Foreword	
Editor's Preface	xi
I. <i>Visual Processes</i>	1
Introduction	
1. The hypnotic induction of hallucinatory color vision followed by pseudonegative afterimages (written with E. M. Erickson)	5
2. Discussion: Critical comments on Hibler's presentation of his work on negative afterimages of hypnotically induced hallucinated colors (written by E.M. Erickson)	11
3. The induction of color blindness by a technique of hypnotic suggestion	18
4. An experimental investigation of the hypnotic subject's apparent ability to become unaware of stimuli	33
5. The development of an acute limited obsessional hysterical state in a normal hypnotic subject	51
6. Observations concerning alterations in hypnosis of visual perceptions (written by E.M. Erickson)	66
7. Further observations on hypnotic alteration of visual perception (written by E.M. Erickson)	71
8. An investigation of optokinetic nystagmus	73
9. Acquired control of pupillary responses	76
II. <i>Auditory Processes</i>	79
Introduction	
10. A study of clinical and experimental findings on hypnotic deafness: I. Clinical experimentation and findings	81
11. A study of clinical and experimental findings on hypnotic deafness: II. Experimental findings with a conditioned response technique	100
12. Chemo-anaesthesia in relation to hearing and memory	114
13. A field investigation by hypnosis of sound loci importance in human behavior	121
III. <i>Psychophysiological Processes</i>	143
Introduction	
14. Hypnotic investigation of psychosomatic phenomena: Psychosomatic interrelationships studied by experimental hypnosis	145

15. Hypnotic investigation of psychosomatic phenomena: The development of aphasiatic reactions from hypnotically induced amnesias (written with R. M. Brickner)	157
16. Hypnotic investigation of psychosomatic phenomena: A controlled experimental use of hypnotic regression in the therapy of an acquired food intolerance	169
17. Experimentally elicited salivary and related responses to hypnotic visual hallucinations confirmed by personality reactions	175
18. Control of physiological functions by hypnosis	179
19. The hypnotic alteration of blood flow: An experiment comparing waking and hypnotic responsiveness	192
20. A clinical experimental approach to psychogenic infertility	196
21. Breast development possibly influenced by hypnosis: Two instances and the psychotherapeutic results	203
22. Psychogenic alteration of menstrual functioning: Three instances	207
23. The appearance in three generations of an atypical pattern of the sneezing reflex	213
24. An addendum to a report of the appearance in three generations of an atypical pattern of the sneezing reflex	217
IV. <i>Time Distortion</i>	
Introduction	
25. Time distortion in hypnosis, I (written by L. F. Cooper)	221
26. Time distortion in hypnosis, II (written with L. F. Cooper)	231
27. The clinical and therapeutic applications of time distortion	266
28. Further considerations of time distortion: Subjective time condensation as distinct from time expansion (written with E. M. Erickson)	291
V. <i>Research Problems</i>	299
Introduction	
29. Clinical and experimental trance: Hypnotic training and time required for their development	301
30. Laboratory and clinical hypnosis: The same or different phenomena?	307
31. Explorations in hypnosis research (with a discussion by T. X. Barber, R. Dorcus, H. Guze, T. Sarbin, and A. Weitzenhoffer)	313
32. Expectancy and minimal sensory cues in hypnosis	337
33. Basic psychological problems in hypnotic research	340
34. The experience of interviewing in the presence of observers	351
References	335
