

CONTENTS

PREFACE ix

1

WHY STUDY BEHAVIOR SCIENTIFICALLY? 3

Using research methods 3

The scientific approach 5

The relevance of behavioral research 7

2

WHERE TO START 11

Sources of ideas 11

Library research 17

Anatomy of a research article 18

A little bit about statistics 21

3

EXPERIMENTAL AND CORRELATIONAL METHODS 27

Relationships between variables 27

Types of relationships 28

Correlational method versus experimental method	31
Independent and dependent variables	36
Prediction versus control	36
Uses of the correlational method	37

4

MEASUREMENT OF BEHAVIOR	43
Operational definitions	43
Methods for measuring behavior	45
Evaluating measures of behavior	54

5

EXPERIMENTAL DESIGN: PURPOSES AND PITFALLS	61
Confounding and internal validity	62
Poorly designed experiments	63
Well designed experiments	67

6

CONDUCTING AN EXPERIMENT	73
Manipulating the independent variable	74
Measuring the dependent variable	79
Specific control groups	81
Theoretical internal validity	82
Debugging the experiment	84
Debriefing	86
Analyzing and interpreting results	87
Writing the research report	87

7

CHOOSING AND ASSIGNING SUBJECTS	91
Sampling techniques	91
Assigning subjects	95
Single-subject experiments	100

8

ANALYSIS OF RESEARCH RESULTS	105
Samples and populations	106
Frequency distributions	107
Descriptive statistics	108
Inferential statistics	108

Null hypothesis	109
Probability and rare events	110
The F Test	112
Type I and Type II errors	114
Interpreting negative results	115
Choosing a significance level	116

9

CORRELATIONAL RESEARCH TECHNIQUES	121
Fundamental procedures	121
Indexing the strength of a relationship	122
Important considerations	125
Reliability and correlation coefficients	127
Multiple correlation	128
Partial correlation and the third variable problem	129
Time-lagged correlations and the cause-effect problem	130

10

COMPLEX EXPERIMENTAL DESIGNS	135
Increasing the number of dependent variables	135
Increasing the number of levels of an independent variable	136
Increasing the number of independent variables: factorial designs	138

11

GENERALIZING RESULTS	153
Generalizing to other subject populations	153
Generalizing to other experimenters	157
Experimenter bias	158
Pretests and generalization	160
Demand characteristics	161
Field experiments	163
Replications: exact and conceptual	164

12

ETHICAL CONCERNS	169
Milgram's obedience experiment	169
Stress and psychological harm	171
Deception and the principle of informed consent	172

Debriefing	174
Alternatives to deception	175
Other ethical issues in research	179
Formulation of ethical principles	179
Ethics and the uses of psychology	182
Ethics and animal research	182
Ethics and clinical practice	183

13

THE EXPERIMENTING SOCIETY	187
Giving behavioral science away	187
Reforms as experiments	189
Methods for the experimenting society	190
Concluding remarks	193

APPENDIX A WRITING RESEARCH REPORTS	197
-------------------------------------	-----

APPENDIX B STATISTICAL TESTS	227
------------------------------	-----

APPENDIX C STATISTICAL TABLES	259
C-1 Random numbers	261
C-2 Critical values of Chi-square	263
C-3 Critical values of the Mann-Whitney U	264
C-4 Critical values of F	267
C-5 Critical values of Rho (Spearman rank-order correlation coefficient)	270
C-6 Critical values of r (Pearson product-moment correlation coefficient)	271

GLOSSARY	273
