## Chapter 0. REVIEW OF ELEMENTARY ELECTRON SPIN RESONANCE

Systems Studied by Electron Spin Resonance	1
The Basic Electron Spin Resonance Experiment	2
Relaxation and Lineshape	4
The Spin Hamiltonian	6
The Electronic Zeeman Interaction	7
Magnetic Hyperfine Interactions	9
Equivalent Nuclei and Intensity Patterns	10
Other Interactions	13

## Chapter I. THE ORIGIN OF MAGNETIC ENERGY LEVELS

1. The Dirac Electron	15
Origin of the Dirac Equation	15
Some Properties of the Dirac Equation and Dirac Operators	18
Solutions of the Dirac Equation	20
Perturbations of the Dirac Hydrogen Atom	32
Other Calculations with Four-Component Functions	35
Summary of Section 1	36
2. The Relationship between Relativistic and Nonrelativistic Theories	37
Characteristics of and Criteria for Transformations	38
The Foldy-Wouthuysen Transformation	40
Foldy-Wouthuysen Transformation with Electric Fields Present	45
Partitioning of the Dirac Equation	47
Discussion of Terms Occurring in the Hamiltonian	55
Hydrogenic Ion Results	65
Summary of Section 2	67

3. Radiative Corrections	68
Quantum Electrodynamics	68
Anomalous Magnetic Moment	71
Modification of the Dirac Equation	72
Reduction to Nonrelativistic Form	73
Summary of Section 3	75
4. Relativistic Many-Electron Theories	76
The Bethe-Salpeter Equation	76
The Breit Equation	78
Reduction to Nonrelativistic Form	82
Other Methods	86
Discussion of Results	86
Extension to Many Electrons	88
Summary of Section 4	89
5. Effects of Nuclear Structure	90
Nuclear Size	90
Nuclear Moments	90
Summary of Section 5	97
6. The Separation of Nuclear and Electronic Motions	98
Center of Mass in Relativistic Quantum Mechanics	98
Nonrelativistic, One-Electron Atoms	98
Effect on Relativistic Corrections for One-Electron Atoms	99
Other Systems	101
Summary of Section 6	108
Chapter II. THE DESCRIPTION OF MAGNETIC ENERGY LEVELS	
7. The Spin Hamiltonian as a Summary of Experimental Data	111
Isotropic Spin Hamiltonian for $S = \frac{1}{2}$	112
Nearly Degenerate Electronic States	130
Nonisotropic Spin Hamiltonians	135
Powder Spectra	158
Summary of Section 7	162
8. The Relationship of the Spin Hamiltonian to Calculated Energy Levels	164
Partitioning Treatment	164
Spin Hamiltonian	167
States with Additional Degeneracies	180
Summary of Section 8	187

9. Perturbation Expressions for Spin Hamiltonian Parameters	189
Form of the Spin Hamiltonian	189
Spin Hamiltonian Parameters	191
Orientation Dependence of Spin Hamiltonian Parameters	205
Summary of Section 9	207
10. Summarizing Calculated Data in Terms of Density Matrix Components	208
Spin Components of Reduced Density Matrices	208
Relationship to Spin Hamiltonian Parameters	213
Summary of Section 10	219
Chapter III. CALCULATIONS	
11. Wave Functions for Open-Shell Systems	221
Spin Couplings and Antisymmetry	222
Spin Eigenfunctions	223
The Interaction of Space and Spin via Permutational Symmetry	238
Comparison of Functions of Different Types	240
Other Methods of Calculation	267
An Example: Lithium Atom	271
Summary of Section 11	276
12. Evaluation of Spin Hamiltonian Parameters	277
Operators Involved	277
Basis Functions	279
Integrals	283
Summary of Section 12	301
13. Semiempirical Methods	302
Atomic Orbital Spin Density	302
All-Valence-Electron Semiempirical Methods	303
Pi-Electron Methods	304
Simple Valence Bond Treatments	321
Summary of Section 13	324
14. External Perturbations	326
Static and Dynamic Effects	326
Nature of the Interaction	326
Perturbation Treatments	327
Semiempirical Methods	327
Summary of Section 14	328

## APPENDICES

Appendix A Classical Mechanics and Fields including Relativistic Forms; Units	329
Classical Mechanics of Particles	329
Electromagnetic Fields and Potentials	330
Charged Particles in Fields	331
Four-Vectors and Lorentz Transformations	332
Units	336
Appendix B Gauge Transformations in Nonrelativistic Quantum Mechanics	343
Appendix C Rotations, Tensors, Angular Momentum, and Related Topics	346
Angular Momentum Operators	346
Angular Momentum Eigenfunctions	347
Matrices of Angular Momentum Operators	348
Coupling of Angular Momenta	349
Time Reversal, Complex Conjugation, and Kramers Conjugation	353
Rotations	355
Tensors and Tensor Operators	361
Appendix D Reduced Density Matrices	365
Appendix E Some Useful Operator Identities and Matrix Relationships	370
Inverse of Operator Sum	370
Exponential Operators	370
Eigenvalues and Eigenvectors of a Complex Hermitian Matrix	372
Diagonalization and Inversion of $2 \times 2$ Matrices	373
Commutators of Spin-Dependent Operators with $S^2$	375
Appendix F Summary of Terms in the Hamiltonian	378
REFERENCES	387
INDEX	395
