

Table of Contents

1	<i>SPARTAN</i>: A Window into Computational Chemistry	1
<hr/>		
2	A <i>SPARTAN</i> Tutorial	3
<hr/>		
2.1	Building Molecules from Atomic Fragments	4
	Acetonitrile	4
2.2	Building Molecules from Functional Groups and Rings	15
	Furfural	16
	Camphor	21
2.3	Building Inorganic and Organometallic Molecules	24
	Sulfur Tetrafluoride	24
	Dicyclopentadienyl, Methyl Tantalum Methylidene	27
2.4	Flexible Molecules	29
	Cyclooctene	29
	Vinyl, Allyl Ether	33
2.5	Building and Locating Transition States	35
	Pyrolysis of Ethyl Formate	35
	Addition of Singlet Difluorocarbene to Ethylene and to Cyclohexene	40
2.6	Building Polypeptides	44
	Glycine Tripeptide	44
<hr/>		
3	Electronic Structure Models	49
<hr/>		
3.1	<i>Ab Initio</i> Models	49
3.2	Density Functional Models	53
3.3	Semi-Empirical Models	54
3.4	Selection of Appropriate Electronic Structure Models	55

4	Performance of Electronic Structure Models	57
4.1	Equilibrium Geometries	57
4.2	Transition State Geometries	61
4.3	Reaction Thermochemistry	62
4.4	Reaction Kinetics	65
5	Practical Strategies for Electronic Structure Calculations	67
5.1	Finding Equilibrium Geometries	67
5.2	Finding and Verifying Transition States	70
5.3	Choice of Geometry for Thermochemical and Kinetic Comparisons	75
Appendix A SPARTAN		81
A.1	Architecture	81
A.2	Capabilities and Limitations	84
Appendix B Operation of SPARTAN		87
B.1	Starting and Quitting SPARTAN	87
B.2	Pull-down Menus	87
B.3	Keystroke Equivalents	88
B.4	Use of the Mouse	89
B.5	Molecule Selection	89
B.6	Collections of Molecules	90
B.7	Changing Colors and Setting Preferences	91
B.8	3-Dimensional Displays	92
B.9	Iconizing SPARTAN	92
Appendix C Directory of SPARTAN'S MAIN MENUS		93
References		97
