

**CONTENTS****Page****Preface**

|   |                              |     |
|---|------------------------------|-----|
| 1. Introduction   | M.E. Bushell                 | 1   |
| 2. Taxonomy of antibiotic-producing actinomycetes and new<br>approaches for their selective isolation                     | E.M.H. Wellington & T. Cross | 7   |
| 3. Recent progress in the discovery of beta-lactam antibiotics  | K. Kitano                    | 37  |
| 4. Progress in interpretation of antibiotic structures using<br>computerized infra red techniques                         | H.B. Woodruff                | 71  |
| 5. Product formation and plant cell specialisation : a case<br>study of photosynthetic development in plant cell cultures | C.C. Dalton & E. Peel        | 109 |
| 6. Detection of microbial metabolites with antitumour<br>activity   | R.J. White & W.M. Maise      | 167 |
| 7. Organisation of a Pilot Plant for the development of<br>new products   | D.J.D. Hockenhull            | 191 |
| Index   |                              | 225 |
