

Introduction: The Scope of Biochemistry	xxv
---	-----

PART I. FOUNDATION OF BIOCHEMISTRY

Chapter 1. Frameworks of Biochemistry	3
1.1. The Origin of Life	3
1.1.1. Chemical Evolution	3
1.1.1A. Synthesis Stage	4
1.1.1B. Polymerization Stage	4
1.1.1C. Self-Assembly Stage	5
1.1.2. Biological Evolution	5
1.1.2A. Endosymbiotic Theory	5
1.1.2B. Archaeobacteria	6
1.2. The Living Cell	7
1.2.1. The Varied Types of Cells	7
1.2.1A. Carbon Source	7
1.2.1B. Energy Source	8
1.2.1C. Cell Structure	8
1.2.2. Comparing Prokaryotes and Eukaryotes	9
1.3. Water—The Solvent of Life	10
1.3.1. The Structure of Water	11
1.3.2. Hydrogen Bonding in Water	11
1.3.3. Ionization of Water	12
1.3.4. pH	13
1.3.4A. Definition and Scale	13
1.3.4B. Brønsted Acids and Bases	14
1.3.4C. Henderson–Hasselbalch Equation	14
1.3.5. pK'_a	15
1.3.5A. The Meaning of pK'_a	15
1.3.5B. The Effects of Variables on pK'_a	15

1.3.6. Buffers	16
1.3.6A. Buffers in Biochemistry	16
1.3.6B. Mechanism of Action	17
1.4. Noncovalent Interactions	18
1.4.1. Hydrogen Bonds	18
1.4.2. Hydrophobic Interactions	18
1.4.3. Ionic Interactions	20
1.4.4. Van der Waals Interactions	21
Summary	21
Selected Readings	22
Review Questions	22
Problems	23

PART II. BIOMOLECULES

Chapter 2. Amino Acids and Peptides	27
2.1. Amino Acid Structure	27
2.1.1. Side-Chain Functional Groups	29
2.1.2. Classifying Amino Acids	29
2.2. Acid–Base Properties	31
2.2.1. Dipolar Ions	31
2.2.2. The Isoelectric Point	32
2.2.3. Titration Curves	32
2.2.4. Ion-Exchange Chromatography	33
2.2.5. Estimating Net Charge	34
2.3. The Peptide Bond	35
2.4. End-Group Analysis	36
2.4.1. The Sanger Reaction	36
2.4.2. The Dansyl Chloride Reaction	38
2.4.3. The Edman Degradation	39
2.5. Naturally Occurring Peptides	40
Summary	43
Selected Readings	43
Review Questions	44
Problems	44
Chapter 3. Proteins	47
3.1. The Nature of Proteins	48
3.1.1. Definition	48
3.1.1A. Occurrence of Peptide Bonds	48
3.1.1B. High Molecular Weights	48
3.1.2. Classifications and Functions	49
3.1.2A. Specific Functions	49
3.1.2B. Chemical Composition	49
3.1.2C. Molecular Shape	50
3.1.2D. General Functions	50
3.1.3. Isolation, Purification, and Characterization	50
3.1.3A. Isolation and Purification of Proteins	50
3.1.3A.a. Extraction from Source	50

3.1.3A.b. Removal of Impurities	50
3.1.3A.c. Protein Fractionation.	51
3.1.3A.d. Storage	51
3.1.3B. Characterization of Proteins	51
3.2. Primary Structure.	51
3.2.1. Amino Acid Composition and Peptide Maps	51
3.2.1A. Amino Acid Composition	51
3.2.1B. Peptide Maps	52
3.2.1C. Sickle-Cell Anemia	53
3.2.2. Determining Amino Acid Sequence.	53
3.2.2A. Preparing the Protein for Sequencing	54
3.2.2B. Sequencing the Polypeptide Chains	55
3.2.2B.a. N-Terminal Amino Acid	55
3.2.2B.b. C-Terminal Amino Acid	55
3.2.2B.c. Internal Amino Acid Residues	55
3.2.2C. Deriving the Complete Structure	56
3.2.3. Primary Structure as a Molecular Determinant	56
3.2.4. Primary Structure as an Index of Evolution	58
3.3. Secondary Structure.	58
3.3.1. Intrachain Hydrogen Bonds—the Alpha Helix	60
3.3.2. Constraints on α-Helix Formation	60
3.3.2A. Helix-Breaking Amino Acids.	60
3.3.2B. Amino Acids with Bulky Side Chains	60
3.3.2C. Ionic Interactions	62
3.3.2D. Planarity and <i>Trans</i> Configuration of the Peptide Bond.	62
3.3.3. Interchain Hydrogen Bonds—the Beta-Pleated Sheet	62
3.3.4. Reverse Turns	62
3.3.5. Supersecondary Structures	63
3.4. Tertiary Structure.	63
3.4.1. X-Ray Diffraction	64
3.4.2. Globular and Fibrous Proteins	65
3.4.3. Forces Stabilizing the Tertiary Structure	65
3.4.4. Domains	67
3.5. Quaternary Structure.	67
3.6. Properties of Proteins	67
3.6.1. Net Charge	67
3.6.2. Protein Solubility	67
3.6.3. Denaturation	69
3.7. Protein Binding—Hemoglobin and Myoglobin	70
3.7.1. Oxygen Saturation Curves.	70
3.7.2. Cooperativity—Multiple Binding Sites.	71
3.7.3. Changes in Hemoglobin upon Oxygenation	72
3.7.4. The Bohr Effect.	74
3.7.5. 2,3-Bisphosphoglycerate—a Regulator of Oxygen Binding	75
3.8. Structures of Some Specific Proteins	76
3.8.1. Keratins	76
3.8.2. Collagen	77
3.8.3. Myosin	77
3.8.4. Immunoglobulins	77
Summary	78

Selected Readings	79
Review Questions	79
Problems	80
Chapter 4. Enzymes	83
4.1. General Properties of Catalysts.	84
4.2. Enzyme Specificity	84
4.2.1. The Active Site	84
4.2.1A. Lock-and-Key Theory	84
4.2.1B. Induced Fit Model	85
4.2.1C. Polyaffinity Theory	85
4.2.2. Enzyme Classification	86
4.2.3. Mechanism of Action	87
4.3. Enzyme Efficiency	89
4.3.1. Turnover Number	89
4.3.2. Enzyme Units	89
4.3.3. Factors Contributing to Catalysis.	89
4.3.3A. Proximity and Orientation	89
4.3.3B. Electrostatic Effects	90
4.3.3C. Entropic Factors	90
4.3.3D. Strain and Distortion	90
4.3.3E. Acid–Base Catalysis	90
4.3.3F. Covalent Catalysis	90
4.4. Regulation of Enzyme Activity I: Enzyme Properties.	91
4.4.1. Rate, Concentration, and Reaction Time.	91
4.4.1A. Rate	91
4.4.1B. Concentration	91
4.4.1C. Reaction Time	92
4.4.2. pH.	92
4.4.2A. Changes in the State of Ionization	93
4.4.2B. Changes in Conformation	93
4.4.3. Temperature	93
4.4.3A. Effect of Temperature on Reaction Rate	93
4.4.3B. Effect of Temperature on Enzyme Stability	94
4.4.4. Cofactors, Vitamins, and Hormones.	94
4.4.5. Inhibitors	95
4.5. Regulation of Enzyme Activity II: Enzyme Kinetics.	96
4.5.1. Rate Equations	96
4.5.2. The Steady State	96
4.5.3. Michaelis–Menten Equation	96
4.5.3A. Underlying Assumptions	97
4.5.3B. Derivation of the Rate Equation	97
4.5.3C. Description of the v versus $[S]$ Curve	98
4.5.3D. Sample Calculations	98
4.5.3E. Lineweaver–Burk Transformation	99
4.5.3F. Michaelis Constant	99
4.5.4. Measures of Enzyme Activity	100
4.5.4A. Substrate Constant	100
4.5.4B. Catalytic Rate Constant	100
4.5.4C. Specificity Constant	100

4.5.5. Enzyme Inhibition	100
4.5.5A. Competitive Inhibitors	100
4.5.5B. Antimetabolites	102
4.5.5C. Noncompetitive Inhibitors	102
4.5.5D. Uncompetitive Inhibitors	103
4.6. Regulation of Enzyme Activity III: Enzyme Types	103
4.6.1. Inactive Forms	103
4.6.2. Isozymes.	104
4.6.3. Multienzyme Systems.	104
4.6.4. Regulatory Enzymes.	105
4.6.5. Feedback Mechanisms	105
4.6.6. Covalently Modified Enzymes.	106
4.6.7. Allosteric Enzymes	106
4.6.7A. The Sequential Model	106
4.6.7B. The Concerted Model	107
4.6.7C. Comparing the Models	107
4.7. Enzyme Function—Chymotrypsin’s Mechanism of Action	108
4.7.1. Amino Acids Essential for Activity	108
4.7.1A. Role of Serine	108
4.7.1B. Role of Histidine	109
4.7.2. Molecular Architecture of the Active Site	109
4.7.3. Proposed Mechanism	109
4.7.3A. Two-Stage Reaction	109
4.7.3B. Tetrahedral Intermediate	112
4.7.3C. Postulated Mechanism	112
Summary	112
Selected Readings	113
Review Questions	113
Problems	114
Chapter 5. Carbohydrates	117
5.1. Monosaccharides.	119
5.1.1. Some Basic Terminology.	119
5.1.2. Ring Structures	120
5.1.2A. Mutarotation	120
5.1.2B. Reaction of Carbonyl Groups with Alcohols	120
5.1.2C. Ring Formation	120
5.1.2D. Potential Aldehyde Groups	120
5.1.2E. Haworth Projections	122
5.1.3. Derived Monosaccharides	122
5.1.3A. Sugar Acids	122
5.1.3B. Sugar Alcohols	124
5.1.3C. Amino Sugars	124
5.1.3D. Deoxysugars	124
5.1.3E. Esters	124
5.2. Chemical Reactions of Carbohydrates	125
5.2.1. Oxidation–Reduction Reactions	125
5.2.2. Phosphorylation	125
5.2.3. Etherification.	125
5.3. Oligosaccharides	126

5.3.1. Maltose	126
5.3.2. Lactose	127
5.3.3. Sucrose	127
5.4. Homopolysaccharides	128
5.4.1. Storage Polysaccharides	128
5.4.1A. Starch	128
5.4.1B. Glycogen	129
5.4.1C. Dextrans	129
5.4.1D. Degradation of Starch and Glycogen	129
5.4.2. Structural Polysaccharides	131
5.4.2A. Cellulose	131
5.4.2B. Chitin	131
5.5. Heteropolysaccharides	131
5.5.1. Glycosaminoglycans	132
5.5.2. Glycoproteins	133
5.5.3. Proteoglycans	133
5.5.4. Lipopolysaccharides	134
5.5.5. Cell Surface Structures	134
5.5.5A. Plants	134
5.5.5B. Prokaryotes	134
5.5.5C. Eukaryotes	137
5.5.5D. Red Blood Cells	137
Summary	137
Selected Readings	138
Review Questions	138
Problems	139
Chapter 6. Lipids and Membranes	141
6.1. Fatty Acids	142
6.2. Simple Lipids	143
6.2.1. Formation and Hydrolysis of Fats	143
6.2.1A. Fat Formation	143
6.2.1B. Hydrolysis of Fats	144
6.2.2. Micelles, Emulsions, and Soap Action	145
6.2.2A. Emulsions	145
6.2.2B. Soap Action and Detergents	145
6.3. Complex Lipids	146
6.3.1. Glycerophospholipids	146
6.3.2. Sphingophospholipids	147
6.3.3. Glycolipids	147
6.3.4. Lipoproteins and Proteolipids	149
6.4. Derived Lipids	150
6.4.1. Prostaglandins, Thromboxanes, and Leukotrienes	150
6.4.2. Isoprenoids: Carotenoids and Terpenoids	151
6.4.3. Fat-Soluble Vitamins	151
6.4.3A. Vitamin A	151
6.4.3B. Vitamin D	152
6.4.3C. Vitamin E	154
6.4.3D. Vitamin K	154
6.4.4. Steroids	155

6.5. Biomembranes—Structural Aspects	156
6.5.1. Composition and Structure	156
6.5.1A. Membrane Composition	156
6.5.1B. Membrane Structure.	157
6.5.1C. Membrane Proteins	158
6.5.2. Fluidity and Asymmetry	158
6.5.2A. Membrane Fluidity	158
6.5.2B. Membrane Asymmetry.	159
6.6. Biomembranes—Functional Aspects	159
6.6.1. Transport across Membranes	159
6.6.1A. Passive Transport	159
6.6.1B. Facilitated Transport	160
6.6.1C. Active Transport.	162
6.6.2. The Cell Membrane and Nerve-Impulse Transmission	164
6.6.3. The Cell Membrane and Atherosclerosis	165
Summary	166
Selected Readings	167
Review Questions	168
Problems	168
 Chapter 7. Nucleic Acids	 171
7.1. Structural Components	171
7.1.1. Purines and Pyrimidines	171
7.1.2. Nucleosides	172
7.1.3. Nucleotides	175
7.1.4. Basic Nucleic Acid Structure	176
7.1.4A. 3',5'-Phosphodiester Bond	176
7.1.4B. Shorthand Notations.	176
7.1.4C. Sizes of Nucleic Acids	177
7.1.5. Occurrence and Functions of Nucleic Acids	178
7.1.5A. Nucleoproteins	178
7.1.5B. The Varied Functions of RNA	178
7.2. Primary Structure	179
7.3. Secondary Structure	180
7.3.1. Watson and Crick Double Helix	180
7.3.2. Other Nucleic Acid Duplexes	182
7.3.2A. A-DNA.	182
7.3.2B. Z-DNA	183
7.3.2C. Double-Stranded RNA.	184
7.4. Tertiary Structure of DNA—the Superhelix	184
7.5. DNA—the Genetic Material	185
7.5.1. Indirect Evidence	185
7.5.2. Direct Evidence	185
7.5.2A. Transforming Principle	185
7.5.2B. Bacteriophage Infection.	186
7.5.2C. <i>In Vitro</i> Synthesis.	186
7.5.3. Prokaryotic and Eukaryotic DNA	187
7.5.3A. Prokaryotes	187
7.5.3B. Eukaryotes	188

7.6. Properties of DNA	189
7.6.1. Degradation and Denaturation	189
7.6.1A. Extremes of pH	190
7.6.1B. Low Ionic Strength.	190
7.6.1C. High Temperature.	190
7.6.2. Renaturation and Hybridization	192
7.6.3. Restriction and Modification	193
7.7. Sequencing Nucleic Acids	194
7.7.1. Maxam–Gilbert Method	194
7.7.2. Sanger–Coulson Method	196
Summary	197
Selected Readings	198
Review Questions	199
Problems	199

PART III. METABOLISM

Chapter 8. Introduction to Metabolism.	203
8.1. Catabolism and Anabolism	203
8.1.1. Fermentation	204
8.1.1A. Alcoholic Fermentation	206
8.1.1B. Lactate Fermentation	206
8.2. Regulation of Metabolism	206
8.2.1. Metabolic Pathways	206
8.2.2. Compartmentation	207
8.2.3. Hormones	208
8.2.4. Genetic Diseases	209
8.3. Experimental Approaches to Metabolism	211
8.3.1. Levels of Cellular Organization	211
8.3.2. Radioactive Labels	211
8.3.3. Mutants	212
8.4. Nutritional Aspects	213
8.4.1. Digestion and Absorption	213
8.4.2. Dietary Nutrients	214
8.4.3. Vitamins	216
Summary	217
Selected Readings	218
Review Questions	218
Problems	218
Chapter 9. Bioenergetics	221
9.1. Free Energy	221
9.1.1. Standard and Actual Free Energy Changes	222
9.1.1A. Standard Free Energy Change	222
9.1.1B. Actual Free Energy Change	223
9.1.2. Biochemical Free Energy Changes	223
9.1.2A. Biochemical Standard Free Energy Change	223
9.1.2B. Biochemical Actual Free Energy Change	224
9.1.3. The Effects of Variables on Free Energy Changes	225
9.1.3A. The Effect of Temperature	225
9.1.3B. The Effect of Concentration.	225

9.2. Energy-Rich Compounds	226
9.2.1. Biological Oxidation	226
9.2.2. Definition of Energy-Rich Compounds	227
9.2.3. Types of Energy-Rich Compounds	228
9.2.4. Reasons for Negative ΔG° of Hydrolysis	228
9.2.4A. Resonance Stabilization	229
9.2.4B. Electrical Repulsion	229
9.2.4C. Free Energy of Ionization	229
9.3. Coupled Reactions	230
9.3.1. Linking of Reactions	230
9.3.2. Parameters of Coupled Reactions	231
9.3.3. Common Intermediate Principle	232
9.3.4. Coupling Requirements	232
Summary	232
Selected Readings	233
Review Questions	233
Problems	234
 Chapter 10. Carbohydrate Metabolism	 237
10.1. Transport and Storage of Carbohydrates	238
10.2. Glycolysis—Individual Reactions	239
10.2.1. Stage I	241
10.2.1A. Hexokinase	241
10.2.1B. Phosphoglucoisomerase	242
10.2.1C. Phosphofructokinase	242
10.2.1D. Aldolase	242
10.2.1E. Triose-Phosphate Isomerase	243
10.2.2. Stage II	243
10.2.2A. Glyceraldehyde 3-Phosphate Dehydrogenase	243
10.2.2B. Phosphoglycerate Kinase	244
10.2.2C. Phosphoglyceromutase	245
10.2.2D. Enolase	245
10.2.2E. Pyruvate Kinase	246
10.3. Glycolysis—End Products, Energetics, and Control	246
10.3.1. Aerobic and Anaerobic Conditions	246
10.3.1A. Acetyl Coenzyme A and Lactate	246
10.3.1B. The Cori Cycle	247
10.3.2. Metabolic Fates of Pyruvate	248
10.3.3. Energetics	248
10.3.4. Pasteur and Crabtree Effects	249
10.3.5. Catabolism of Other Carbohydrates	250
10.3.5A. Fructose	251
10.3.5B. Mannose	252
10.3.5C. Galactose	252
10.4. Pentose Phosphate Pathway	253
10.4.1. Oxidative Phase	253
10.4.2. Nonoxidative Phase	254
10.4.3. Functions of the Pathway	254
10.5. Glycogen Degradation and Synthesis	256
10.5.1. Glycogenolysis	256
10.5.1A. Glycogen Phosphorylase	256

10.5.1B. Interaction of Hormones with Cells	257
10.5.1C. Enzyme Cascade of Glycogenolysis	258
10.5.1D. “Fight or Flight” Response	258
10.5.2. Glycogenesis	259
10.5.2A. Glucose Activation	259
10.5.2B. Glycogen Synthase	260
10.5.2C. Regulation of Glycogenesis	261
10.6. Gluconeogenesis	263
10.6.1. Reversal of Glycolysis	264
10.6.1A. Bypass I	264
10.6.1B. Bypass II	265
10.6.1C. Bypass III	265
10.6.1D. Overall Reaction	265
10.6.2. Glucose–Alanine Cycle	265
10.6.3. Effect of Alcohol	266
10.6.4. Regulation of Gluconeogenesis	266
10.6.4A. Fructose 2,6-Bisphosphate	266
10.6.4B. Carbohydrate Catabolism and Anabolism	266
10.7. Biosynthesis of Other Carbohydrates	267
10.7.1. Polysaccharides	267
10.7.2. Oligosaccharides	268
10.7.3. Monosaccharides	268
Summary	268
Selected Readings	269
Review Questions	270
Problems	270
Chapter 11. The Citric Acid Cycle	273
11.1. Coenzymes of the Cycle	275
11.1.1. Pyridine-Linked Dehydrogenases	275
11.1.2. Flavoproteins	276
11.1.3. Coenzyme A	276
11.1.4. Lipoic Acid	278
11.1.5. Thiamine Pyrophosphate	278
11.2. Synthesis of Acetyl Coenzyme A	278
11.3. Reactions of the Cycle Proper	279
11.3.1. Citrate Synthase	281
11.3.2. Aconitase	282
11.3.3. Isocitrate Dehydrogenase	282
11.3.4. α-Ketoglutarate Dehydrogenase Complex	283
11.3.5. Succinate Thiokinase (Succinyl CoA Synthase)	283
11.3.6. Succinate Dehydrogenase	284
11.3.7. Fumarase	284
11.3.8. Malate Dehydrogenase	284
11.3.9. Overall Reaction	284
11.4. Major Features of the Cycle	284
11.5. Energetics and Control	285
11.5.1. Coupled Reactions	285
11.5.2. Efficiency	286
11.5.3. Regulatory Ratios	286
11.5.4. Anaplerotic Reactions	287
11.6. Glyoxylate Cycle	288

Summary	289
Selected Readings	290
Review Questions	290
Problems	290
 Chapter 12. Electron Transport and Oxidative Phosphorylation	293
12.1. Oxidation–Reduction Potentials	293
12.1.1. Standard Redox Potentials	293
12.1.2. Actual Redox Potentials	294
12.2. Biological Electron Carriers	295
12.2.1. Coenzyme Q (Ubiquinone)	295
12.2.2. Cytochromes	296
12.2.3. Iron–Sulfur Proteins	296
12.2.4. Comparing the Electron Carriers	297
12.3. Electron Transport System (ETS)	298
12.3.1. Chain of Electron Carriers	299
12.3.1A. From Metabolite to Cytochrome <i>c</i>	299
12.3.1B. Cytochrome Oxidase	299
12.3.1C. Pathways of Electron Transport	301
12.3.2. Sequence of ETS Components	301
12.3.2A. Respiratory Complexes	301
12.3.2B. Artificial Electron Acceptors	302
12.3.2C. Inhibitors	302
12.3.2D. Reduction Potentials of Electron Carriers	303
12.3.3. Energetics of the ETS	303
12.3.3A. ATP Synthesis	304
12.3.3B. Energy Conservation	305
12.4. Oxidative Phosphorylation	305
12.4.1. P/O Ratio	305
12.4.2. Chemiosmotic Coupling	305
12.4.3. ATP Synthase	307
12.5. Control Mechanisms	307
12.5.1. Respiratory Control	307
12.5.2. Energy Charge	307
12.5.3. Uncouplers of Oxidative Phosphorylation	308
12.5.4. Incomplete Reduction of Oxygen	308
12.6. Balance Sheet of Carbohydrate Catabolism	309
12.6.1. Theoretical Energy Yields	310
12.6.2. Shuttle Systems	310
12.6.3. Actual Energy Yields	312
Summary	312
Selected Readings	313
Review Questions	313
Problems	314
 Chapter 13. Lipid Metabolism	317
13.1. Storage of Fats	318
13.1.1. Depot Fat	318
13.1.2. Fatty Liver	318
13.2. Fat Catabolism	319
13.2.1. Degradation of Glycerol	319
13.2.2. Knoop’s Hypothesis	320

13.3. Beta Oxidation of Fatty Acids	321
13.3.1. Individual Reactions	321
13.3.1A. Thiokinase	321
13.3.1B. Carnitine Carrier System	322
13.3.1C. Acyl CoA Dehydrogenase	323
13.3.1D. Enoyl CoA Hydratase	324
13.3.1E. L-3-Hydroxyacyl CoA Dehydrogenase	324
13.3.1F. Thiolase	324
13.3.2. Energetics	325
13.3.3. Even- and Odd-Numbered Fatty Acids	326
13.3.4. Unsaturated Fatty Acids	326
13.4. Ketone Bodies	327
13.4.1. Metabolic Fates of Acetyl CoA	327
13.4.2. Properties of Ketone Bodies	327
13.4.3. Ketosis and Its Implications	328
13.5. Fatty Acid Biosynthesis	329
13.5.1. Acetyl CoA Carboxylase	329
13.5.2. Fatty Acid Synthase	330
13.5.3. Individual Reactions	332
13.5.3A. Acetyl CoA:ACP Transacylase	332
13.5.3B. Malonyl CoA:ACP Transacylase	332
13.5.3C. β -Ketoacyl-ACP Synthase	332
13.5.3D. β -Ketoacyl-ACP Reductase	333
13.5.3E. β -Hydroxyacyl-ACP Dehydratase	334
13.5.3F. Enoyl-ACP Reductase	334
13.5.3G. Palmitoyl-ACP Thioesterase	334
13.5.4. Comparison with β-Oxidation	335
13.5.5. Elongases and Desaturases	335
13.5.6. Regulation	335
13.6. Biosynthesis of Other Lipids	336
13.6.1. Acylglycerols	337
13.6.2. Phospholipids	337
13.6.2A. Glycerophospholipids	337
13.6.2B. Sphingolipids	338
13.6.3. Cholesterol	339
13.6.3A. Stage I	339
13.6.3B. Stage II	340
13.6.3C. Stage III	340
13.6.3D. Stage IV	340
13.6.3E. Stage V	341
Summary	341
Selected Readings	341
Review Questions	342
Problems	342
 Chapter 14. Amino Acid and Nucleotide Metabolism	 345
14.1. Nitrogen Utilization	345
14.1.1. Nitrogen Fixation	346
14.1.2. Nitrate Assimilation	347
14.1.3. Ammonia Fixation	348
14.1.4. Essential Amino Acids	349

14.2. Pathways of Amino Acid Metabolism	349
14.2.1. Transamination	350
14.2.2. Oxidative Deamination	351
14.2.2A. Glutamate Dehydrogenase	352
14.2.2B. Amino Acid Oxidases	352
14.2.3. Metabolic Fates of Amino Acids	353
14.2.4. Catabolism of Phenylalanine and Tyrosine	354
14.2.5. Amino Acids as Biosynthetic Precursors	355
14.2.6. Biosynthesis of Amino Acids	355
14.3. Urea Cycle	356
14.3.1. Operation of the Cycle	356
14.3.1A. Individual Reactions	356
14.3.1B. Overall Reaction	358
14.3.1C. Energetics	358
14.3.1D. Metabolic Interrelationships	359
14.3.2. Comparative Biochemistry of Nitrogen Excretion	359
14.4. Purine and Pyrimidine Metabolism	360
14.4.1. Purine Biosynthesis	360
14.4.1A. Synthesis of IMP	360
14.4.1B. Interconversions of Purine Nucleotides	361
14.4.2. Pyrimidine Biosynthesis	365
14.4.2A. Synthesis of UMP	365
14.4.2B. Interconversions of Pyrimidine Nucleotides	366
14.4.2C. Cancer Chemotherapy	369
14.4.3. Purine Catabolism	369
14.4.4. Pyrimidine Catabolism	371
Summary	371
Selected Readings	372
Review Questions	372
Problems	372
 Chapter 15. Photosynthesis	 375
15.1. The Scope of Photosynthesis	376
15.1.1. Brief Historical Perspective	376
15.1.2. Evolution of Photosynthesis	378
15.2. Light and Energy	378
15.2.1. Energy of Photons	379
15.2.2. Absorption of Light	379
15.2.3. Quantum Yield	380
15.3. Photosynthetic Machinery	380
15.3.1. Prokaryotes and Eukaryotes	380
15.3.2. Chloroplasts	381
15.3.3. Photosynthetic Pigments	382
15.3.3A. Chlorophylls	382
15.3.3B. Accessory Pigments	382
15.3.4. Photosystems I and II	383
15.4. Light Reactions	384
15.4.1. Photooxidation of Chlorophyll	384
15.4.2. Photoreduction of NADP⁺	384
15.4.3. Photooxidation of Water	385
15.4.4. Photosynthetic Phosphorylation	386

15.4.5. Balance Sheet of the Light Reactions	387
15.4.6. Efficiency of the Light Reactions	388
15.4.6A. NADPH Formation	388
15.4.6B. ATP Production	388
15.4.7. Cyclic Electron Flow	389
15.5. Dark Reactions	392
15.5.1. Ribulose 1,5-Bisphosphate Carboxylase (Rubisco)	392
15.5.2. Calvin Cycle	393
15.5.2A. Production Phase	393
15.5.2B. Regeneration Phase	395
15.5.2C. Overall Reaction	396
15.5.3. Control of the Cycle	396
15.6. Photorespiration	397
15.7. The C_4 Cycle	399
Summary	401
Selected Readings	402
Review Questions	402
Problems	403

PART IV. TRANSFER OF GENETIC INFORMATION

Chapter 16. Introduction to Molecular Biology	407
16.1. Some Basic Concepts	408
16.1.1. Replication, Transcription, and Translation	408
16.1.2. The Central Dogma of Molecular Biology	409
16.1.3. Primers, Templates, and Polymerization	409
16.2. Structure and Function of RNA	410
16.2.1. Overview of Protein Biosynthesis	410
16.2.2. Messenger RNA (mRNA)	410
16.2.3. Ribosomes and Ribosomal RNA (rRNA)	411
16.2.4. Transfer RNA (tRNA)	413
16.2.5. Small RNA	415
16.3. The Genetic Code	415
16.3.1. The Alphabet of Genetics	415
16.3.2. Deciphering the Genetic Code	417
16.3.2A. Base Composition of Codons	417
16.3.2B. Base Sequence of Codons	418
16.3.3. Characteristics of the Genetic Code	419
16.3.3A. Degeneracy of the Code	419
16.3.3B. Universality of the Code	420
16.3.3C. Evolution of the Code	420
16.3.3D. Uncoded Amino Acids	421
16.3.3E. Wobble Hypothesis	421
Summary	421
Selected Readings	422
Review Questions	422
Problems	423

Chapter 17. Replication—The Synthesis of DNA	425
17.1. Semiconservative Replication	425
17.2. DNA Polymerase	426
17.2.1. DNA Polymerase I in Prokaryotes	427
17.2.2. Exonuclease Activities in Prokaryotes	428
17.2.3. DNA Polymerases II and III in Prokaryotes	428
17.2.4. Eukaryotic DNA Polymerases	429
17.3. Characteristics of the Replicating System	430
17.3.1. The Polarity Problem	430
17.3.2. Initiation Points	431
17.3.3. Movement of Replication Forks	431
17.4. Mechanism of DNA Replication	433
17.4.1. Unwinding of the Double Helix	433
17.4.2. Discontinuous DNA Synthesis	434
17.4.3. RNA Primers	435
17.4.4. Sequence of Events at the Replication Fork	436
17.4.5. Replication in Eukaryotes	438
17.5. Integrity of DNA Structure	438
17.5.1. Fidelity of DNA Replication	438
17.5.2. Mutations	439
17.5.3. DNA Repair Mechanisms	440
17.5.3A. Direct Reversal of Damaging Reaction	440
17.5.3B. Excision Repair	440
17.5.3C. Mismatch Repair	442
17.5.3D. Recombination Repair	442
17.5.3E. SOS Repair	443
17.5.4. Genetic Recombination	443
17.5.5. Transposition	444
17.6. Special Mechanisms of Replication	445
17.6.1. Mitochondrial DNA	445
17.6.2. Single-Stranded DNA	446
17.6.3. Viral RNA	446
Summary	448
Selected Readings	449
Review Questions	449
Problems	450
Chapter 18. Transcription—The Synthesis of RNA	453
18.1. Initiation of Transcription	454
18.1.1. RNA Polymerases	454
18.1.2. Promoters	454
18.1.3. Mechanism of Initiation	455
18.2. Elongation and Termination	456
18.3. Posttranscriptional Processing	458
18.3.1. Processing of Ribosomal and Transfer RNAs	458
18.3.2. Processing of Messenger RNA	458
18.3.2A. Exon Splicing	458
18.3.2B. Capping	459
18.3.2C. Polyadenylation	460
18.3.3. Self-Splicing RNAs	460

18.4. Reverse Transcription	460
18.4.1. Reverse Transcriptase	460
18.4.2. Human Immunodeficiency Virus (HIV)	463
18.4.3. Oncogenes and Proto-Oncogenes	464
18.5. Gene Regulation in Prokaryotes	464
18.5.1. Enzyme Induction and Repression	464
18.5.2. The Operon Hypothesis	465
18.5.3. The <i>lac</i> Operon	467
18.5.4. The <i>trp</i> Operon	468
18.5.4A. Secondary Promoter	469
18.5.4B. Attenuation	469
18.6. Gene Regulation in Eukaryotes	470
18.6.1. Untranscribed DNA	470
18.6.2. Repetitive DNA	470
18.6.3. Transcriptional Controls	471
18.6.4. Other Regulatory Aspects	471
Summary	472
Selected Readings	473
Review Questions	473
Problems	474
Chapter 19. Translation—The Synthesis of Protein	477
19.1. Principles of Protein Biosynthesis	477
19.1.1. Overview of Translation	477
19.1.2. Ribosomes—Sites of Protein Synthesis	478
19.1.2A. Alignment of Ribosome and mRNA	478
19.1.2B. Binding Sites on the Ribosome	478
19.1.2C. Ribosome Cycle	479
19.1.3. Directionality in Translation	480
19.1.3A. Synthesis of Polypeptide Chains	480
19.1.3B. Translation of Messenger RNA	481
19.1.3C. Simultaneous Transcription and Translation	482
19.2. Stage 1: Amino Acid Activation	483
19.2.1. Formation of Aminoacyl Adenylate	483
19.2.2. Formation of Aminoacyl-tRNA	483
19.2.3. Energetics of Amino Acid Activation	484
19.2.4. Fidelity of Aminoacyl-tRNA Synthetase	485
19.3. Stage 2: Initiation	486
19.3.1. Role of Methionine	486
19.3.2. Initiator tRNA	486
19.3.3. Mechanism of Initiation	487
19.3.4. Initiation in Eukaryotes	489
19.4. Stage 3: Elongation	489
19.4.1. Aminoacyl-tRNA Binding	489
19.4.2. Peptide Bond Formation	490
19.4.3. Translocation	492
19.5. Stage 4: Termination	492
19.6. Energetics and Control	493
19.6.1. Energy Considerations	493
19.6.2. Regulation of Protein Synthesis	494
19.6.3. Effects of Antibiotics	494

19.7. Stage 5: Posttranslational Modifications	496
19.7.1. Folding and Processing	496
19.7.2. Protein Targeting	496
19.7.3. Protein Degradation	497
Summary	499
Selected Readings	499
Review Questions	500
Problems	500
Appendix A. Acid–Base Calculations	503
A.1. Ionic Strength	503
A.2. pH	503
A.3. Henderson–Hasselbalch Equation	503
A.4. Buffers	504
Appendix B. Principles of Organic Chemistry	507
B.1. Functional Groups	507
B.2. Polar Reactions	507
B.3. Chirality	507
B.4. Optical Isomerism	508
B.5. Conformation and Configuration	509
B.6. D, L and R, S Systems	509
Appendix C. Tools of Biochemistry	511
C.1. Spectrophotometry	511
C.2. Chromatography	511
C.2.1. Adsorption Chromatography	511
C.2.2. Ion-Exchange Chromatography	512
C.2.3. Partition Chromatography	513
C.2.4. Gel-Filtration Chromatography	513
C.3. Centrifugation	513
C.3.1. Analytical Ultracentrifugation	515
C.3.2. Density Gradient Centrifugation	515
C.4. Electrophoresis	517
C.5. Radioactivity	518
C.6. Recombinant DNA Technology	518
C.6.1. Selection of Target DNA Fragment	519
C.6.2. Production of Recombinant DNA	519
C.6.3. Insertion of Recombinant DNA into Host Cells	520
C.6.4. Selection of Cells Containing Cloned DNA	520
C.6.5. Polymerase Chain Reaction	520
Appendix D. Oxidation–Reduction Reactions	523
D.1. Half-Reactions	523
D.2. Direction of Redox Reactions	523
D.2.1. Standard Conditions	524
D.2.2. Actual Conditions	525
Answers to Problems	527
Index	549
