PART I KYOTO

1	Key instrumental and institutional design issues in climate change policy	3
	<i>Michael Faure, Joyeeta Gupta and Andries Nentjes</i>	
2	The Kyoto mechanisms and the economics of their design	25
	<i>Luke Brander</i>	
3	Alternative design options for emissions trading: a survey and assessment of the literature	45
	<i>Jan-Tjeerd Boom and Andries Nentjes</i>	
4	To design and implement climate change measures and the need to strike a balance between environmental protection and international trade law	68
	<i>David Grimeaud</i>	
5	Developing carbon trading in Europe: does grandfathering distort competition and lead to state aid?	108
	<i>Edwin Woerdman</i>	
6	Legal aspects of the Dutch approach to CO ₂ reduction	128
	<i>Chris Backes and Reinske Teuben</i>	
7	Legal feasibility of emissions trading: learning points from emissions trading for ozone-depleting substances	147
	<i>Marjan Peeters</i>	
8	CDM in climate policies in the Netherlands: a promising tool?	171
	<i>Rianne de Leeuw and Ekko C. van Ierland</i>	
9	Optimal institutional arrangements and instruments for the promotion of energy from renewable sources	195
	<i>Jan C. Bongaerts and George Dogbe</i>	
10	Domestic capacity, regional institution and global negotiations: lessons from the Netherlands–EU Kyoto Protocol negotiation	230
	<i>Norichika Kanie</i>	

11	Global environmental change regimes: impact assessment on the basis of an extended GTAP model <i>Shunli Wang, Peter Nijkamp and Onno Kuik</i>	248
PART II AFTER KYOTO		
12	The multi-sector convergence approach to global burden sharing of greenhouse gas reductions <i>Jos J.C. Bruggink</i>	279
13	The Dutch energy transition and its institutional problems: report from a stakeholder assessment <i>Matthijs Hisschemöller</i>	292
14	Modulating dynamics in transport for climate protection <i>René Kemp and Ellen Moors</i>	312
15	Institutional change in Europe and the implications for climate control measures <i>Graham Bennett</i>	340
	<i>Index</i>	351

Figures

1.1	Per capita emission allowances	15
2.1	Supply and demand for emission reductions from the Kyoto mechanisms	27
6.1	Tradable reductions	137
6.2	Tradable reductions and BAT	143
8.1	Exclusion, selection and contract-award criteria in the ERUPT tender procedure	174
8.2	The former position of CDM under the Minister of Development Cooperation	175
8.3	Project emissions and four baselines	184
9.1	EU15 energy imports, 1980-1999	197
9.2	Share of renewables in the total energy balance, EU15, 1980-1999	198
9.3	EU renewable energy, production by member states	200
9.4	Share of renewable energy production by technology, EU15, 1997	202
9.5	Electricity consumption as a share of total energy consumption, EU15	203
9.6	Share of hydro in renewable electricity production, EU15	205
10.1	Three modes of leadership in international multilateral negotiation	231
11.1	First level of production structure for output of industry j in region r in GTAP-E	253
11.2	The value-added nest and composite intermediates nest in GTAP-E	254
11.3	The production of energy in GTAP-E	255
11.4	Impact of carbon tax as a result of CDM	265
11.5	Decomposition of carbon leakage for ROW by regimes USA_P and USA_P+CDM	266
11.6	Relative magnitude of CDM effect with regard to US participation regimes	269
11.7	Relative magnitude of CDM effect with regard to US non-participation case	270
12.1	Per capita total emission allowances	288
14.1	Types of policies involved in managing the transition to sustainable transport	335

Tables

1.1	Conflicting views on transition towards a decarbonized economy	17
2.1	Use of the Kyoto mechanisms and domestic action in meeting the estimated Annex I reduction requirement, 2010	29
2.2	Kyoto mechanisms and domestic action as a percentage of the Annex I reduction requirement, 2010	29
2.3	US and rest of Annex I reduction requirements, 2010	40
8.1	Results of calculations of baselines and emission reductions for the Philippines case study	183
8.2	Results of calculations of baselines and emission reductions for the Egypt case study	186
8.3	Total costs and emission reductions for scenarios 2 and 3 compared to baseline scenario 1	189
9.1	EU15 primary energy consumption and production, 1980-1999	196
9.2	Share of renewable energy in inland energy consumption	199
9.3	Capacities of renewable energy installed in gross MW, 1997	201
9.4	Share of hydro in inland renewable electricity generation	204
9.5	Total renewable inland electricity generation	206
9.6	Comparative cost of renewable and other electricity, selected IEA countries	207
9.7	Schemes for electricity from RES in the EU member states	222
10.1	Greenhouse gas reduction target in 2010 relative to 1990	238
11.1	Regime possibilities under analysis	257
11.2	CO ₂ emission content in the GTAP-E model	258
11.3	Carbon emission target and carbon tax for USA_P and USA_NP	259
11.4	Indicators for international competitiveness for USA_P and USA_NP	261
11.5	Emission reductions and carbon tax for CDM regimes	264
11.6	Macroeconomic indicators for CDM regimes	268
11.7	Emission reductions, carbon tax and macroeconomic indicators for different assumptions on baseline calculations under USA_P+CDM	272
12.1	Input data for MSC burden-sharing rule	288
13.1	Findings for the four sectors in 2050	302

13.2	Views on institutions needed for realizing the transition towards –80 per cent greenhouse gas emissions by 2050	304
