

CONTENTS

Preface	<i>xiii</i>
---------------	-------------

Chapter 1 Introduction

References	5
------------------	---

Chapter 2 Shooting Methods

2.1 Introduction	6
2.2 Two-Point Boundary Value Problem Statement	6
2.3 Reduction of n th-Order Equation	8
2.4 Analytical Solution	9
2.5 Numerical Solution	10
2.6 Stability	11
References	15

Chapter 3 Method of Adjoins

3.1 Introduction	17
3.2 Linear Two-Point Boundary Value Problem	17
3.3 Discussion	22
3.4 Example: Linear System	23
3.5 Example: Problem of Section 2.4	25
3.6 Nonlinear Two-Point Boundary Value Problems	27
3.7 Discussion	31
3.8 Implicit Boundary Conditions	32
3.9 Example: Implicit Boundary Conditions	41
3.10 Numerical Examples: Method of Adjoins	43
References	49

Chapter 4

Method of Complementary Functions

4.1	Introduction	50
4.2	Linear Combination of Solutions	51
4.3	Method of Complementary Functions	56
4.4	Example	60
4.5	Discussion	61
4.6	Alternative Derivations, Methods of Adjoints and Complementary Functions	63
4.7	Comparison of the Two Methods	67
4.8	Practical Numerical Experience	69
4.9	Numerical Linear Independence	71
4.10	Gram-Schmidt Process	73
4.11	Orthonormalization and Differential Equations	78
4.12	Conte's Method	83
	References	86

Chapter 5

Quasilinearization

5.1	Introduction	87
5.2	Quasilinearization	87
5.3	Discussion	90
5.4	Example	93
5.5	Convergence of the Quasilinearization Method	97
	References	108

Chapter 6

Newton-Raphson Method and Two-Point Boundary Value Problems

6.1	Introduction	110
6.2	Newton-Raphson Method, Finite Set of Nonlinear Equations	111
6.3	Kantorovich Theorem	114
6.4	Kantorovich Theorem for a Finite Set of Nonlinear Equations	121
6.5	Newton-Raphson Method as Contraction Mapping	123
6.6	Comparison of Kantorovich's Theorem and Contraction Mapping	125

6.7	Method of Adjoins and Newton-Raphson Method	128
6.8	Numerical Results	131
6.9	Modified Method of Adjoins	138
6.10	Friedrichs' Solution of $P(x) = 0$	140
6.11	Quasilinearization and Newton-Raphson Method	143
	References	151

Chapter 7

Continuation

7.1	Introduction	153
7.2	Continuation Method in Two-Point Boundary Value Problems	154
7.3	Discussion of the Continuation Method	155
7.4	Numerical Results	158
7.5	Justification for the Continuation Method in Two-Point Boundary Value Problems	164
7.6	Continuation Method of Ficken	169
7.7	Continuation in Quasilinearization	172
7.8	Discussion of the Procedure	174
7.9	Numerical Examples	176
7.10	A Perturbation Technique	185
7.11	Justification of the Perturbation Method	186
7.12	Numerical Experience	191
7.13	Discussion	198
	References	199

Chapter 8

Finite Difference Methods and Related Topics

8.1	Introduction	201
8.2	Finite Difference Method	202
8.3	Discussion of Finite Difference Method	204
8.4	Problems in Setting Up the Finite Difference Equations	205
8.5	Some Matrix Theory	212
8.6	Numerical Examples	214
8.7	Parallel or Multiple Shooting	217
8.8	Quasilinearization and Finite Difference Equations	221
8.9	Boundary Value Version of Initial Value Problem	226
	References	230

Chapter 9

Second-Order Newton-Raphson Methods

9.1	Introduction	232
9.2	Second-Order Newton-Raphson Methods	233
9.3	Sets of Equations	235
9.4	Second-Order Methods for $P(x) = 0$	242
9.5	Calculation of the Partial Derivatives	245
9.6	Numerical Experience	256
	References	264
	Appendix	265
	Author Index	271
	Subject Index	273
