

CONTENTS

1. ALGEBRAIC AND TRANSCENDENTAL SYSTEMS

1.1 Introduction	1
1.2 Matrices and Linear Systems	2
1.3 Gauss Elimination	5
1.4 Tridiagonal Systems	9
1.5 The Generalized Newton's Method	23
1.6 Remarks on the Generalized Newton's Method	34
1.7 Eigenvalues and Eigenvectors	36
Exercises	41

2. APPROXIMATION

2.1 Introduction	48
2.2 Discrete Functions	48
2.3 Piecewise Linear Interpolation	50
2.4 Piecewise Parabolic Interpolation	51
*2.5 Cubic Spline Interpolation	54
2.6 Lagrange Interpolation	62
2.7 Least Squares	66
Exercises	70

3. APPROXIMATE INTEGRATION AND DIFFERENTIATION

3.1 Introduction	76
3.2 The Trapezoidal Rule	78
3.3 Simpson's Rule	85
3.4 Romberg Integration	87
3.5 Remarks About Numerical Integration	90
3.6 Numerical Differentiation	90
Exercises	95

4. APPROXIMATE SOLUTION OF INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

4.1 Introduction	100
4.2 Euler's Method	102
*4.3 Convergence of Euler's Method	105
4.4 A Runge-Kutta Method	112
4.5 Higher Order Runge-Kutta Formulas	117
4.6 Kutta's Fourth-Order Method for a System of Two First-Order Equations	119
4.7 Kutta's Fourth-Order Formulas for Second-Order Differential Equations	120
4.8 The Method of Taylor Expansions	123

4.9 Instability	126
*4.10 Approximation of Periodic Solutions of Differential Equations	133
4.11 Hints and Remarks	136
Exercises	137

5. APPROXIMATE SOLUTION OF BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

5.1 Introduction	143
5.2 Central Difference Method for Linear Boundary Value Problems	144
5.3 Upwind Difference Method for Linear Boundary Value Problems	153
5.4 Numerical Solution of Mildly Nonlinear Boundary Value Problems	159
*5.5 Convergence of Difference Methods for Boundary Value Problems	162
*5.6 The Finite Element Method	169
5.7 Differential Eigenvalue Problems	175
Exercises	177

6. ELLIPTIC EQUATIONS

6.1 Introduction	182
6.2 Boundary Value Problems for the Laplace Equation	185
6.3 Approximate Solution of the Dirichlet Problem on a Rectangle	187
6.4 Approximate Solution of the Dirichlet Problem on a General Domain	191
6.5 The General Linear Elliptic Equation	194
6.6 Upwind Difference Method for General Linear Elliptic Equations	199
*6.7 Theory for the Numerical Solution of Linear Boundary value Problems	204
6.8 Numerical Solution of Mildly Nonlinear Problems	207
Exercises	210

7. PARABOLIC EQUATIONS

7.1 Introduction	214
7.2 An Explicit Numerical Method for the Heat Equation	216
7.3 The General Linear Parabolic Equation	222
7.4 An Explicit Upwind Method	229
7.5 Numerical Solution of Mildly Nonlinear Problems	232
*7.6 Convergence of Explicit Finite Difference Methods	234
7.7 Implicit Central Difference Method	239
7.8 Implicit Upwind Method	245
7.9 The Crank-Nicolson Method	248
Exercises	253

8. HYPERBOLIC EQUATIONS

8.1 Introduction	257
8.2 The Cauchy Problem	259

8.3 An Explicit Method for Initial-Boundary Problems	263
8.4 An Implicit Method for Initial-Boundary Problems	268
8.5 Mildly Nonlinear Problems	270
8.6 Hyperbolic Systems	271
8.7 The Method of Characteristics for Initial Value Problems	278
8.8 The Method of Courant, Isaacson and Rees	287
8.9 The Lax-Wendroff Method	294
Exercises	296

*9. THE NAVIER-STOKES EQUATIONS

9.1 Introduction	301
9.2 The Governing Dynamical Equations	301
9.3 The Finite Difference Equations	302
9.4 Pressure Approximation	307
9.5 Solution Algorithm	309
9.6 The Cavity Flow Problem	314
9.7 Stability of the Method	320
Exercises	323

ANSWERS TO SELECTED EXERCISES	324
BIBLIOGRAPHY	332
SUBJECT INDEX	337
