

# CONTENTS

---

## 1

### INTRODUCTION TO BASIC CONCEPTS IN EXPERIMENTAL DESIGN 1

- 1.1 Introduction 1
- 1.2 Definition of Basic Terms 2
- 1.3 Formulation of Plans for Collection and Analysis of Data 4
- 1.4 Overview of Types of Experimental Designs 11
- 1.5 A Review of Statistical Inference 22

## 2

### FUNDAMENTAL ASSUMPTIONS IN ANALYSIS OF VARIANCE 35

- 2.1 Basic Sampling Distributions in Analysis of Variance 35
- 2.2 Partition of Total Sum of Squares 43
- 2.3 Derivation of Computational Formulas 48
- 2.4 Expectation of Sum of Squares 50
- 2.5 The  $F$  Ratio in Analysis of Variance 59
- 2.6 Effects of Failure to Meet Assumptions in Analysis of Variance 60
- 2.7 Transformations 63

## 3

### MULTIPLE COMPARISON TESTS 69

- 3.1 Introduction to Multiple Comparison Tests 69
- 3.2 *A Priori* or Planned Comparisons 73
- 3.3 Conceptual Unit for Error Rate 82
- 3.4 *A Posteriori* Comparisons 87
- 3.5 Other Comparison Procedures 97

# 4

## COMPLETELY RANDOMIZED DESIGN 99

- 4.1 Description of Design 99
- 4.2 Layout of Design 100
- 4.3 Null and Alternative Hypotheses 101
- 4.4 Assumptions of the Model for Type CR- $k$  Design 102
- 4.5 Computational Procedures for Completely Randomized Design 104
- 4.6 Procedures for Testing Differences among Means 110
- 4.7 Tests for Trends in the Data 114
- 4.8 Measures of Correlation 126
- 4.9 Fixed-Effects and Random-Effects Models 127
- 4.10 Advantages and Disadvantages of Type CR- $k$  Design 129
- 4.11 Representative Applications of Completely Randomized Designs in the Research Literature 129

# 5

## RANDOMIZED BLOCK DESIGN 131

- 5.1 Description of Design 131
- 5.2 Layout of Design 132
- 5.3 Assumptions of the Model for Type RB- $k$  Design 135
- 5.4 Procedures for Testing Differences Among Means 144
- 5.5 Tests for Trends in the Data 145
- 5.6 Estimating Missing Observations 146
- 5.7 Relative Efficiency of Randomized Block Design 147
- 5.8 Advantages and Disadvantages of Type RB- $k$  Design 149
- 5.9 Representative Applications of Randomized Block Designs in the Research Literature 150

# 6

## LATIN SQUARE AND RELATED DESIGNS 151

- 6.1 Description of Design 151
- 6.2 Construction and Randomization of Latin Squares 152
- 6.3 Layout of Design 155
- 6.4 Assumptions of the Model for a Type LS- $k$  Design 159
- 6.5 Procedures for Testing Differences among Means 162
- 6.6 Estimating Missing Observations 162
- 6.7 Relative Efficiency of Latin Square Design with  $n=1$  164
- 6.8 Graeco-Latin Square Design 166
- 6.9 Hyper-Graeco-Latin Square Designs 168
- 6.10 Advantages and Disadvantages of Type LS- $k$  Design 169

# 7

## COMPLETELY RANDOMIZED, HIERARCHAL, AND RANDOMIZED BLOCK FACTORIAL DESIGNS 171

- 7.1 Introduction to Factorial Experiments 171
- 7.2 Description of Completely Randomized Factorial Design 171
- 7.3 Layout and Computational Procedures for Type CRF- $pq$  Design 173
- 7.4 Tests of Simple Main Effects in Type CRF- $pq$  Design 179
- 7.5 Assumptions of the Model for Type CRF- $pq$  Design 182
- 7.6 Procedures for Testing Differences among Means in Type CRF- $pq$  Design 188
- 7.7 Tests for Trends in Type CRF- $pq$  Design 189
- 7.8 Estimating Strength of Association in Type CRF- $pq$  Design 198
- 7.9 The Problem of Unequal Cell  $n$ 's 200
- 7.10 Rules for Deriving Expected Values of Mean Squares 208
- 7.11 Quasi  $F$  Ratios 212
- 7.12 Preliminary Tests on the Model and Pooling Procedures 214
- 7.13 Computational Procedures for Type CRF- $pqr$  Design 217
- 7.14 Completely Randomized Factorial Design with  $n=1$  227
- 7.15 Introduction to Hierarchal Experiment 229
- 7.16 Introduction to Randomized Block Factorial Design 237
- 7.17 Advantages and Disadvantages of Factorial Experiments 243
- 7.18 Representative Applications of Factorial Designs in the Research Literature 244

# 8

## SPLIT-PLOT DESIGN—FACTORIAL DESIGN WITH BLOCK-TREATMENT CONFOUNDING 245

- 8.1 Description of Design 245
- 8.2 Layout and Computational Procedures for Type SPF- $p.q$  Design 248
- 8.3 Check on Accuracy of Computational Formulas 251
- 8.4 Assumptions of the Model for Type SPF- $p.q$  Design 252
- 8.5 Test of Equality and Symmetry of Covariance Matrices for Type SPF- $p.q$  Design 256
- 8.6 Tests of Simple Main Effects in Type SPF- $p.q$  Design 263
- 8.7 Procedures for Testing Differences among Means in Type SPF- $p.q$  Design 266
- 8.8 Tests for Trends in Type SPF- $p.q$  Design 270
- 8.9 General Procedure for Determining Expected Values of Mean Squares in Type SPF- $p.q$  Design 275
- 8.10 The Problem of Missing Scores and Unequal Size Subgroups 276
- 8.11 Relative Efficiency of Split-Plot Design 282
- 8.12 Introduction to Type SPF- $pr.q$  Design 283
- 8.13 Computational Procedures for Type SPF- $pru.q$  Design 294
- 8.14 Computational Procedures for Type SPF- $p.qr$  Design 298

8.15	Computational Procedures for Type SPF- <i>p.qru</i> Design	308
8.16	Computational Procedures for Type SPF- <i>pr.qu</i> Design	311
8.17	Computational Procedures for Type SPF- <i>pr.quv</i> Design	313
8.18	Evaluation of Sequence Effects	317
8.19	Advantages and Disadvantages of Split-Plot Design	317
8.20	Representative Applications of Split-Plot Designs in the Research Literature	318

## 9

### CONFOUNDED FACTORIAL DESIGNS—FACTORIAL DESIGNS WITH BLOCK-INTERACTION CONFOUNDING 319

9.1	Introduction to Confounding in Factorial Experiments	319
9.2	Use of Modular Arithmetic in Constructing Confounded Designs	321
9.3	Complete versus Partial Confounding	326
9.4	Computational Procedures for Type RBPF- $3^2$ Design	327
9.5	Computational Procedures for Type RBPF- $3^2$ Design with Repeated Measurements	336
9.6	Computational Procedures for Type RBCF- $2^3$ Design	339
9.7	Computational Procedures for Type RBPF- $2^3$ Design	348
9.8	General Description of Analysis Procedures for Higher-Order Confounded Designs	356
9.9	Alternative Notation and Computational Systems	363
9.10	Layout and Computational Procedures for Type RBPF- $32^2$ Design	366
9.11	Block Confounding by Means of a Latin Square	375
9.12	Double Confounding	380
9.13	Advantages and Disadvantages of Confounding in Factorial Designs	382
9.14	Representative Applications of Confounded Factorial Designs in the Research Literature	383

## 10

### FRACTIONAL FACTORIAL DESIGNS—FACTORIAL DESIGNS WITH TREATMENT-INTERACTION CONFOUNDING 385

10.1	Introduction to Fractional Factorial Designs	385
10.2	General Procedures for Constructing Type CRFF- $2^k$ Designs	387
10.3	Computational Procedures for Type CRFF- $2^4$ Design	390
10.4	Computational Procedures for Type CRFF- $3^4$ Design	394
10.5	General Procedures for Constructing Type RBFF- $2^k$ Designs	400
10.6	Other Types of CRFF and RBFF Designs	403
10.7	Introduction to Latin Square Fractional Factorial Design	403
10.8	Computational Procedures for Type LSFF- <i>p.p</i> <sup>2</sup> Design	406
10.9	Computational Procedures for Type LSFF- <i>p</i> <sup>3</sup> <i>u</i> Design	412
10.10	Computational Procedures for Type LSFF- <i>p</i> <sup>4</sup> <i>v</i> Design	418

- 10.11 Computational Procedures for Type GLSFF- $p^3$  Design 420
- 10.12 Advantages and Disadvantages of Fractional Factorial Designs 420
- 10.13 Representative Applications of Fractional Factorial Designs in the Research Literature 421

## 11

### INCOMPLETE BLOCK DESIGNS 423

- 11.1 Introduction to Incomplete Block Designs 423
- 11.2 Enumeration of Plans for Balanced Incomplete Block Designs 424
- 11.3 Layout and Computational Procedures for Type BIB-6 Design 427
- 11.4 Assumptions of the Model for Type BIB- $t$  Design 432
- 11.5 Comparisons among Means for Type BIB-6 Design 434
- 11.6 Estimating Missing Observations in Type BIB- $t$  Design 436
- 11.7 Type BIB- $t$  Design in Distinct Replications 437
- 11.8 Type BIB- $t$  Design with  $rw$  Replications 439
- 11.9 Introduction to Youden Squares 441
- 11.10 Layout and Computational Procedures for Type YBIB-6 Design 443
- 11.11 Type YBIB- $t$  Design with  $rw$  Replications 448
- 11.12 Other Incomplete Block Designs 450
- 11.13 Advantages and Disadvantages of Incomplete Block Designs 454

## 12

### ANALYSIS OF COVARIANCE 455

- 12.1 Introduction to Analysis of Covariance 455
- 12.2 Rationale Underlying Covariate Adjustment 458
- 12.3 Layout and Computational Procedures for Type CRAC- $k$  Design 465
- 12.4 Assumptions of the Model for Type CRAC- $k$  Design 469
- 12.5 Procedures for Testing Differences among Means in Type CRAC- $k$  Design 471
- 12.6 Analysis of Multiple Covariance 472
- 12.7 Analysis of Covariance for Randomized Block Design 475
- 12.8 Analysis of Covariance for Latin Square Design 479
- 12.9 Analysis of Covariance for Factorial Experiments 479
- 12.10 Covariance versus Stratification 486
- 12.11 Advantages and Disadvantages of Analysis of Covariance 488
- 12.12 Representative Applications of Analysis of Covariance in the Research Literature 488

# 13

## **NONPARAMETRIC ANALYSIS OF MULTIGROUP EXPERIMENTS    491**

- 13.1 Introduction to Nonparametric Methods    491
- 13.2 Kruskal-Wallis One-Way Analysis of Variance by Ranks    493
- 13.3 Friedman Two-Way Analysis of Variance by Ranks    498
- 13.4 Other Nonparametric Tests for  $k \geq 3$  Treatment Levels    502
- 13.5 Advantages and Disadvantages of Nonparametric Multigroup Designs    503

## **APPENDIX A / RULES OF SUMMATION    505**

## **APPENDIX B / RULES OF EXPECTATIONS    509**

## **APPENDIX C / ORTHOGONAL COEFFICIENTS FOR UNEQUAL INTERVALS AND UNEQUAL $n$ 's    513**

## **APPENDIX D / TABLES    519**

## **GLOSSARY OF TERMS    553**

## **REFERENCES    559**

## **INDEX    571**
