
Contents

Section I Measurements

- 1 **Comparison of Biological Scale Resolution from CTD and Microstructure Measurements**.....3
Fabian Wolk, Laurent Seuront, Hidekatsu Yamazaki, and Sophie Leterme
- 2 **Measurement of Zooplankton Distributions with a High-Resolution Digital Camera System**.....17
Mark C. Benfield, Christopher J. Schwehm, Rodney G. Fredericks, Gregory Squyres, Sean E. Keenan, and Mark V. Trevorrow
- 3 **Planktonic Layers: Physical and Biological Interactions on the Small Scale**.....31
Timothy J. Cowles
- 4 **Scales of Biological-Physical Coupling in the Equatorial Pacific**.....51
Peter G. Strutton and Francisco P. Chavez
- 5 **Acoustic Remote Sensing of Photosynthetic Activity in Seagrass Beds**.....65
Jean-Pierre Hermand
- 6 **Multiscale *in Situ* Measurements of Intertidal Benthic Production and Respiration**97
Dominique Davoult, Aline Migné, and Nicolas Spilmont
- 7 **Spatially Extensive, High Resolution Images of Rocky Shore Communities**..... 109
David R. Blakeway, Carlos D. Robles, David A. Fuentes, and Hong-Lie Qiu
- 8 **Food Web Dynamics in Stable Isotope Ecology: Time Integration of Different Trophic Levels** 125
Catherine M. O'Reilly, Pieter Verburg, Robert E. Hecky, Pierre-Denis Plisnier, and Andrew S. Cohen
- 9 **Synchrotron-Based Infrared Imaging of *Euglena gracilis* Single Cells**..... 135
Carol J. Hirschmugl, Maria Bunta, and Mario Giordano
- 10 **Signaling during Mating in the Pelagic Copepod, *Temora longicornis*** 149
Jeannette Yen, Anne C. Prusak, Michael Caun, Michael Doall, Jason Brown, and J. Rudi Strickler

11	Experimental Validation of an Individual-Based Model for Zooplankton Swarming	161
	<i>Neil S. Banas, Dong-Ping Wang, and Jeannette Yen</i>	

Section II Analysis

12	On Skipjack Tuna Dynamics: Similarity at Several Scales	183
	<i>Aldo P. Solari, Jose Juan Castro, and Carlos Bas</i>	
13	The Temporal Scaling of Environmental Variability in Rivers and Lakes	201
	<i>Hélène Cyr, Peter J. Dillon, and Julie E. Parker</i>	
14	Biogeochemical Variability at the Sea Surface: How It Is Linked to Process Response Times	215
	<i>Amala Mahadevan and Janet W. Campbell</i>	
15	Challenges in the Analysis and Simulation of Benthic Community Patterns	229
	<i>Mark P. Johnson</i>	
16	Fractal Dimension Estimation in Studies of Epiphytal and Epilithic Communities: Strengths and Weaknesses	245
	<i>John Davenport</i>	
17	Rank-Size Analysis and Vertical Phytoplankton Distribution Patterns ...	257
	<i>James G. Mitchell</i>	
18	An Introduction to Wavelets	279
	<i>Igor M. Dremin, Oleg V. Ivanov, and Vladimir A. Nechitailo</i>	
19	Fractal Characterization of Local Hydrographic and Biological Scales of Patchiness on Georges Bank	297
	<i>Karen E. Fisher, Peter H. Wiebe, and Bruce D. Malamud</i>	
20	Orientation of Sea Fans Perpendicular to the Flow	321
	<i>Thomas Osborn and Gary K. Ostrander</i>	
21	Why Are Large, Delicate, Gelatinous Organisms So Successful in the Ocean's Interior?	329
	<i>Thomas Osborn and Richard T. Barber</i>	
22	Quantifying Zooplankton Swimming Behavior: The Question of Scale	333
	<i>Laurent Seuront, Matthew C. Brewer, and J. Rudi Strickler</i>	

23	Identification of Interactions in Copepod Populations Using a Qualitative Study of Stage-Structured Population Models	361
	<i>Sami Souissi and Olivier Bernard</i>	

Section III Simulation

24	The Importance of Spatial Scale in the Modeling of Aquatic Ecosystems	383
	<i>Donald L. DeAngelis, Wolf M. Mooij, and Alberto Basset</i>	
25	Patterns in Models of Plankton Dynamics in a Heterogeneous Environment	401
	<i>Horst Malchow, Alexander B. Medvinsky, and Sergei V. Petrovskii</i>	
26	Seeing the Forest for the Trees, and Vice Versa: Pattern-Oriented Ecological Modeling	411
	<i>Volker Grimm and Uta Berger</i>	
27	Spatial Dynamics of a Benthic Community: Applying Multiple Models to a Single System	429
	<i>Douglas D. Donalson, Robert A. Desharnais, Carlos D. Robles, and Roger M. Nisbet</i>	
28	The Effects of Langmuir Circulation on Buoyant Particles	445
	<i>Eric D. Skyllingstad</i>	
29	Modeling of Turbulent Intermittency: Multifractal Stochastic Processes and Their Simulation	453
	<i>François G. Schmitt</i>	
30	An Application of the Lognormal Theory to Moderate Reynolds Number Turbulent Structures	469
	<i>Hidekatsu Yamazaki and Kyle D. Squires</i>	
31	Numerical Simulation of the Flow Field at the Scale Size of an Individual Copepod	479
	<i>Houshuo Jiang</i>	
32	Can Turbulence Reduce the Energy Costs of Hovering for Planktonic Organisms?	493
	<i>Hidekatsu Yamazaki, Kyle D. Squires, and J. Rudi Strickler</i>	
33	Utilizing Different Levels of Adaptation in Individual-Based Modeling	507
	<i>Geir Huse and Jarl Giske</i>	

34 Using MultiAgent Systems to Develop Individual-Based Models for Copepods: Consequences of Individual Behavior and Spatial Heterogeneity on the Emerging Properties at the Population Scale.....523
Sami Souissi, Vincent Ginot, Laurent Seuront, and Shin-Ichi Uye

35 Modeling Planktonic Behavior as a Complex Adaptive System.....543
Atsuko K. Yamazaki and Daniel Kamykowski

36 Discrete Events-Based Lagrangian Approach as a Tool for Modeling Predator–Prey Interactions in the Plankton559
Philippe Caparroy
