## Part I The fundamentals

1	Molecular structures and the states of matter	3
2	Electrons in atoms	35
3	Electrons in molecules: diatomics	91
4	Electrons in molecules: polyatomics	137
5	Bonding in solids	179
6	Thermodynamics and the Second Law	201
7	Trends in bonding	261
8	Describing reactions using orbitals	311
9	Organic chemistry 1: functional groups	339
10	The rates of reactions	409

## Part II Going further

11	Spectroscopy	447
12	Organic chemistry 2: three-dimensional shapes	519
13	Organic chemistry 3: reactions of $\pi$ systems	557
14	Main-group chemistry	611
15	Transition metals	649
16	Quantum mechanics and spectroscopy	689
17	Chemical thermodynamics	755
18	Chemical kinetics	797
19	Electrochemistry	831
20	Dimensions, units and some key mathematical ideas	875

## Part I The fundamentals

1	Molecular structures and the states of matter	3
1.1	Types of bonding	4
1.2	Weaker non-bonded interactions	6
1.3	Solids	9
1.4	Structure determination by X-ray diffraction	10
1.5	Where are the bonds?	13
1.6	How to draw molecules	15
1.7	Common names and abbreviations	17
1.8	Predicting the shapes of molecules using VSEPR	18
1.9	The ideal gas	22
1.10	Molecular energy levels	26
1.11	Moving on	29
	Questions	29
2	Electrons in atoms	35
2.1	Introducing quantum mechanics	36
2.2	Introducing orbitals	39
2.3	Hydrogen atomic orbitals	44
2.4	Spin	63
2.5	Hydrogen-like atoms	65
2.6	Multi-electron atoms	65
2.7	Ionization energies	80
2.8	Moving on	85
	Further reading	86
	Questions	86
3	Electrons in molecules: diatomics	91
3.1	Introducing molecular orbitals	92
3.2	H <sub>2</sub> , He <sub>2</sub> and their ions	104
3.3	Homonuclear diatomics of the second period	105
3.4	Photoelectron spectra	125
3.5	Heteronuclear diatomics	126
3.6	Moving on	134
	Further reading	135

Questions	135
<b>4 Electrons in molecules: polyatomics</b>	<b>137</b>
4.1 The simplest triatomic: $H_3^+$	138
4.2 More complex linear triatomics	144
4.3 MOs of water and methane	146
4.4 Hybrid atomic orbitals	150
4.5 Comparing the hybrid and full MO approaches	156
4.6 Extending the hybrid concept	159
4.7 Bonding in organic molecules	162
4.8 Delocalized bonding	165
4.9 Delocalized structures including heteroatoms	173
4.10 Moving on	176
Further reading	176
Questions	176
<b>5 Bonding in solids</b>	<b>179</b>
5.1 Metallic bonding: introducing bands	180
5.2 Ionic solids	189
5.3 Moving on	197
Further reading	197
Questions	198
<b>6 Thermodynamics and the Second Law</b>	<b>201</b>
6.1 Spontaneous processes	202
6.2 Properties of matter: state functions	204
6.3 Entropy and the Second Law	205
6.4 Heat, internal energy and enthalpy	212
6.5 Entropy in terms of heat	214
6.6 Calculating the entropy change of the Universe	217
6.7 Gibbs energy	220
6.8 Chemical equilibrium	222
6.9 Finding the standard Gibbs energy change	227
6.10 Interpreting the value of $\Delta_r G^\circ$	233
6.11 $\Delta_r H^\circ$ and $\Delta_r S^\circ$ for reactions not involving ions	235
6.12 $\Delta_r H^\circ$ and $\Delta_r S^\circ$ for reactions involving ions in solution	238
6.13 Applications	241
6.14 Acidity, basicity and $pK_a$	245
6.15 How much product is there at equilibrium?	252
6.16 Moving on	257
Further reading	257
Questions	258

<b>7 Trends in bonding</b>	<b>261</b>
7.1 Electronic configuration and the periodic table	262
7.2 Orbital energies and effective nuclear charges	265
7.3 Atomic sizes across the periodic table	273
7.4 Ionization energies and electron affinities	276
7.5 Summary of the trends in orbital energies and sizes	281
7.6 Bonding in the elements – non-metals	281
7.7 Metallic structures	289
7.8 The transition from metals to non-metals	294
7.9 Bonding between the elements	297
7.10 Oxidation states	303
7.11 Moving on	306
Further reading	306
Questions	306
<b>8 Describing reactions using orbitals</b>	<b>311</b>
8.1 The redistribution of electrons in a reaction	311
8.2 HOMO–LUMO interactions	315
8.3 Interactions involving nonbonding LUMOs	318
8.4 Interactions involving $\pi$ antibonding LUMOs	323
8.5 Interactions involving $\sigma$ antibonding LUMOs	326
8.6 Summary of the effects of different HOMO–LUMO interactions	328
8.7 The role of protonation in reactions	329
8.8 Intramolecular orbital interactions	331
8.9 Rearrangement reactions	333
8.10 Moving on	335
Questions	336
<b>9 Organic chemistry 1: functional groups</b>	<b>339</b>
9.1 Functional groups	340
9.2 Changing functional group level	345
9.3 Level two to level one – carbonyl addition reactions	350
9.4 Transformations within functional group level two	355
9.5 Transformations within functional group level three	365
9.6 Moving down from functional group level three	382
9.7 Transformations within level one	390
Further reading	403
Questions	403
<b>10 The rates of reactions</b>	<b>409</b>
10.1 The rate of a reaction	410
10.2 Rate laws	412
10.3 Temperature dependence	415
10.4 The energy barrier to reaction	416
10.5 Elementary reactions and reaction mechanisms	419
10.6 Reactions in solution	421

10.7	Sequential reactions	422
10.8	Analysing the kinetics of complex mechanisms	428
10.9	Chain reactions	434
	Further reading	439
	Questions	440

## Part II Going further

11	Spectroscopy	447
11.1	Mass spectrometry	448
11.2	Spectroscopy and energy levels	458
11.3	IR spectroscopy – introduction	461
11.4	Interpreting IR spectra	469
11.5	Nuclear Magnetic Resonance (NMR)	477
11.6	Coupling in NMR	487
11.7	More complicated coupling patterns – proton NMR	499
	Further reading	509
	Questions	509
12	Organic chemistry 2: three-dimensional shapes	519
12.1	The relationships between isomers	520
12.2	The effect of rotations about bonds	523
12.3	Isomerism in alkenes	528
12.4	Enantiomers and chirality	530
12.5	Symmetry and chirality	539
12.6	The conformation of cyclic molecules	542
12.7	Moving on	553
	Further reading	553
	Questions	554
13	Organic chemistry 3: reactions of $\pi$ systems	557
13.1	Elimination reactions – the formation of alkenes	559
13.2	Electrophilic addition to alkenes	568
13.3	Enols and enolates	580
13.4	The reactions of enols and enolates	586
13.5	Introduction to aromatic systems	593
	Further reading	607
	Questions	607
14	Main-group chemistry	611
14.1	Overview	612
14.2	Key concepts in main-group chemistry	614
14.3	Hydrolysis of chlorides	622
14.4	Oxides	630
14.5	Brief survey of the chemistry of each group	631

14.6 Moving on	644
Further reading	644
Questions	645
<b>15 Transition metals</b>	<b>649</b>
15.1 Orbital energies and oxidation states	651
15.2 Complexes	654
15.3 Bonding in octahedral complexes	656
15.4 High-spin and low-spin octahedral complexes	663
15.5 Magnetic and spectroscopic properties of complexes	666
15.6 Consequences of the splitting of the <i>d</i> orbitals	669
15.7 Tetrahedral and square-planar complexes	672
15.8 Crystal-field theory	674
15.9 Organometallic complexes	675
15.10 Aqueous chemistry and oxoanions	681
15.11 Moving on	684
Further reading	684
Questions	685
<b>16 Quantum mechanics and spectroscopy</b>	<b>689</b>
16.1 The postulates of quantum mechanics	691
16.2 A free particle moving in one dimension	697
16.3 Particle in a box	701
16.4 Particle in a two-dimensional square well	710
16.5 The harmonic oscillator	711
16.6 Spectroscopy and energy levels	719
16.7 The IR spectrum of a diatomic	722
16.8 Vibrations of larger molecules	731
16.9 Raman spectroscopy	733
16.10 Summary of the features of vibrational spectroscopy	735
16.11 The rigid rotor	736
16.12 The microwave spectrum of a diatomic	737
16.13 Vibration–rotation spectrum of a diatomic	743
16.14 The hydrogen atom	747
16.15 Electronic transitions	749
Further reading	751
Questions	751
<b>17 Chemical thermodynamics</b>	<b>755</b>
17.1 The First Law	756
17.2 Work of gas expansions	759
17.3 Internal energy, enthalpy and heat capacity	766
17.4 The Gibbs energy	771
17.5 The mixing of ideal gases	774
17.6 Chemical equilibrium	776
17.7 Equilibria involving other than gases	783

17.8	Determination of the standard Gibbs energy change	785
17.9	The temperature dependence of the equilibrium constant	788
17.10	Determination of absolute entropies	792
	Further reading	793
	Questions	793
<b>18</b>	<b>Chemical kinetics</b>	<b>797</b>
18.1	Measuring concentration	798
18.2	Integrated rate laws	805
18.3	Other methods of analysing kinetic data	814
18.4	Collision theory	814
18.5	Potential energy surfaces	819
18.6	Transition state theory	821
	Further reading	825
	Questions	825
<b>19</b>	<b>Electrochemistry</b>	<b>831</b>
19.1	Electrochemical cells	832
19.2	Thermodynamic parameters from cell potentials	836
19.3	The Nernst equation and standard cell potentials	839
19.4	The spontaneous cell reaction	846
19.5	Summary	846
19.6	Types of half cells	848
19.7	Assessing redox stability using electrode potentials	851
19.8	The limits of stability in aqueous solution	854
19.9	Using cell potentials to determine thermodynamic parameters	856
19.10	Oxidation state diagrams	861
19.11	Measurement of concentration	866
	Further reading	869
	Questions	870
<b>20</b>	<b>Dimensions, units and some key mathematical ideas</b>	<b>875</b>
20.1	Dimensional analysis	876
20.2	Units	882
20.3	Trigonometric functions	890
20.4	The exponential function	895
20.5	Calculus: differentiation	900
20.6	Calculus: integration	905
20.7	Differential equations	910
	Further reading	912
	Answers to self test exercises	912
	Questions	913
