1	Introduction	1
1.1	Mobile ad hoc networks (MANETs)	1
1.2	Resources in wireless communications	3
1.3	Definitions on resource-efficiency	3
1.4	The objective of this work	4
1.5	The outline of this thesis	6
2	PHY Layer Designs: Multi-Antenna Techniques	9
2.1	Traditional single antenna digital communication system	9
2.1.1	Fundamentals on antenna	11
2.1.2	RF front-end signal processing	13
2.2	Smart antennas (beamforming)	14
2.2.1	Basic principle	14
2.2.2	Switched beam (fixed beamforming)	18
2.2.3	Steered beam (adaptive beamforming)	20
2.3	Space diversity techniques	25
2.3.1	Basic principle	25
2.3.2	Receive diversity	28
2.3.3	Transmit diversity & Space-time coding (STC)	30
2.4	Multiple-Input Multiple-Output (MIMO)	32
2.5	A cost analysis on multi-antenna techniques based on hardware complexity and power consumption	34
3	MAC and Cross-Layer Designs	37
3.1	Traditional MAC designs for MANETs	37

3.1.1	The CSMA/CA used by IEEE 802.11 MAC	38
3.1.2	Examples for further explanations on CSMA/CA	40
3.1.3	My proposal to the exposed node problem	42
3.2	BF-MAC	43
3.2.1	An overview of previous investigations	44
3.2.2	Multi-directional-antenna (MDA) based BF-MAC (MDA-MAC)	51
3.3	Space diversity MAC (SD-MAC)	58
3.4	BF-MAC vs. SD-MAC	60
3.5	Radiation power control (PC)	61
3.6	Transceiver power management (PM)	63
3.6.1	Energy model for the transceiver	63
3.6.2	Power management mechanism	65
3.7	Network simulation	67
3.7.1	Simulation configurations	68
3.7.2	Results	69
3.8	Resource-efficiency comparison	71
4	Simplified Switched Beam (SSB): PHY + MAC Design and Simula- tion	73
4.1	Motivation	73
4.2	Antenna array selection	73
4.3	The design of SSB	77
4.3.1	Basic principle	77
4.3.2	Analysis on the length of the training period	80
4.3.3	SSB-MAC: the associated MAC protocol	80
4.3.4	Beamforming vs. Diversity	82
4.3.5	Interference suppression (IS) technique	83
4.4	Network simulation	85
4.4.1	Simulation configurations	85
4.4.2	Results	86
4.5	Resource-efficiency comparison	88

5	SSB Test-bed Implementation and Measurements	89
5.1	Carrier frequency band selection	89
5.2	Hardware implementation	90
5.2.1	Antenna	91
5.2.2	RF switch	92
5.2.3	RF combiner & divider	92
5.2.4	RF cables	93
5.2.5	RF transceiver & Baseband component	95
5.3	Software stack	104
5.3.1	Upper-layer software (ULS)	104
5.3.2	SSB processing unit (SPU)	105
5.4	Test-bed measurements and analysis	116
5.4.1	Scenario	116
5.4.2	Selected measures	116
5.4.3	Experiment configurations	118
5.4.4	Measurement results and analysis	120
6	Conclusions and Outlook	129
6.1	Conclusions	129
6.2	Outlook	131
A	SSB Processing Unit (SPU) Implementation Details	133
A.1	Operating specification of CC2400 SPI	133
A.2	Top-level schematic diagram of the SPU	135
A.3	State machine descriptions for each component of the SPU	137
A.3.1	Sub-modules of SPI master	137
A.3.2	Large packet transfer support of SPI master	144
A.3.3	Sub-modules of SSB controller	146
A.3.4	Other auxiliary modules of the SPU	153
A.4	Experiences learned from the implementation	155
A.4.1	The array signal processing must be performed using the hardware-based solution	156

A.4.2	Two VHDL design tips	158
A.5	Measured timing diagrams on I/Os between CC2400 and SPU	158
B	Derivation of IF and Baseband Signals with Phase Shift	169
B.1	Derivation on the I-channel	169
B.2	Derivation on the Q-channel	170
B.3	Derivation applying the analytic signal representation	170
B.4	Derivation of baseband signals with phase shift	171
B.5	Concluding remarks	172
C	List of Abbreviations	173
D	List of Symbols	177
	List of Figures	182
	List of Tables	184
