Notation	XIII
1 Introduction	1
2 Elements of Software Reliability	5
2.1 Fundamentals	6
2.1.1 Probability and Random Processes	6
2.1.2 Basic Terms	11
2.2 Reliability Parameters	12
2.2.1 Failure Describing Parameters	13
2.2.2 Characterizing Failure Occurrences and Fault Counting	14
2.2.3 Data Collection	15
3 Classification of Software Reliability Models	17
3.1 Reliability Models Described by NHPP	18
3.1.1 Generalized Poisson Model	19
3.1.2 Exponential Growth Models	19
3.1.3 Logarithmic NHPP Model	22
3.1.4 S-Shaped Growth Models	22
3.2 Binomial Type Models	23
3.2.1 Jelinski and Moranda Models	24
3.2.2 Schick and Wolverton Models	25
3.2.3 Littlewood Model	25
3.2.4 Shooman Models	26
3.3 Other Important Models	28
3.3.1 Hyper-Geometric Distribution Model	28
3.3.2 Software Redundancy Strategy	29
3.3.3 Duane Model	30
3.3.4 Model for Markov Structured Software	31
4 Framework for Software Reliability Determination	33
4.1 Complexity Measures	34
4.1.1 Program Structure	35

4.1.2	Program Operation	37
4.2	Determining Reliability	39
4.2.1	Reliability and Complexity	41
4.2.2	Parameter Determination	42
5	Reliability Prediction	45
5.1	Predicting Reliability through Complexity	46
5.1.1	Structural Complexity Measure	46
5.1.2	Operational Complexity Measure	48
5.1.3	A Prediction Approach	49
5.2	Application of Prediction Models	51
5.2.1	General Remarks	51
5.2.2	The New Approach and Conventional Models	52
6	Reliability Estimation	53
6.1	Estimating Reliability through Complexity	53
6.1.1	Structural and Operational Complexity Measures	53
6.1.2	An Estimation Approach	57
6.1.3	Combining Estimation and Prediction	61
6.2	Application of Estimation Models	63
6.2.1	General Remarks	63
6.2.2	The New Approach and Conventional Models	65
7	Empirical Analysis	67
7.1	Prediction	67
7.1.1	Nonvariable Parameters	67
7.1.2	Reliability Parameters	68
7.2	Estimation	69
7.2.1	Nonvariable Parameters	69
7.2.2	Reliability Parameters	72
8	Implementing Reliability Models	77
8.1	Conventional Programming	78
8.1.1	Reliability Models	78
8.1.2	Parameter Determination	82
8.2	The New Approach	84
8.2.1	Parameters of Structural Complexity	84
8.2.2	Backtracking Degree	85
8.2.3	Number of Recursive Calls	89
8.2.4	Number of Segment Accesses	92
8.2.5	Determining Structural and Operational Complexity	93
8.2.6	Environment for Reliability Assessment	104

9	Outlook on Other Programming Paradigms	107
9.1	Object-Oriented Programming	107
9.1.1	Elements of Object-Oriented Programming	108
9.1.2	Object-Oriented and Conventional Programming	110
9.2	Multiparadigms	113
9.2.1	The Hybrid Programming Language PROLoop	113
9.2.2	Reliable Design and Implementation in Multiparadigms	118
10	Summary	131
	Bibliography	133
A	The Reliability Assessment Environment PRORool	145
A.1	Validating Prolog Programs	145
A.1.1	Test and Reliability Aspects	147
A.1.2	Tool Aspect	148
A.2	Product Assurance Environment	148
A.2.1	Graphical User Interface	149
A.2.2	A Sample Session of the Test Environment	150
A.3	Components of the Reliability Assessment Environment PRO- Rool	151
A.3.1	File and Model Selection	153
A.3.2	Parameter Computation and Results Visualization	154
A.3.3	Other Components	156
B	Logic Programming and Prolog	159
B.1	Basic Concepts	160
B.1.1	Constructs	160
B.1.2	Prolog Program Execution and Tracing Model	163
B.2	Implementation Aspects of Prolog	166
B.2.1	Meta-Logical	166
B.2.2	Cut and Negation	167
B.2.3	Extra-Logical	168
	Index	171
