living tradition in art theory, exemplified by A. W. Schlegel, Hegel, and recently J. Shearman.	83
Chapter 5 Understanding and Order	86-108
A distorted conception of the aesthetic to be avoided. The need to secure a non-contingent continuity between art and life.	
Section I An Aristotelian attempt to link the point of art with understanding of the world. Objections to it founded in an atomistic conception of understanding. The hopelessness of the atomistic representation of the world. Understanding undetachable from the human point of view. Hegel's rejection of atomism in aesthetics.	86
Section II Mimesis as instructive of possibility. Schiller's insistence on the capacity of art to enlarge our sense of possibility.	95
Section III Extension of the argument to the formal elements in aesthetic experience. Relatedness and order. Schiller on the sense of form, freedom, and the perception of order.	100
Chapter 6 The Pressures of Time	109-25
Reasons why the passage of time tends to weaken the hold of the individual work on our attention. Two forms of loss: displacement and disturbance. The advent of the novel,	
	109

	<i>Page No.</i>
increasing familiarity with the well-established, and the loss of naturalness all agents of displacement. Forces making for erosion and accretion to canonical interpretation being agents of disturbance.	
Chapter 7 Depth	126–51
Depth an exemplary quality in art able to resist both displacement and disturbance.	
Section I A Hazlittian account of depth of understanding in austere theoretical terms. Depth and truth. Structure and explanatory power.	126
Section II The application of the model to the literary arts. Goethe's suggestion. Its failure, and the impossibility of rescuing it by restrictions on subject matter that allows of depth.	132
Section III A less austere account. Depth and predictive power. The artist's ability to display such understanding in his representations. Typicality and universality. Two examples.	138
Section IV Deep art well placed to pass time's test.	146
Chapter 8 Beauty	152–90
Beauty in art equally well placed.	
Section I Errors to avoid in denying beauty to be a quality of objects and in asserting it to be explicable in terms of the spectator's responses.	152
Section II Hume's account avoids both sorts of error.	157
Section III The continuity between Kant and Hume. Kant's improvements to the Humean model. Deficiencies in Kant's proposal.	161
Section IV The predicative use of 'ζ is beautiful'. A way to remedy the deficiencies of Kant restricted in its application to the beautiful in art.	166
Section V Advantages afforded by the proposal.	171

	<i>Page No.</i>
Section VI Extension of the proposal to the beautiful in nature. To avoid ambiguity, beauty in art needs to be seen as conceptually prior to natural beauty.	176
Section VII The interest of natural beauty.	181
Section VIII The explanation of the capacity of beautiful art to survive time's pressures.	182
Chapter 9 Excellence and Stature	191–218
Section I Some standard arguments against the legitimacy for criticism of an evaluative interest in art exemplified in the work of Northrop Frye. Their untenability.	191
Section II Greater precision required in the formulation of the conclusions listed in Chapter 1 section II. A distinction between the good and the great. The inability to justify the inferences when cast in terms of goodness.	194
Section III The eighteenth-century idea of genius. Its involvement with the idea of a limit. Suggests another dimension of assessment. The generation and survival of art dependent on its availability.	199
Section IV The vocabulary of stature irreducible to that of excellence. A proposal to elucidate the idea of the great.	205
Section V Four illustrative applications of the account to works of art.	212
Section VI The mutual independence of excellence and stature.	215
Chapter 10 The Test Legitimized	219–35
A restricted argument developed for art whose survival is rooted either in depth or in beauty.	
Section I The failure of attempts at strict derivation pursuing the analogy of Chapter 4 section V. The argument from the best explanation. The hypothesis of stature as best explaining the survival of the beautiful and the deep against the pressures of time. A review of alternative explanations.	219

	<i>Page No.</i>
Section II Extension of the argument to the subsidiary conclusions of Chapter 1 section II.	232
Chapter 11 Sentimentality, Vulgarity, and Obscenity	236-66
The argument of Chapter 1 generalizable beyond depth and beauty in the systematic absence of counter-examples. Sentimentality, vulgarity, and obscenity the most plausible candidates as counter-examples.	
Section I Sentimentality. A feeling grounded in a false or unjustified thought entertained for the sake of pleasure or a gratifying view of the self.	237
Section II The difficulty of sentimentality in art resisting time's pressures. The <i>Principle of Transparent Understanding</i> . The tendency of sentimentality to yield before our recognition of it.	245
Section III Vulgarity explained in terms of thought revelatory of a certain cast of mind, one projectible from a common stereotype of the mass. The fundamental unity of the notion.	250
Section IV The systematic difficulties encountered by vulgar art in becoming embedded enough to pass time's test.	258
Section V Obscenity. In one crucial species the same principled obstacles as before inhibit the survival of the obscene in art.	261
Chapter 12 The Test of Time in the Theory of Art	267-300
The second question of the Introduction. Various ways in which the inferences might be thought no longer to hold.	
Section I Could historicism be abandoned? The argument of Valéry. Abandonment of historicism involving the abandonment of art itself.	267
Section II Auto-destructive art ill-fitted as a possible paradigm of art that resists the	275

inferences. When developed to evade the reach of Chapter 1 section III such works become unable to sustain the institution of art.	
Section III A neo-Marxist attack. The test of time as 'bourgeois subjectivism' rooted in false consciousness. Weakness of arguments resting on the assignment of art to the superstructure and the impliedly ephemeral nature of its values.	280
Section IV Arguments against the test from veneration. Matthew Arnold, Walter Benjamin, and R. Taylor.	287
Section V A challenge from the Frankfurt school. The incoherence of Adorno's notion of negativity. The impotence of propaganda and the entertainment industry to generate surviving art of no stature. Difficulties in envisaging the trivial in art as anything other than peripheral to a thriving institution.	293
Section VI The difficulty of abandoning time's test does nothing to secure its easy application.	300
