

1	Introduction	1
	Experimental variables	3
	Qualitative and quantitative experiments	6
2	Reaction time	8
	Historical sketch	10
	Apparatus	11
	Dependence on the stimulus	16
	Dependence on the organism	27
	Correlations and uses	39
3	Association	43
	Historical background	43
	Methods	46
	Commonness of response words	50
	Classification	52
	Associative reaction time	56
	Detective and diagnostic uses	66
4	Attention	72
	Determiners of attention	74
	Shifts and fluctuations	76
	Distraction	84
	Doing two things at once	87
	Span of attention or of appre- hension	90
5	Emotion I: Expressive move- ments	107
	Activation theory	108
	Facial expression	111
	Vocal expression	121
	Primary dimensions of facial expression	124

Heredity and learning of expression 128

6 Emotion II: Energetics 133

The activation mechanisms 133

Electrical skin conductance 137

Psychological determiners of skin conductance 144

Significance for psychology 158

7 Emotion III: Other bodily changes 160

Circulation 160

Respiration 168

Muscular tension 173

Other changes and indices 179

Patterns of activation 181

Lie detection 185

8 Psychophysics I: The determination of thresholds 192

The Method of Limits 196

The Method of Average Error 199

Frequency methods 200

The nature of thresholds 219

Thresholds and Weber's Law 221

Constant errors and series effects 225

9 Psychophysics II: Scaling methods 234

Scales based on liminal differences 235

Fractionation methods 238

	The Method of Equal Sense	
	Distances	246
	Paired Comparison	252
	The Ranking Method	257
	The use of reaction time for scaling	261

10	The cutaneous senses	267
	Sensory nerve conduction	268
	Delimitation of the cutaneous senses	273
	Adaptation of the skin senses	286
	Cutaneous perception	293
11	The chemical senses	297
	Taste	298
	Smell	304
	Olfactory thresholds	312
	Odor stimuli	318
12	Audition	323
	The cochlea and auditory nerve	325
	Auditory theories	327
	The dimensions of hearing	330
	Combinations of simple tones	338
	Aural inadequacies	342
	Deafness	346
	Auditory space perception	349
13	Vision	362
	The visual stimulus	362
	Rod and cone vision	365
	Light and dark adaptation	367
	Temporal and spatial factors	373
	Brightness	378
	Visual acuity	382
	Color vision	387
	Binocular vision	397
14	The perception of form	403
	Figure and ground	403
	Perceptual units	408
	Contour	411
	Masking of figures	413

	Proportion as a characteristic of shape	416
	The geometrical illusions . . .	417
	Figural aftereffects	423
15	Perception of color	428
	Problems in color perception . . .	428
	Normal conditions of illumina- tion	433
	Deceptive indications of illu- mination	441
	Field factors	444
	Adaptation	447
	Contrast	449
16	Visual depth perception	455
	Possible cues of depth	456
	The stereoscope and stereo- scopic vision	465
	Accuracy of depth perception . . .	469
	Accommodation and conver- gence	475
	The relationship between size and distance	480
	Perception of objects	487
17	Eye movements in relation to perception	492
	Methods of observing and re- cording eye movements	493
	Fixation and associated eye movements	497
	Eye movements in reading	504
	Pursuit movements and the perception of motion	510
	Compensatory eye movements . . .	517
	Orientation in space	523
18	Learning: Introductory survey	528
	General scheme of an experi- ment in learning	530
	Purpose and design of learning experiments	539

19	Conditioning	541
	Pavlov's conditional reflex	541
	The nature of reinforcement	545
	The problem of extinction	557
	Time relations	565
	Attitudinal and "volitional" factors	572
	Generalization and discrimina- tion	576
20	Discrimination learning	582
	Discrimination without direct comparison	585
	What are the effective cues in successful discrimination?	589
	"VTE—vicarious trial and error"	599
	The "delayed reaction"	604
	Cue learning by human sub- jects	608
21	Maze learning	614
	Sensory cues in maze learning	615
	The maze pattern as a factor in learning	618
	Some matters of technique	624
	What is learned in the maze?	626
	How the maze is learned	635
	Human maze learning	646
22	Motivation in learning and performance	655
	Factors in performance	655
	Drive and incentive	657
	Negative drives and incentives	668
	Secondary incentives	679
	Nonorganic primary drives and incentives	683
	Human drives and incentives	685
23	Memory	695
	Experimental methods for the study of memory	695

Materials used in memory ex- periments	701
Memorizing	703
The memorizing process . . .	707
Recall	718
Recognition	722
Retention	724
Factors affecting the speed of forgetting	728

24 Transfer and interference . . .	733
Design of transfer experiments	735
Cross education	738
Memory training	743
Training in observation . . .	746
Transfer in maze learning . .	748
Transfer in terms of stimulus and response	751
Retroaction	761
Theories of retention (or of forgetting)	767

25 Economy in learning and per- formance	779
Recitation as an aid in learning	779
Whole <i>versus</i> part learning	782
Massed <i>versus</i> spaced (or "dis- tributed") learning	786
Reminiscence	791
Work and fatigue	798
Efficient acquisition of a skill	809

26 Problem solving: thinking . . .	814
Process-tracing experiments . .	815
Problem solution as related to transfer	825
Set as a factor in problem solv- ing	830
Reasoning as the utilization of information	841

Bibliographical Index of Authors . . .	849
Subject Index	910
