List of Symbols xxi

1 Semiconductor Physics Review for MOSFET Modeling 1
1.1 Introduction 1
1.2 Crystal Planes 4
1.3 Band Theory of Semiconductors 5
1.3.1 Energy–Momentum Relation and Energy Band Diagram 9
1.4 Carrier Statistics 14
1.4.1 Density of Energy States 14
1.4.2 Probability of Occupation of Energy States 15
1.4.3 Carrier Concentration for Non-degenerate Silicon 15
1.4.4 Degenerate Silicon and Band Gap Narrowing 17
1.4.5 Fermi Level Position 18
1.4.6 Quasi-Fermi Level 20
1.5 Carrier Generation and Recombination 21
1.5.1 Shockley–Read–Hall (SRH) Model 21
1.6 Carrier Scattering 23
1.6.1 Lattice Vibration Scattering 24
1.6.2 Ionized Impurity Scattering 25
1.6.3 Carrier–Carrier Scattering 25
1.6.4 Multiple-Scattering: Mathiessen's Rule 25
1.6.5 Drift Velocity–Electric Field Characteristics 27
1.7 Contacts and Interfaces 29
1.8 Strained Silicon 31
1.8.1 Mobility Enhancement 32
1.9 Basic Semiconductor Equations 33
1.9.1 Poisson's Equation 33
1.9.2 Current Density Equation 34
1.9.3 Current Continuity Equation 35

1.10 Compact MOSFET Models 36
1.11 The p–n Junction Diode 38
1.11.1 Transition Region 38
1.11.2 Recombination/Generation Current 40
1.11.3 Carrier Multiplication 42
1.11.4 SPICE Model Parameters for a p–n Junction Diode 43
1.12 Tunneling Through Potential Barrier 44
References 48

2 Ideal Metal Oxide Semiconductor Capacitor 55
2.1 Physical Structure and Energy Band Diagram 55
2.2 Modes of Operation of MOS Capacitors 56
2.2.1 Volume Space Charge Density 57
2.2.2 Surface Space Charge Density 60
2.2.3 Surface Inversion Charge Density 63
2.2.4 Moderate Inversion 66
2.3 Electric Field and Potential Distributions 67
2.3.1 Distribution in Oxide 67
2.3.2 Distribution in Space Charge Region 68
2.4 Potential Balance 71
2.4.1 An Explicit Relation of ϕ_s with V_{GB} 73
2.4.2 Slope Factor (n) 76
2.5 Inversion Layer Thickness 77
2.6 Threshold Voltage 79
2.6.1 Inversion Charge Density Above and Below the Threshold 81
2.6.2 Graphical Representation of Threshold Voltage 84
2.7 Small Signal Capacitance 86
2.7.1 Regional Approximations 88
2.8 Three Terminal Ideal MOS Structures 92
2.8.1 Cross-Section and Band Diagram 93
2.8.2 Space Charge Density, Surface Potential and Threshold Voltage 94
2.8.3 Pinch-off Voltage 101
2.8.4 Inversion Charge Density in Terms of V_P and V_{SB} 104
2.8.5 Small Signal Capacitor Model 108
References 109

3 Non-ideal and Non-classical MOS Capacitors 113
3.1 Introduction 113
3.2 Flat-Band Voltage 114
3.2.1 Gate Substrate Work Function Difference $\phi_g \neq \phi_{Si}$ 114
3.2.2 Oxide Charges 117

3.3 Inhomogeneous Substrate 120
3.3.1 Types of Implant 121
3.3.2 Pinch-off Voltage for an Inhomogeneous Substrate 127
3.3.3 Vertical Substrate Inhomogeneity in Compact Models 129
3.4 Polysilicon Depletion Effect 132
3.4.1 Effect on Threshold Voltage 133
3.4.2 Inversion Charge with Polydepletion Effect 136
3.4.3 Effect on C–V Characteristics 137
3.4.4 Polydepletion Effect in Compact Models 139
3.5 Non-classical MOS Structures 141
3.5.1 Threshold Voltages for Si–SiGe–Si MOS Heterostructures 142
3.5.2 Si–SiGe–Si MOS Heterostructure 143
3.5.3 Undoped Silicon 146
3.6 MOS Capacitor With Stacked Gate 150
3.6.1 Thin Gate Oxide and Tunneling 151
3.6.2 High-k Dielectric and Stacked Gate 151
References 153

4 Long Channel MOS Transistor 159
4.1 Introduction 159
4.2 Layout and Cross-Section of Physical Structure 162
4.3 Static Drain Current Model 163
4.3.1 Gradual Channel Approximation 165
4.3.2 Continuity Equation 166
4.3.3 Transport Equation 167
4.3.4 Pao–Sah Exact Model 168
4.3.5 MOSFET Modeling Approaches for Circuit Simulation 169
4.3.6 Charge Sheet Approximation 172
4.4 Threshold Voltage (V_T) Based Model 177
4.4.1 Strong Inversion 177
4.4.2 Smoothing Function for Piecewise Current Models in Strong Inversion 183
4.4.3 Subthreshold or Weak Inversion Region 184
4.4.4 Subthreshold Slope 185
4.5 Memelink–Wallinga Graphical Model 186
4.5.1 Drain Current Saturation 187
4.5.2 Geometrical Interpretation 188
4.6 Channel Length Modulation 190
4.6.1 Early Voltage 192
4.7 Channel Potential and Field Distribution Along Channel 193
4.8 Carrier Transit Time 196
4.9 EKV Drain Current Model 197
4.9.1 Drain Current Interpolation 198
4.9.2 Drain to Source Saturation Voltage 200
4.10 ACM and BSIM5 Models 202

4.11 PSP Model 204
4.11.1 Symmetric Bulk and Inversion Charge Linearization 204
4.12 HiSIM (Hiroshima University STARC IGFET Model) Model 206
4.13 Benchmark Tests for Compact DC Models 208
References 209

5 The Scaled MOS Transistor 215
5.1 Introduction 215
5.2 Classical Scaling Laws 216
5.2.1 Constant Field (CF) Scaling 217
5.2.2 Constant Voltage (CV) Scaling 217
5.2.3 Quasi-Constant Voltage (QCV) Scaling 217
5.2.4 Generalized Scaling (GS) 217
5.2.5 Flexible Empirical Scaling 217
5.3 Lateral Field Gradient 221
5.3.1 Effect on Threshold Voltage 222
5.3.2 Barrier Lowering Model 223
5.3.3 Charge Sharing Model 228
5.3.4 V_T Implementation in Compact Models 234
5.4 Narrow and Inverse Width Effects 237
5.4.1 Scaling Effect on Pinch-off Voltage 241
5.5 Reverse Short Channel Effect 243
5.5.1 Arora's Model 243
5.5.2 BSIM3v3 Model 245
5.5.3 EKVv2.6 Model 246
5.5.4 HiSIM Model 246
5.6 Carrier Mobility Reduction 248
5.6.1 Mobility Dependence on Gate Field 249
5.6.2 Lateral Field Dependent Mobility 253
5.6.3 Drain Current Modeling with Velocity Saturation 254
5.7 Velocity Overshoot 260
5.8 Channel Length Modulation: A Pseudo-2-D Analysis 262
5.8.1 BSIM Model 265
5.8.2 HiSIM Model 266
5.9 Series Resistance Effect on Drain Current 267
5.9.1 PSP Model with Series Resistance Effect 270
5.10 Polydepletion Effect on Drain Current 271
5.11 Impact Ionization in High Field Region 273
5.11.1 Substrate Current Model 274
5.12 Channel Punch-Through 277
5.13 Empirical Alpha Power MOSFET Model 277
5.13.1 Physical Interpretation of the Alpha Power Model 279
References 281

6 Quasistatic, Non-quasistatic, and Noise Models **289**
6.1 Introduction 289
6.2 Quasistatic Approximation 291
6.3 Terminal Charge Evaluation 293
6.3.1 PSP Model 293
6.3.2 EKV Model 295
6.3.3 BSIM Model 298
6.3.4 Terminal Charge in Accumulation Region 301
6.4 Quasistatic Intrinsic Small Signal Model 301
6.4.1 Small Signal Conductances 301
6.4.2 Transconductances (g_{mg} and g_{ms}) 303
6.4.3 Drain Conductance g_{md} 304
6.4.4 Small Signal Capacitances 305
6.4.5 Equivalent Circuit Model 307
6.4.6 Medium Frequency Capacitance Model 310
6.4.7 EKV Capacitance Model 311
6.4.8 Meyer's Simplified Capacitance Model 312
6.5 Extrinsic Capacitances 312
6.5.1 Junction Capacitance 313
6.5.2 Overlap Capacitances 315
6.6 Non-quasistatic (NQS) Models 317
6.6.1 Non-quasistatic Large Signal Models 317
6.6.2 Non-quasistatic Small Signal Models 321
6.7 Noise Models 324
6.7.1 Analytical Channel Thermal Noise Model for MOSFETs with Velocity Saturation 330
6.7.2 Compact Thermal and Flicker Noise Models 332
6.7.3 Induced Gate Noise 335
References 335

7 Quantum Phenomena in MOS Transistors **339**
7.1 Introduction 339
7.2 Carrier Energy Quantization in MOS Capacitor 340
7.3 2-D Density of States 343
7.4 Electron Concentration Distribution 346
7.4.1 Self-consistent Results 347
7.5 Approximate Methods 351
7.5.1 Triangular Well Approximation Method 351
7.5.2 Variational Method 351
7.6 Quantization Correction in Compact MOSFET Models 352
7.6.1 Threshold Voltage Model 352
7.6.2 Effective Oxide Thickness 354
7.6.3 HiSIM Model 355
7.6.4 Philips MM11 and PSP Model 355
7.6.5 EKV Model 356
7.7 Quantum Tunneling 358

7.8 Gate Current Density 359
7.8.1 The Tsu–Esaki Model 360
7.8.2 Tunneling Probability 363
7.8.3 Gate Current and its Partition 364
7.9 Compact Gate Current Models 365
7.9.1 BSIM4 Model 367
7.9.2 PSP Model 371
7.9.3 HiSIM Model 373
7.10 Gate Induced Drain Leakage (GIDL) 373
7.10.1 Energy Band Bending at the Si–SiO_2 Interface 374
7.10.2 Analytical Expression for GIDL Current 377
References 379

8 Non-classical MOSFET Structures 383
8.1 Introduction 383
8.2 Non-classical MOSFET Structures 386
8.2.1 Single Gate UTB MOSFET on SOI 386
8.2.2 Double Gate MOSFETs 386
8.2.3 Nonplanar MOSFET Structures 388
8.2.4 Strained-Silicon Structure 389
8.3 Double Gate MOSFET Models 390
8.3.1 Electrostatic Potential 391
8.3.2 Drain Current Models 396
8.3.3 Short Channel Effect (SCE) 404
8.3.4 Quantum Confinement Effect 408
8.3.5 Compact DG MOSFET Models 410
References 412

Appendix A: Expression for Electric Field and Potential Variation in the Semiconductor Space Charge under the Gate 415

Appendix B: Features of Select Compact MOSFET Models 419

Appendix C: PSP Two-point Collocation Method 421

Index 427
