Preface	xiii
Acknowledgments	xv
Contributors	xvi
1 INTRODUCTION	
1.1 Background	2
1.2 History of Visualization	3
1.3 Visualization Tools	7
1.4 A Look to the Future	8
2 APPLICATION VISUALIZATION SYSTEM	
2.1 Introduction	12
2.2 Scientific Visualization	13
2.3 AVS Overview	15
<i>AVS Modules</i>	16
<i>AVS Networks</i>	19
<i>AVS Viewers</i>	20
2.4 Visualizing the Electrostatic Potential	21
<i>Single Isosurface Display</i>	23
2.5 Summary	27
APPENDIX A: AVS Datatypes	28
<i>AVS Fields</i>	30
APPENDIX B: Creating an AVS Module	32
<i>Module Layout</i>	33
APPENDIX C: AVS Molecules	36

3 QUANTUM CHEMISTRY VISUALIZATION USING THE AVS CHEMISTRY VIEWER

- 3.1** Introduction 42
- 3.2** A Brief History of the AVS Chemistry Viewer 44
- 3.3** Methods and Materials 45
- 3.4** Application 1: Study of the Nazarov Cyclization 46
 - Preparation of a Molecule and the Quantum Calculation* 47
 - Analysis of the Output: Geometry and Orbitals* 48
- 3.5** Application 2: Nonlinear Optical Properties, Orbital Perturbation, and Charge Density 50
 - Animation of Hexatriene Molecular Orbital Response to an External Electric Field* 51
 - The Animation Procedure* 52
 - AVS Command Line Interpreter* 55
 - p-Nitroaniline Electron Density Perturbation in an Electric Field* 56
 - Implications of this Work* 58
- 3.6** Future Directions 58

4 VISUALIZING ENZYME ELECTROSTATICS WITH IBM VISUALIZATION DATA EXPLORER

- 4.1** Introduction 62
 - History and Design* 63
 - Capabilities* 63
- 4.2** Problem Statement 64
- 4.3** Methodology 65
 - Approaches to Molecular Modeling* 65
 - Data-Flow Programming* 66
 - Data Structures and Molecular Data* 67
 - External Computations* 69
- 4.4** Building a Visual Program 70
 - Input Preparation* 70
 - Display and Computation* 73
 - Control and Interaction* 74
 - Customization* 74
- 4.5** Examining the Hypothesis 76

4.6	Conclusion	77
4.7	Summary and Future Directions	77
	APPENDIX: Data-Flow Glossary	78
5	INTERACTIVE VISUALIZATION OF MOLECULAR SCENARIOS WITH MOLCAD/SYBYL	
5.1	Introduction	84
5.2	Models in Chemistry	85
	<i>Conventional Model Approach</i>	85
	<i>Mathematical Models</i>	86
5.3	Visualization of Computer-Generated Information	86
	<i>Dotted Surfaces and Triangle Mesh Generation</i>	86
	<i>Iso-surfaces and Marching Cube Algorithm</i>	87
5.4	Visualization Tools	88
	<i>Molecular Surfaces</i>	89
	<i>Mapping of Information on Molecular Surfaces</i>	90
	<i>Iso-surfaces for Molecular Properties</i>	91
	<i>Vector Fields</i>	91
5.5	Specific Features	91
	<i>Electrostatic Potentials, Lipophilicity Maps, and Electric Fields</i>	92
	<i>Quantification of Roughness for Molecular Surfaces</i>	92
	<i>Curvature Analysis for Molecular Surfaces</i>	93
	<i>Subdivision of Molecular Surfaces by Fuzzy Logic Strategies</i>	93
5.6	An Application: Modification of the “Sweetness Triangle” Concept	94
5.7	Conclusion and Outlook	95
6	MOLECULAR SURFACE COMPARISON USING ANACONDA	
6.1	Introduction	100
	<i>Drug Design</i>	100
	<i>Complementarity</i>	100
6.2	Molecular Comparison	102

6.3	Molecular Surface Comparison	103
	<i>How Different Surfaces Can Be Compared</i>	104
	<i>Background to Anaconda</i>	104
	<i>Principles of Anaconda</i>	105
6.4	Displaying the Projections	107
6.5	Gnomonic Projection Restricts the Search Space	107
6.6	Data Preparation and User Interface	109
	<i>Data File Formats</i>	109
	<i>User Interface</i>	110
6.7	Comparison with Other Methods	113
6.8	Example Applications	114
	<i>Application to Beta-Lactam Antibiotics</i>	115
	<i>Application to Rolipram and Denbufylline</i>	119
	<i>Sensitivity to the Choice of the COI</i>	121
	<i>Conclusions</i>	122
	APPENDIX A: Technical Details	123
	<i>Gnomonic Projection</i>	123
	<i>Effect on the Projection of Rotation</i>	124
	APPENDIX B: CSSR File Format	124
	APPENDIX C: Field File Format	125
	<i>Field Header File</i>	125
	<i>Field Value File</i>	127

7 VISUALIZATION APPROACHES IN QUANTUM CHEMISTRY USING UNICHEM

7.1	Introduction	132
7.2	Computational Methods	135
	<i>Basic Sets</i>	136
	<i>Hartree-Fock Methods</i>	137
	<i>Post-Hartree-Fock Methods</i>	138
	<i>Density Functional Theory</i>	139
7.3	Model Calculations	141
7.4	Job Setup Using UniChem	142
	<i>Molecular Structure Input</i>	142
	<i>Additional Input Considerations</i>	143
	<i>Geometry Optimization</i>	144
	<i>Molecular Properties</i>	146

7.5	Submitting and Monitoring a Job	147
7.6	Output from an Energy Calculation	148
	<i>Volumetric Quantities</i>	149
	<i>Molecular Vibrational Frequencies</i>	151
7.7	Summary	155
8	VISUALIZING ELECTROSTATIC INTERACTIONS WITH INSIGHT II	
8.1	Introduction	162
	<i>Origin of Insight II</i>	162
	<i>Original Design Criteria</i>	162
	<i>Current Application Areas</i>	163
8.2	Gramicidin A: An Important Model for Ion Transport Across Biological Membranes	163
	<i>Significance of Transporting Ions Across Membranes in Living Systems</i>	164
	<i>Structure and Mechanism of Gramicidin A</i>	164
	<i>Ion Selectivity</i>	165
	<i>How Does a Neutral Channel-Forming Peptide Select Between Negative and Positive Ions So Dramatically?</i>	166
8.3	Calculating Electrostatic Potentials for Gramicidin	166
	<i>Building the Initial Structure</i>	166
	<i>Sampling Conformational Space and Flexibility (Molecular Dynamics with Discover)</i>	167
	<i>Taking into Account Solvent, Membrane, and Ionic Strength</i>	168
8.4	Visualizing Electrostatic Potentials	170
	<i>Displaying the Molecular Structure</i>	170
	<i>Displaying 3-D Isoenergy Contours</i>	172
	<i>Visualizing Dielectric Boundaries</i>	174
	<i>Rendering Solid Contours</i>	175
	<i>Displaying Cross Sections</i>	176
8.5	How Electrostatic Potentials Help Explain Ion Selectivity	176
	<i>Potentials in an Ion-Free Gramicidin</i>	176
	<i>Energy of an Ion Crossing the Channel</i>	177
	<i>The Role 3-D Visualization Plays in Analyzing Electrostatic Potentials</i>	181

9 CERIUS² MOLECULAR MODELING SOFTWARE FOR INDUSTRIAL APPLICATIONS

- 9.1 Introduction 184
- 9.2 Construction of a State-of-the-Art Visualizer 185
 - Core Components* 185
 - The Cerius² Visualizer* 186
 - Model Enhancement Features* 187
 - Display Styles* 187
 - Additional Features* 189
 - Sketcher and Crystal Building* 190
 - Editing Tools* 191
 - Graphical-Data Treatment* 194
 - Summary* 194
- 9.3 Use of Zeolites for Gas Separation 194
 - Choosing and Building the Model* 195
 - Limitations of Adsorption Simulations* 196
 - Monte Carlo Adsorption in Li-X* 197
 - Analysis of Adsorption Isotherms* 198
 - Summary* 201
- 9.4 Crystal Habit Modification of a Thermal-Transfer Printing Dye 201
 - Introduction to Thermal-Transfer Printing Dye Technology and Morphology Prediction* 201
 - Morphology Prediction and Visualization* 202
 - The Search for Tailor-Made Additives* 204
 - Summary* 205
- 9.5 Polymorphism in Pharmaceuticals 205
 - Bioavailability* 206
 - Polymorphism in Chloramphenicol Palmitate* 206
 - Visualization Studies on Chloramphenicol Palmitate* 207
 - Summary* 208
- 9.6 Miscibility and Blends Behavior of Polymeric Systems 209
 - Strategy for Polymers Studies* 209
 - Polymers and Visualization* 210
 - Summary* 211
- 9.7 Conclusions 212

10 THE CACHE WORKSYSTEM AND MOLECULAR MECHANICS: COORDINATION OF DBT ON MoS₂

10.1 Introduction 216

History and Design Criteria 216

Capabilities 216

10.2 Problem Statement 217

Chemistry 217

The Chianelli–Daage Rim–Edge Model 219

10.3 Methodology 220

Molecular Mechanics 220

Benchmarking 220

Describing the Chianelli–Daage Rim–Edge Model 221

Questions Regarding the Rim–Edge Model 222

10.4 Implementation 222

Data Input to CAChe 222

Benchmarking 223

Dibenzothiophene on MoS₂: General Considerations and Conditions Used in the Computations 228

Sulfur-Rich Rim Model and η^1 -Coordinated Dibenzothiophene 229

Sulfur-Rich Edge Model and η^1 -Coordinated Dibenzothiophene 230

Rim Versus Edge: Sulfur-Rich Models Compared 231

Sulfur-Poor Rim Model of η^1 -Coordinated Dibenzothiophene 232

Sulfur-Poor Edge Model of η^1 -Coordinated Dibenzothiophene 233

Hydrogenation Versus Hydrodesulfurization: General Considerations 235

Hydrogenation Pathway 235

How Many Sulfur-Free Molybdenum Atoms Constitute a Sulfur-Deficient Site? 238

10.5 Analysis 240

Rim Versus Edge: Sulfur-Rich Model 240

Rim Versus Edge: Sulfur-Poor Model and Hydrogenation 240

Hydrogenation 241

Size of Site for Dibenzothiophene Coordination on MoS₂ 241

Implications to Catalytic Chemistry 241

10.6 Conclusion 242

APPENDIX: Abbreviations and Chemical Terms Used 243

11 VISUALIZATION AND REPRESENTATION IN CHEMICAL EDUCATION USING HYPERCHEM

11.1 Introduction 248

The Art of Chemistry 248

Representation in Chemistry 249

The Computer Graphical Representation 250

11.2 HyperChem 251

11.3 New Solutions to Chemical Education Problems 252

A Molecular Structure Problem 252

A Chemical Reaction Problem 254

11.4 Implementation 258

Scripts 258

Dynamic Data Exchange 258

Molecular Dynamics Simulations 259

Movies 261

11.5 Analysis 261

APPENDIX: Scripts for Preparing HyperChem

Movies 262

Script 1 262

Script 2 263

12 VISUALIZATION SUPPLIER REFERENCE

12.1 Overview 266

12.2 Visualization Features 267

12.3 Tool Applicability 268

12.4 Vendor Data 269

Index 273
