Lists of Figures and Tables	ix
Preface	xi
Introduction	1
1 Thinking about the Environment	9
1.1 Reality and ideals	9
1.2 Thinking in frameworks	12
1.3 Sociobiology	16
2 Frameworks	21
2.1 Economic, political and moral thinking	21
2.2 Looking forward	27
3 Ecology: What It Is and What It Isn't	31
3.1 Two kinds of ecology	31
3.2 Scientific ecology	35
3.3 Ecologists at work	38
3.4 Null hypotheses	42
4 Ecology in Perspective	45
4.1 Some history	45
4.2 Mathematical ecology	55
4.3 Connections	62
5 Reductions and Holism	66
5.1 Parts and wholes	66
5.2 Varieties of reduction	68
5.3 Occam's razor	73
6 Nature and Existence	80
6.1 Ontological parasites	80
6.2 The properties of wholes	84
6.3 Nature and the natural	88
7 Ecological Explanation	92
7.1 Modes of explanation	92
7.2 Theories and things	97
7.3 Forest succession	101
8 Supervenience and Essence	109
8.1 Functions and supervenience	109
8.2 Ecological traits	112

## *Contents*

8.3 Ecological communities	119
8.4 Community role and the Gaia hypothesis	124
9 Theory, Fact and Value	133
9.1 Science and ethics	133
9.2 Reinterpreting the moral	136
9.3 Deep ecology and ethics	139
10 Puzzles About Value	146
10.1 Biocentrism and worth	146
10.2 Systemic value	149
10.3 Two modes of valuing	152
11 The Environment and Conventional Moral Theory	157
11.1 The tragedy of the commons	157
11.2 Prospects for environmental ethics	163
11.3 Utilitarian and contractarian accounts	165
12 Beyond the Social Contract	173
12.1 Ethics beyond utility	173
12.2 Persons, primary goods and duality	178
12.3 Living in nature	182
13 Living in the New Community	186
13.1 Ethical polymorphism and environmentalism	186
13.2 Nature, role and function	190
13.3 Taking stock	195
14 Practical Matters	201
14.1 Political and economic frameworks	201
14.2 International co-operation	209
14.3 Education and other animals	215
Bibliography	222
Index	230

# Figures and Tables

## Figures

4.1	Model of trophic structure	53
4.2	Exponential discrete growth	57
4.3	Discrete growth stabilising at carrying capacity $K$	58
4.4	Continuous growth limited at carrying capacity $K$	59
4.5a	Imagined effects of introducing interspecific competition	60
4.5b	How strong competition might lead to extinction	60
4.6	Growth of <i>Paramecium</i> populations in separate culture and in mixed culture	61
4.7	Effect of competition on <i>Paramecium</i> populations	62
8.1	Symbiotic protozoa in termites	126
8.2	Comparison of prokaryotic and eukaryotic cells	127

## Tables

7.1	Horn's Markov matrix	103
7.2	Successional convergence over time	103
