<i>List of figures</i>	<i>page</i> xi
<i>List of tables</i>	xiv
<i>Preface</i>	xv
Part I <i>Foundations</i>	
1 Introduction	3
2 General equilibrium and welfare economics	18
3 Topics in measurement	59
Part II <i>Analysis in the competitive economy</i>	
4 Commodity taxation	99
5 Income taxation	131
6 Policy reform	167
7 Risk	196
8 Corporate taxation	231
Part III <i>Relaxing the assumptions</i>	
9 Public goods	263
10 Externalities	312
11 Imperfect competition	348
12 Tax evasion	383
Part IV <i>Introducing real time</i>	
13 Overlapping generations economies	415
14 Social security	446
15 Debt and taxation	485
<i>References</i>	516
<i>Author index</i>	536
<i>Subject index</i>	542

# FIGURES

1.1	General government total outlay as a percentage of nominal GDP	<i>page</i> 12
1.2	Japanese government income and expenditure, 1991	13
1.3	United Kingdom government income and expenditure, 1991	14
1.4	US Federal and State expenditure by type and function, 1992	15
2.1	A typical production set	24
2.2	Non-uniqueness of optimal choices	29
2.3	Semi-continuity	30
2.4	The existence of equilibrium	31
2.5	Continuity of equilibrium	33
2.6	Core of the economy	35
2.7	The First Theorem	40
2.8	The non-satiation assumption	40
2.9	The Second Theorem in an exchange economy	41
2.10	Proof of the Second Theorem	43
2.11	The use of lump-sum transfers	44
2.12	Pareto optimal allocations	51
2.13	Incompleteness of the Pareto ranking	51
2.14	Social indifference curves	58
3.1	Construction of Engel scale	63
3.2	Rothbarth equivalence scale	64
3.3	The Barten scale	68
3.4	Lorenz curves as an incomplete ranking	73
3.5	Relating Gini to Lorenz	75
3.6	The equally distributed equivalent income	83
4.1	Interpretation of the Ramsey rule	105

4.2	Production efficiency	128
5.1	After-tax budget constraints	134
5.2	Preferences	135
5.3	Translation of indifference curves	136
5.4	Agent monotonicity	137
5.5	A tax rate greater than 100 per cent	149
5.6	Zero rate at the top	152
5.7	Initial schedule	153
5.8	Pareto-improving schedule	154
5.9	Final schedule	154
5.10	Optimal tax rate and equity	162
6.1	The set of policy changes	169
6.2	Smooth and non-smooth production sets	171
6.3	Welfare improvement and production feasibility	176
6.4	Welfare-improving reform	176
6.5	Pareto-improving set	177
6.6	Cones	178
6.7	Representation via demands	179
6.8	Explanation of theorem 6.5	180
6.9	Production inefficiency after reform	183
6.10	Production efficiency	183
6.11	The inverse optimum	187
7.1	Time and uncertainty	200
7.2	Portfolio choice	215
7.3	Wealth-portfolio locus	215
7.4	Income tax with zero return on safe asset	217
7.5	Effect of an income tax	218
9.1	Consumption possibilities for one unit of good	266
9.2	The Lindahl equilibrium	274
9.3	Indirect preferences over private provision	282
9.4	Private provision equilibrium	283
9.5	Non-optimality of private provision	283
9.6	The possibility of oversupply	284
9.7	Equilibria and optima for various $H$	286
9.8	Comparison of lump-sum and commodity tax finance	294
9.9	Manipulating the Lindahl equilibrium	296
10.1	Non-convexity	324
13.1	Structure of generations	417

13.2	Efficient allocation	428
13.3	Dynamic solution	432
13.4	Stable convergence to steady state	438
13.5	Consumption possibility locus	441
13.6	Golden rule competitive equilibrium	443
14.1	Non-existence of pooling equilibrium	481
14.2	Separating equilibrium	482
14.3	Social security	483
15.1	Equilibrium and stability	489
15.2	Effect of increase in external debt	489
15.3	Steady state effect	491
15.4	Effect of an increase in internal debt	493
15.5	Receipts and payment for one-period debt	501

---

# TABLES

1.1	Comparison of tax yields	<i>page</i> 14
3.1	Minimum needs equivalence scales	62
4.1	Optimal tax rates	116
4.2	Redistribution of Indian commodity taxes	117
4.3	Optimal redistribution	117
5.1	Optimal tax schedule	157
5.2	Optimal tax schedule: increased dispersion of skills	158
5.3	Contrast of utilitarian and maxi-min	159
6.1	Solution of inverse optimum	188
6.2	Tax changes	189
6.3	Welfare changes	189
6.4	Marginal social costs	192
14.1	Effect of social security	456
14.2	Effect on capital stock	459
