<b>Preface</b>	<b>iii</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Robust Control</b>	<b>9</b>
2.1 Motivation and Overview . . . . .	9
2.2 Models of Uncertain Systems . . . . .	12
2.3 Design Requirements . . . . .	20
2.4 Qualitative Methods . . . . .	21
2.5 Quasiclassical Methods of the British School . . . . .	22
2.6 Quantitative Methods . . . . .	25
2.7 $\mathcal{H}_\infty$ Control Theory . . . . .	26
2.8 Limitations . . . . .	37
2.9 Main Points and Conclusions . . . . .	38
<b>3 Constraint Control</b>	<b>41</b>
3.1 Motivation and Overview . . . . .	41
3.2 General Results on Constraint Systems . . . . .	43
3.3 Anti Windup Bumpless Transfer . . . . .	45
3.4 Model Predictive Control . . . . .	49
3.5 $\mathcal{H}_\infty$ -related Methods . . . . .	52
3.6 Non-Conservative External Signals . . . . .	55
3.7 Main Points and Conclusions . . . . .	59
<b>4 <math>\mathcal{H}_\infty</math> Loop Shaping Design Procedure</b>	<b>61</b>
4.1 Preliminaries . . . . .	61
4.2 Basic Stability Results . . . . .	64

4.3	Uncertainty and Robust Stabilization . . . . .	66
4.4	Loop Shaping Design Procedure . . . . .	72
4.5	Main Points and Conclusions . . . . .	75
<b>5</b>	<b>The <math>\mathcal{H}_\infty</math> LSDP for Constraint Systems</b>	<b>77</b>
5.1	Maximum Control Variable . . . . .	78
5.2	Description of the Design Procedure . . . . .	81
5.3	Choice of the Weights . . . . .	83
5.4	Main Points and Conclusions . . . . .	86
<b>6</b>	<b>Design Examples</b>	<b>87</b>
6.1	Review of the Extended LSDP . . . . .	87
6.2	An Academic Example . . . . .	89
6.3	Tokamak Plasma Control . . . . .	96
6.4	Aircraft Dynamics Control . . . . .	100
6.5	Some Technical Remarks . . . . .	108
6.6	Main Points and Conclusions . . . . .	108
<b>7</b>	<b>Conclusions</b>	<b>111</b>
7.1	Review of Contributions and their Relevance . . . . .	111
7.2	Open Questions on the ELSDP . . . . .	113
7.3	Suggestions for Future Works . . . . .	113
	<b>Bibliography</b>	<b>115</b>
	<b>Subject Index</b>	<b>119</b>

# List of Figures

1.1	Control-loop with uncertain and constraint plant $G_{\Delta}$ . . .	2
2.1	Control loop with nominal plant $G$ and uncertain plant $G_{\Delta}$ . . . . .	10
2.2	Additive Error. . . . .	16
2.3	(Output) Multiplicative Error. . . . .	17
2.4	(Normalized) left coprime factor uncertainty. . . . .	17
2.5	Plant with mixed additive and multiplicative errors. . .	18
2.6	Uncertain plant from figure 2.5 – redrawn using generalized plant and block-structured error. . . . .	19
2.7	Feedback configuration with structured uncertainty $\Delta$ and generalized plant $P$ – the general case using the LFT framework. . . . .	20
2.8	$\mu$ -Synthesis using $K$ - $D$ -Iteration. . . . .	26
2.9	Model Matching Problem. . . . .	29
2.10	Generalized control loop for the mixed sensitivity problem. . . . .	30
2.11	Open loop shaping and controller design in three steps by McFarlane & Glover. . . . .	31
2.12	Generalized uncertainty model using LFT. . . . .	33
3.1	Control loop with bounded plant input $\ u\ _{\infty} \leq C$ . . . .	44
3.2	Control loop containing a saturation-nonlinearity. . . . .	44
3.3	Conventional Anti Windup (CAW) scheme. . . . .	46
3.4	Bumpless transfer between two anti windup controllers. . . . .	48
3.5	The general anti windup problem. . . . .	49
3.6	Structure inherent in all MPC schemes. . . . .	50
3.7	Definition of the optimization horizons for MPC. . . . .	51

3.8	SISO feedback system for direct consideration of plant constraints. . . . .	54
3.9	System $H$ with bounded (reference) input $r$ and (controller) output $u$ . . . . .	55
3.10	Pulse-shape of the worst case input. . . . .	58
4.1	Lower linear fractional transformation LLFT (left) and upper linear fractional transformation ULFT (right). . . . .	65
4.2	Generalized feedback arrangement. . . . .	65
4.3	Closed loop system, used by the Small Gain Theorem and the Generalized Nyquist Criterion. . . . .	66
4.4	(Normalized) left coprime factor uncertainty. . . . .	67
4.5	Plant uncertainty and controller description using LFT. . . . .	69
4.6	Plant shaping and controller design in three steps. . . . .	71
4.7	Standard control loop. . . . .	73
5.1	Control loop with constraint control variable $u$ . . . . .	78
5.2	Plant Shaping and controller design in three steps. . . . .	82
6.1	Control loop with constraint control variable $u$ . . . . .	88
6.2	Optimal design for $W = 1$ . . . . .	91
6.3	Optimal design for $W = 20$ . . . . .	91
6.4	Optimal design for $W = 0.01$ . . . . .	92
6.5	Optimal design for $W = 0.0817$ . . . . .	93
6.6	Optimal design for $W(s) = W_1(s)$ . . . . .	94
6.7	Optimal design for $W(s) = W_2(s)$ . . . . .	94
6.8	Comparison of the weights $W_1$ and $W_2$ . . . . .	95
6.9	Suboptimal design for $W(s) = W_2(s)$ . . . . .	96
6.10	Preliminary design for $W = W_{GL}$ . . . . .	98
6.11	Preliminary design for $W = W_1 = 1$ . . . . .	98
6.12	adjustment of the weights: $W_{GL}$ (above) and $W_{sol}$ (below). . . . .	99
6.13	Controller design for $W = W_{sol}$ . . . . .	100
6.14	McFarlane & Glover design: singular values of plant and achieved open loop. . . . .	102
6.15	McFarlane & Glover design: singular values of sensitivity and closed loop. . . . .	103

6.16	McFarlane & Glover design: singular values for the components of the control variable. . . . .	103
6.17	Adjustment of the weights: singular values of the diagonal entries $w_1$ and $w_2$ . . . . .	105
6.18	Design with adjusted weights: singular values of plant, achieved open loop, sensitivity and closed loop. . . . .	106
6.19	Design with adjusted weights: singular values for the components of the control variable. . . . .	107
