Notations 1

Introduction 3

1 A Formal Framework for Qualitative Reasoning 9

1.1 Qualitative Modelling 12

1.1.1 Transformation of Relations 13

1.1.2 The Approximation Principle 16

1.1.3 Abstract and Concrete Models 18

1.1.4 Complexity of a Model 19

1.1.5 Information Measures 20

1.2 Qualitative Reasoning 22

1.2.1 Properties of Reasoning Methods 23

1.2.2 Approximative Reasoning 27

1.3 Numerical Approaches 30

1.3.1 Modelling and Reasoning with Discrete State Spaces 30

1.3.2 Numerical Reasoning with Abstract Models 32

1.4 Applications 35

1.4.1 Order of Magnitude Reasoning 35

1.4.2 Qualitative Reasoning at Multiple Resolutions 38

1.5 Summary 44

2 Introducing Uncertainty into Qualitative Reasoning 47

2.1 Uncertain Qualitative Modelling 48

2.1.1 Modelling Uncertainty in Qualitative Reasoning 48

2.1.2 Transformation of Relations 51

2.2 Uncertain Qualitative Reasoning 57

2.2.1 Propagating Uncertain Constraints 57

2.2.2 Approximative Probabilistic Reasoning 61
2.2.3 Uncertain Hierarchical Constraint Propagation 62
2.3 Fuzzy Set Theory 65
2.3.1 Qualitative Reasoning and Fuzzy Systems 65
2.3.2 Reasoning with Fuzzy Relations 68
2.4 Summary and Further Remarks 70

3 Modelling of Uncertain Functional Relationships 73
3.1 A Rule-based Approach to Linguistic Modelling 74
3.1.1 Rule-based Modelling 76
3.1.2 Existence of Associated Functions 78
3.1.3 Properties of Associated Functions 82
3.2 An Approximation Theorem 88
3.2.1 Fuzzy Systems 89
3.2.2 Universal Approximation Property 93
3.2.3 Semantic Interpretation 95
3.3 Modelling with Uncertain Data 97
3.3.1 Fuzzy and Probability Measures 98
3.3.2 Estimation of Confidence Relations 101
3.4 Summary and Further Remarks 107

4 Numerical Simulation Methods for Uncertain Dynamics 109
4.1 Mathematical Background 110
4.2 Semi-quantitative Simulation: NSIM and NIS 120
4.2.1 The NSIM Approach 120
4.2.2 The NIS Approach 121
4.3 Quasi-Monotone Systems 123
4.4 Problems of Interval-based Methods 125
4.4.1 The Approximation Problem 125
4.4.2 The Interactivity Problem 128
4.5 Numerical Approximation Methods 132
4.5.1 Precise Approximations 133
4.5.2 Outer Approximations 135
4.5.3 Implementational Aspects 137
4.5.4 Star-shaped Approximations 140

4.5.5 Examples 143
4.6 Linear Systems 146
4.7 Semantic Aspects and Related Methods 149
4.8 Summary 154

5 Spatial and Spatiotemporal Reasoning **157**
5.1 Spatial Reasoning 157
5.2 Approaches to Qualitative Spatial Reasoning 158
5.2.1 Reasoning with a Small Number of Concepts 158
5.2.2 The Problem of Spatial Indeterminancy 160
5.3 Semi-quantitative Spatial Reasoning 161
5.3.1 Principles of the Method 161
5.3.2 Mathematical Formulation 163
5.3.3 Constraint Propagation 164
5.3.4 Fuzzy Spatial Reasoning 166
5.4 Spatiotemporal Reasoning 167
5.5 An Approach to Spatiotemporal Reasoning 168
5.5.1 Related Methods 168
5.5.2 The Mathematical Model 169
5.5.3 Cognitive Modelling 170
5.6 Summary 172

Conclusion **173**

A Local Convex Hulls **177**
