Preface xxi

1. THE NATURE OF RESEARCH	1
1.1 Introduction	1
1.2 Observations and Variables	3
1.3 Behavioral Variables	4
1.4 Stimulus Variables	4
1.5 Organismic Variables	5
1.6 Discrete and Continuous Variables	6
1.7 Quantitative and Qualitative Variables	7
1.8 Research and Experiments	7
<i>Questions and Problems</i>	9
2. PRINCIPLES OF EXPERIMENTAL DESIGN	10
2.1 The Farmer from Whidbey Island	10
2.2 The Experiment	11
2.3 The Question of Interest	12
2.4 Sample Space and Probability	12
2.5 Simulation of the Experiment	13
2.6 Permutations	13
2.7 Combinations	14
2.8 Random Samples	15
2.9 Probabilities of Possible Outcomes	15
2.10 A Sample Space for the Experiment	17
2.11 Testing a Null Hypothesis	17
2.12 Type I and Type II Errors	18
2.13 Experimental Controls	19
2.14 The Importance of Randomization	21
2.15 A Variation in Design	22
<i>Questions and Problems</i>	23
3. THE STANDARD NORMAL DISTRIBUTION	26
3.1 Introduction	26
3.2 Binomial Populations and Binomial Variables	27
3.3 Mean of a Population	27
3.4 Variance and Standard Deviation of a Population	28
3.5 Expected Values	28
3.6 Expected Value of a Sum and Variance of a Sum	29
3.7 Expected Value of a Mean and Variance of a Mean	29
3.8 The Second Experiment with the Farmer: μ_T and σ_T	30
3.9 Representing Probabilities by Areas	31

3.10	The Standard Normal Distribution	32
3.11	The Second Experiment with the Farmer: A Normal Distribution Test	33
3.12	The First Experiment with the Farmer: A Normal Distribution Test	34
3.13	Applications of the Binomial Models	37
3.14	Populations in Which X Can Take a Number of Different Possible Values	38
3.15	The Distribution of T for Random Samples from a Rectangular or Uniform Population	39
3.16	The Distribution of T for Random Samples from a U-Shaped Population	41
3.17	The Distribution of T for Random Samples Drawn from a Skewed Population	43
3.18	Summary	46
	<i>Questions and Problems</i>	46
4.	TESTS FOR MEANS OF RANDOM SAMPLES	50
4.1	Transforming a Sample Mean into a Standard Normal Variable	50
4.2	The Variance and Standard Error of a Mean When σ Is Known	51
4.3	The Variance and Standard Error of a Mean When σ Is Unknown	51
4.4	The t Distribution	52
4.5	Confidence Interval for a Mean	53
4.6	Standard Error of the Difference Between Two Means	54
4.7	Confidence Interval for a Difference Between Two Means	57
4.8	Test of Significance for a Difference Between Two Means	58
4.9	The Null Hypothesis and Alternatives	58
4.10	The Power of the t Test Against a Specified Alternative	61
4.11	Estimating the Number of Observations Needed in Comparing Two Treatment Means	64
4.12	Random Assignment of Subjects	67
4.13	Use of a Table of Random Numbers	67
4.14	Optimum Allocation of the Total Number of Observations	68
4.15	The Loss of Subjects in Behavioral Science Experiments	68
4.16	The t Test with $\sigma_1^2 = \sigma_2^2$ and with $n_1 \neq n_2$	69
	<i>Questions and Problems</i>	70
5.	HETEROGENEITY OF VARIANCE	75
5.1	Introduction	75
5.2	The F Distribution	75
5.3	Test of Homogeneity of Two Variances	76
5.4	The t Test with $\sigma_1^2 \neq \sigma_2^2$ and with $n_1 \neq n_2$	77
5.5	The t Test with $\sigma_1^2 \neq \sigma_2^2$ but with $n_1 = n_2$	78

5.6	Nonrandom Assignment of Subjects	79
5.7	Nonadditivity of a Treatment Effect	80
5.8	Treatments That Operate Differentially on Organismic Variables	80
5.9	Two Samples from Different Poisson Distributions	81
5.10	The Case Where Treatment Standard Deviations and Means Are Proportional	82
5.11	Two Samples from Different Binomial Populations	83
5.12	Heterogeneity of Variance When Time Is a Dependent Variable	83
5.13	Transformation of Scale: General Considerations	84
5.14	Nonnormality: General Conclusions	84
	<i>Questions and Problems</i>	85
6.	THE ANALYSIS OF VARIANCE FOR A RANDOMIZED GROUP DESIGN	88
6.1	Introduction	88
6.2	Notation for a Randomized Group Design	89
6.3	Sums of Squares for a Randomized Group Design	90
6.4	Randomized Group Design: An Example	91
6.5	Test of Significance for a Randomized Group Design	93
6.6	Weighted Means Analysis with Unequal n 's	94
6.7	Method of Unweighted Means with Unequal n 's	96
6.8	Unweighted Means Versus Weighted Means	99
6.9	The Analysis of Variance with $k = 2$ Treatments: $n_1 = n_2$	100
6.10	The Analysis of Variance with $k = 2$ Treatments: $n_1 \neq n_2$	101
6.11	The Analysis of Variance with Binomial Variables	103
	<i>Questions and Problems</i>	104
7.	THE FIXED-EFFECT MODEL FOR A RANDOMIZED GROUP DESIGN	109
7.1	Introduction	109
7.2	The Analysis of Variance Model When the General Null Hypothesis Is True	109
7.3	The Analysis of Variance Model When the General Null Hypothesis Is False	111
7.4	Expected Value of the Treatment Sums of Square When $k = 2$ and $n_1 = n_2$	115
	<i>Questions and Problems</i>	115
8.	PAIRWISE COMPARISONS	117
8.1	Introduction	117
8.2	An Experiment with $k = 4$ Treatments and with $n = 10$ Subjects Randomly Assigned to Each Treatment	118
8.3	Expected Value of $n\sum(\bar{X}_i. - \bar{X}_j.)^2/k$ When the General Null Hypothesis Is True	119
8.4	Expected Value of $n\sum(X_{i.} - \bar{X}_j.)^2/k$ When the General Null Hypothesis Is False	120

8.5	Protection Levels	120
8.6	Fisher's Significant Difference (FSD) Test	121
8.7	Protection Levels with the FSD Test	122
8.8	Duncan's Multiple-Range (DMR) Test	125
8.9	Shortest Significant Ranges for the DMR Test	126
8.10	Test of Significance with the DMR Test	126
8.11	Protection Levels with the DMR Test	128
8.12	The Tukey Significant Difference (TSD) Test	128
8.13	The Bonferroni Significant Difference (BSD) Test	128
8.14	Peiser's Approximation for the Bonferroni t	129
8.15	Scheffé's Significant Difference (SSD) Test	130
8.16	The Five Methods: General Considerations	131
	<i>Questions and Problems</i>	133

9. ORTHOGONAL AND PLANNED COMPARISONS 135

9.1	Introduction	135
9.2	Comparisons on Treatment Means	135
9.3	Standard Error of a Comparison	137
9.4	The t Test of Significance of a Comparison	137
9.5	Orthogonal Comparisons	138
9.6	Orthogonal Comparisons on Treatment Sums	139
9.7	Test of Significance of a Comparison on the Treatment Sums	140
9.8	Proof that $F = t^2$	141
9.9	Multiplying the Coefficients of a Comparison by a Constant	141
9.10	Choosing a Set of Orthogonal Comparisons	142
9.11	Protection Levels with Orthogonal Comparisons	143
9.12	Treatments as Values of an Ordered Variable	143
9.13	Coefficients for Orthogonal Polynomials	144
9.14	Tests of Significance of Linearity and Deviations from Linearity	145
9.15	Test of Significance for the Quadratic and Cubic Comparisons	147
9.16	Comparing Each Treatment Mean with a Control	148
9.17	Significance of the Difference Between the Control Mean and Each Treatment Mean	149
9.18	A Drug Experiment with a Control Group	150
9.19	Tests of Significance for Planned Comparisons	151
	<i>Questions and Problems</i>	151

10. UNPLANNED COMPARISONS 153

10.1	Introduction	153
10.2	Some Examples of Comparisons	154
10.3	The Scheffé Test for Comparisons on Treatment Sums	155
10.4	The Scheffé Test for Comparisons on Treatment Means	156
10.5	Properties of the Scheffé Test	156
10.6	The Maximum Value of F for a Comparison	157
10.7	Comparisons with Unequal n 's: A Weighted Means Analysis	159

10.8	Orthogonal Comparisons with Unequal n 's	161
10.9	Test of Significance with Unequal n 's and a Weighted Means Analysis	161
10.10	Source of the Coefficients for Comparisons with Unequal n 's	162
10.11	A Simple Method for Obtaining Mean Squares for Comparisons with Unequal n 's	163
10.12	The Null Hypotheses Tested by $D_1, D_2, D_3,$ and D_4	163
10.13	Testing Unplanned Comparisons with the BSD Test	165
10.14	$MS_{D_{\max}}$ with Unequal n 's	165
	<i>Questions and Problems</i>	166

11. THE 2^k FACTORIAL EXPERIMENT 168

11.1	Introduction	168
11.2	An Example of a 2^3 Factorial Experiment	169
11.3	Sums of Squares: Total, Within, and Treatment	170
11.4	Assumption of Homogeneity of Variance	171
11.5	Significance of the Treatment Mean Square	172
11.6	Partitioning the Treatment Sum of Squares: Main Effects	172
11.7	Partitioning the Treatment Sum of Squares: Interaction Effects	173
11.8	Summary of the Analysis of Variance	176
11.9	The Main Effects	176
11.10	The Two-Factor Interaction Effects	177
11.11	Simple Main Effects	179
11.12	Graphs for the Two-Factor Interaction	180
11.13	The Three-Factor Interaction	181
11.14	Orthogonal Comparisons for the 2^3 Factorial Experiment	182
11.15	Notation and Sums of Squares for a Factorial Experiment	183
11.16	An Example Where $SS_{AB} = 0$	185
11.17	Two Examples Where $SS_{ABC} = 0$	185
11.18	An Example in Which the Sums of Squares for All Main Effects and Two-Factor Interactions Are Equal to Zero but in Which $SS_{ABC} \neq 0$	187
11.19	Ordinal and Nonordinal Two-Factor Interactions	187
11.20	Other 2^k Factorial Experiments	189
11.21	Advantages of Factorial Experiments	189
	<i>Questions and Problems</i>	190

12. FACTORIAL EXPERIMENTS: FACTORS WITH MORE THAN TWO LEVELS 195

12.1	Introduction	195
12.2	An Example of a $4 \times 3 \times 2$ Factorial Experiment	196
12.3	Calculation of the Sums of Squares for the $4 \times 3 \times 2$ Factorial Experiment	196
12.4	Summary of the Analysis of Variance for the $4 \times 3 \times 2$ Factorial Experiment	199
12.5	Calculation of a Three-Factor Interaction Sum of Squares	200

12.6	General Methods for Calculating Interaction Sums of Squares for Three or More Factors	202
12.7	Orthogonal Partitioning of Sums of Squares for Main Effects and Interactions	203
12.8	The Scheffé Test for Comparisons	207
12.9	A Quantitative Factor: Trend Components of a Main Effect	209
12.10	A Quantitative Factor: Trend Components of Interactions	211
12.11	Summary of the Analysis of the Trend Components	214
12.12	Pairwise Comparisons	217
	<i>Questions and Problems</i>	217

13. MODELS FOR FACTORIAL EXPERIMENTS WITH A RANDOMIZED

GROUP DESIGN 221

13.1	Introduction	221
13.2	Assumptions of the Fixed-Effect Model: Model I	222
13.3	Expected Value of the Correction Term: Model I	222
13.4	Expected Value of the Total Sum of Squares: Model I	223
13.5	Expected Value of the Treatment Sum of Squares: Model I	223
13.6	Expected Value of the Within-Treatment Mean Square: Model I	223
13.7	Expected Values of the A and B Mean Squares: Model I	224
13.8	Expected Value of the $A \times B$ Mean Square: Model I	224
13.9	Tests of Significance with the Fixed-Effect Model	225
13.10	Assumptions of the Random-Effect Model: Model II	225
13.11	Expected Value of the Correction Term: Model II	226
13.12	Expected Value of the Total Sum of Squares: Model II	226
13.13	Expected Value of the Treatment Sum of Squares: Model II	226
13.14	Expected Value of the Within-Treatment Mean Square: Model II	227
13.15	Expected Values of the A and B Mean Squares: Model II	227
13.16	Expected Value of the $A \times B$ Mean Square: Model II	227
13.17	Tests of Significance: Model II	228
13.18	Rules for Obtaining Expected Values of Mean Squares: Model II	228
13.19	Tests of Significance	230
13.20	Quasi F Ratios	231
13.21	Rules for Obtaining Expected Values of Mean Squares: A Mixed Model	232
13.22	Expected Values of Mean Squares: The Fixed-Effect Model	234
	<i>Questions and Problems</i>	234

14. FACTORIAL EXPERIMENTS: FURTHER CONSIDERATIONS 236

14.1	Obtaining the Same Number of Observations for Each Treatment	236
14.2	Discarding Observations at Random to Obtain Equal n 's	237
14.3	Unweighted Means Analysis for a Factorial Experiment	237

14.4	Exact Tests on Linear Functions of the Cell Means	240
14.5	Single Replication of a Factorial Experiment	241
14.6	Fractional Replication of the 2^k Factorial Experiment	243
14.7	Factorial Experiments and Control Groups	245
14.8	Factorial Experiments and Binomial Variables	247
	<i>Questions and Problems</i>	247

15. RANDOMIZED BLOCK DESIGNS 249

15.1	Introduction	249
15.2	A Randomized Block Design with $t = 5$ Treatments and $b = 5$ Blocks	251
15.3	Calculation of the Sums of Squares in a Randomized Block Design	252
15.4	Error Sum of Squares in a Randomized Block Design	253
15.5	Test of Significance with a Randomized Block Design	253
15.6	Notation and Sums of Squares	254
15.7	Missing Values in the Randomized Block Design	255
15.8	Expectation of Mean Squares in a Randomized Block Design	256
15.9	Factorial Experiments with a Randomized Block Design	259
15.10	Partitioning the $B \times T$ Sum of Squares	261
15.11	Expectation of the Mean Squares and Pooling Tests	262
15.12	Error Mean Squares for Comparisons on the Treatment Sums	264
15.13	Randomized Block Designs with Two Treatments	264
15.14	The t Test for a Randomized Block Design with Two Treatments	266
15.15	Grouping Subjects into Blocks	266
15.16	Using Blocks to Eliminate a Source of Variation	267
	<i>Questions and Problems</i>	267

16. BLOCK \times TREATMENT INTERACTIONS IN RANDOMIZED BLOCK DESIGNS 271

16.1	Introduction	271
16.2	Interaction of an Organismic Variable and Treatments	271
16.3	Tests of Significance with a Fixed-Effect and a Mixed Model	272
16.4	Organismic Variables in Randomized Group and Randomized Block Designs	274
16.5	Correlations Between Organismic Variables	276
16.6	Sensitivity of the F Test of MS_T for the Mixed Model: Blocks Random and Treatments Fixed	277
16.7	The Fixed-Effect Model	278
16.8	Blocks as Random Replications of an Experiment	278
16.9	Tests of Significance with Blocks as Random Replications of an Experiment	280
16.10	Another Variation of a Randomized Block Design	284
	<i>Questions and Problems</i>	286

17. LATIN SQUARE DESIGNS 288

- 17.1 Introduction 288
- 17.2 Randomization Procedures 289
- 17.3 Analysis of Variance for a Latin Square Design 291
- 17.4 General Equation for a Latin Square Design 293
- 17.5 Expected Values of Mean Squares in a Latin Square Design 293
- 17.6 Expected Values of Mean Squares When Interactions Are Present 296
- 17.7 The 2×2 Latin Square as a One-Half Fractional Replication of a 2^3 Factorial Experiment 297
- 17.8 The 3×3 Latin Square as a One-Third Fractional Replication of a 3^3 Factorial Experiment 299
- 17.9 Greco-Latin Squares 302
- Questions and Problems* 302

18. SINGLE-FACTOR AND FACTORIAL EXPERIMENTS WITH REPEATED MEASURES 305

- 18.1 Introduction 305
- 18.2 Sums of Squares in a Repeated-Measure Design 306
- 18.3 A Model for Correlated Errors 307
- 18.4 Expected Value of the Correction Term 308
- 18.5 Expected Value of the Treatment Mean Square 308
- 18.6 Expected Value of the Subject Mean Square 309
- 18.7 Expected Value of the Subject \times Treatment Mean Square 309
- 18.8 Test of Significance 310
- 18.9 Violations of Assumptions and a Conservative F Test 311
- 18.10 Two Repeated Measures for Each Subject 314
- 18.11 An Example of a Repeated-Measure Design with a Single Treatment Factor 316
- 18.12 Efficiency of the Repeated-Measure Design 317
- 18.13 A 3×3 Factorial Experiment with Repeated Measures 322
- 18.14 An Example of a 2^2 Factorial Experiment with Repeated Measures 323
- 18.15 Repeated Measures with Binomial Variables 326
- 18.16 Testing Pairwise Comparisons in a Repeated-Measure Design with a Single Treatment Factor 327
- 18.17 Tests for Validity of the Assumptions of the Repeated-Measure Design 327
- 18.18 Repeated-Measure Designs with Additive Treatment Effects 329
- Questions and Problems* 330

19. SPLIT-PLOT DESIGNS WITH REPEATED MEASURES 333

- 19.1 Introduction 333
- 19.2 Split-Plot Designs 333
- 19.3 Expected Values of Mean Squares in a Split-Plot Design 334
- 19.4 Assumptions of the Analysis of Variance 336

19.5	Tests for Violations of Assumptions	338
19.6	Conservative F Tests for the Split-Plot Design	338
19.7	Calculation of the Sums of Squares in a Split-Plot Design	339
19.8	Organismic Variables in a Split-Plot Design	344
19.9	A Split-Plot Design with One Major and Two Minor Fixed Factors	345
19.10	A Split-Plot Design with Two Major and One Minor Fixed Factors	347
	<i>Questions and Problems</i>	349

20. NESTED-FACTOR DESIGNS 352

20.1	Introduction	352
20.2	Expectation of Mean Squares	353
20.3	An Example of a Design in Which Levels of a Random Factor Are Nested Within Levels of a Fixed Factor	354
20.4	Expectation of the Mean Squares When W Is Fixed and S Is Random and When W Is Random and S Is Fixed	358
20.5	Designs in Which the Levels of W Are Nested Within the Levels of a Fixed Factor and Also Within Subjects	359
20.6	Replication of an Experiment with Different Fixed Levels of W	362
	<i>Questions and Problems</i>	362

21. LATIN SQUARE DESIGNS WITH REPEATED MEASURES 364

21.1	Introduction	364
21.2	Replications of Latin Square Designs with Independently Randomized Squares	364
21.3	Analysis of Variance for a Single Square	365
21.4	Analysis of Variance for Replications with Independent Squares	367
21.5	Expectation of Mean Squares: Replications with Independent Squares	370
21.6	Replication of an Experiment with the Same Square	372
21.7	Calculation of the Sums of Squares	373
21.8	Summary of the Analysis of Variance	376
21.9	Test of Significance of the Linear Component of Screen Size	376
21.10	Test of Significance of the Quadratic Component of Screen Size	377
21.11	Expectation of Mean Squares When the Same Square Is Replicated	378
21.12	Conservative F Tests	381
21.13	Replication of the 2×2 Latin Square	381
21.14	Carry-over or Residual Effects	385
21.15	Balanced Latin Squares	386
21.16	Balanced Designs and Estimates of Carry-over Effects	387
	<i>Questions and Problems</i>	387

22. TREND ANALYSIS WITH REPEATED-MEASURE DESIGNS	392
22.1 Introduction	392
22.2 Trial Means: One Standard Condition	394
22.3 Expectation of Mean Squares and Test of Significance	395
22.4 Linear and Quadratic Components of the Trial Sum of Squares	396
22.5 Trial Means with Different Treatments	397
22.6 Partitioning the Subject Sum of Squares	398
22.7 Partitioning the $S \times T$ Sum of Squares	400
22.8 Expectation of Mean Squares and Tests of Significance	401
22.9 Linear and Quadratic Components of the Trial Sum of Squares	403
22.10 Linear and Quadratic Components of the $A \times T$ Sum of Squares	404
22.11 Linear and Quadratic Components of the $S(A) \times T$ Sum of Squares	406
22.12 Expectation of Mean Squares for Linear and Quadratic Components	407
<i>Questions and Problems</i>	409
23. TREND ANALYSIS WITH TWO OR MORE FACTORS AND REPEATED MEASURES	413
23.1 Introduction	413
23.2 Trial Means: A Treatment Factor and an Organismic Variable	413
23.3 Partitioning the Subject Sum of Squares	415
23.4 Partitioning the $S \times C$ Sum of Squares	416
23.5 Expectation of Mean Squares and Tests of Significance	419
23.6 Conservative F Tests	420
23.7 Linear and Quadratic Components of the Stage (C) Sum of Squares	421
23.8 Linear Component of the Group \times Stage Sum of Squares	422
23.9 Partitioning the $G \times L$ or $AB \times L$ Sum of Squares	423
23.10 Partitioning the Quadratic Component of the $G \times C$ or $AB \times C$ Sum of Squares	425
23.11 Obtaining the Linear and Quadratic Components of the $S(AB) \times C$ Sum of Squares	426
23.12 Expectation of Mean Squares for Linear and Quadratic Components and Tests of Significance	427
<i>Questions and Problems</i>	429
24. THE ANALYSIS OF COVARIANCE FOR A RANDOMIZED GROUP DESIGN	432
24.1 Introduction	432
24.2 Partitioning the Total Product Sum	432
24.3 Relationship Between X and Y in the Absence of Treatment Effects	434

24.4	Relationship Between X and Y When Treatment Effects Are Present	436
24.5	Sums of Squares and Product Sums for a Randomized Group Design	437
24.6	Variation Within Each Group About the Regression Line for the Group	439
24.7	Variation Within Groups About a Regression Line with Slope b_w	441
24.8	Test of Homogeneity of the Regression Coefficients	442
24.9	Test of Significance of the Adjusted Treatment Mean Square	443
24.10	Adjusted Treatment Means and Tests of Comparisons	446
24.11	Efficiency of the Analysis of Covariance	447
24.12	Analysis of Variance of Difference Measures	448
24.13	A Split-Plot Analysis of Variance	450
24.14	A Randomized Block Design as an Alternative to the Analysis of Covariance	451
24.15	Analysis of Covariance and Other Experimental Designs	453
	<i>Questions and Problems</i>	453

25. MULTIPLE REGRESSION AND THE ANALYSIS OF VARIANCE AND COVARIANCE 456

25.1	Introduction	456
25.2	Multiple Regression with One Treatment Factor	457
25.3	Multiple Regression and the Analysis of Variance for Balanced Designs	460
25.4	The Analysis of Unbalanced or Nonorthogonal Designs	463
25.5	Tests for Trait-Treatment Interactions	467
	<i>Questions and Problems</i>	471

BIBLIOGRAPHY 473

APPENDIX A MATHEMATICAL EXPECTATION 481

A.1	Mean and Variance of a Population	481
A.2	Constants	482
A.3	Covariance and Independent Random Variables	482
A.4	Mean and Variance of a Difference	483
A.5	Expected Value of the Mean of a Random Sample	483
A.6	Variance of the Mean When σ^2 Is Known	484
A.7	Expected Value of s^2 and $s_{\bar{x}}^2$	485
A.8	Random Errors	485

APPENDIX B THE METHOD OF LEAST SQUARES 487

B.1	Introduction	487
B.2	The Derivative of a Power Function	488
B.3	The Derivative of a Power Function Involving an Added Constant	488

B.4	The Derivative of a Power Function When a Is a Coefficient	488
B.5	The Method of Least Squares	488
B.6	Another Method for Finding the Derivative of $Q = \sum (X - a)^2$	489
B.7	Least Squares Estimates of t_k and μ for a Randomized Group Design	490
B.8	Least Squares Estimates for a Two-Factor Experiment with a Randomized Group Design	491
B.9	Least Squares Estimates for a Randomized Block Design	493
B.10	Least Squares Estimates for a Latin Square Design	494
B.11	Least Squares Estimate of b_k	494

APPENDIX C MATRIX ALGEBRA 496

C.1	Definition of a Matrix	496
C.2	Addition and Subtraction of Matrices	496
C.3	Matrix Multiplication	497
C.4	The Matrix Product $X'X$	497
C.5	Orthogonal Comparison Matrices	499
C.6	Orthonormal Comparison Matrices	500
C.7	Inverse of a Matrix	500
C.8	Least Squares Solution in Multiple Regression	500

APPENDIX D TABLES 503

Table I.	Table of Random Numbers	504
Table II.	Significant Studentized Ranges for the TSD Test	509
Table III.	Areas and Ordinates of the Normal Curve in Terms of $Z = (X - \mu)/\sigma$	510
Table IV.	Table of χ^2	520
Table V.	Table of t	521
Table VI.	Values of the Correlation Coefficient for Different Levels of Significance	522
Table VII.	Table of z' Values for r	523
Table VIII.	The 5 (Roman Type) and 1 (Boldface Type) Percent Points for the Distribution of F	524
Table IX.	The 25, 10, 2.5, and 0.5 Percent Points for the Distribution of F	528
Table Xa.	Significant Studentized Ranges for the DMR Test with $P(E) = 1 - (1 - 0.10)^{k-1}$	532
Table Xb.	Significant Studentized Ranges for the DMR Test with $P(E) = 1 - (1 - 0.05)^{k-1}$	533
Table Xc.	Significant Studentized Ranges for the DMR Test with $P(E) = 1 - (1 - 0.01)^{k-1}$	534
Table Xd.	Significant Studentized Ranges for the DMR Test with $P(E) = 1 - (1 - 0.005)^{k-1}$	535
Table Xe.	Significant Studentized Ranges for the DMR Test with $P(E) = 1 - (1 - 0.001)^{k-1}$	536
Table XI.	Table of Coefficients for Orthogonal Polynomials	537

Table XIIa.	Table of t for One-sided Comparisons Between k Treatment Means and a Control for a Joint Confidence Coefficient of $P = 95$ Percent	538
Table XIIb.	Table of t for One-sided Comparisons Between k Treatment Means and a Control for a Joint Confidence Coefficient of $P = 99$ Percent	539
Table XIIc.	Table of t for Two-sided Comparisons Between k Treatments and a Control for a Joint Confidence Coefficient of $P = 95$ Percent	540
Table XIIId.	Table of t for Two-sided Comparisons Between k Treatments and a Control for a Joint Confidence Coefficient of $P = 99$ Percent	541
Table XIIIa.	Table of the Bonferroni t : $P(E) \leq 0.05$	542
Table XIIIb.	Table of the Bonferroni t : $P(E) \leq 0.01$	548
