Foreword ix

Sol L. Garfield

Preface xiii

Glenys Parry and Fraser Watts

PART I: SKILLS 1

1. More Fun, Less Stress: How to Survive in Research 3

Ray Hodgson and Stephen Rollnick

Getting Started Will Take at Least as Long as the Data Collection 4

The Number of Available Subjects Will be One-tenth of Your First Estimate 4

Completion of a Research Project will Take Twice as Long as Your Last Estimate and Three Times as Long as Your First 5

A Research Project will Change Twice in the Middle 5

The Help Provided by Other People has a Half-life of Two Weeks 6

The Tedium of Research is Directly Proportional to its Objectivity 6

The Effort of Writing Up is an Exponential Function of the Time Since the Data Were Collected 6

Evidence is Never Enough 7

Form a Team 8

One Day at a Time 8

Keep in Mind the Payoffs 9

Avoiding Helplessness 11

Doubting and Questioning 11

The Research Game 12

References 13

2. Preparing a Research Project 15

Edgar Miller

Selecting a Problem Area	16
The Background	18
Formulating a Question or Hypothesis	20
Designing the Investigation	21
Ethical Issues	25
Final Comments	25
References	26

3. Selecting and Developing Measures 27

Graham E. Powell

What is Measurement?	27
Types of Measure: Scaling	28
Types of Measure: Techniques	32
Properties of Measures; Reliability	34
Properties of Measures: Validity	37
Properties of Measures: Generalisability	40
A Practitioner Approach to Measurement	43
A Research Approach to Measurement	44
Summary	51
References	52

4. Analysing Data 55

Paul R. Jackson

Robust Measures	56
Univariate Summaries of Shape	59
Making Local Structure Clear—Smoothing	60
Hypothesis Testing	64
Regression—Global Summaries of Dependence	69
Analysis of Interactions	75
Conclusions	78
References	78

5. Using Computers 81

Christopher J. Colbourn

Computers in the Research Process: an Overview	81
Main Functions: a More Detailed Look	83
Practical Advice on Acquiring Computing Skills and Choosing Appropriate Hardware and Software	95
Conclusions	97
Glossary of Some Commonly Used Computing Terms	97
References	100

6. Writing a Research Report 105

Glenys Parry

How to Start	105
--------------	-----

The Outline	108
The First Draft	110
Subsequent Drafts	115
Preparing the Manuscript for Submission	117
The Editorial Process	119
Common Problems	120
References	122
7. Writing a Grant Application	123
<i>Neil Brooks</i>	
The Research Application—How to Fill it In	124
Discussion	131
Sources of Funding	132
References	133
Appendix: Some Sources of Research Funding	133
PART II: METHODS	137
8. Experimental Abnormal Psychology	139
<i>Fraser N. Watts</i>	
Research on Clinically Important Dysfunctions	140
Differential Deficit Hypotheses	145
Dysfunctions of Aetiological Importance	153
Conclusions	159
References	159
9. Outcome Research	163
<i>David A. Shapiro</i>	
Choice, Compromise and Informativeness	163
Choosing a Design	164
Four Types of Invalidity	167
Making Sense of Existing Outcome Research	178
Costs, Benefits and Effectiveness	182
Conclusion	183
References	184
10. Patient Series and Quasi-Experimental Designs	189
<i>R. Glynn Owens, P. D. Slade and D. M. Fielding</i>	
Patient Series Designs	190
Quasi-Experimental Designs	197
Summary and Conclusions	206
References	208
11. Qualitative Research	211
<i>David A. Good and Fraser N. Watts</i>	
Therapeutic Discourse—an Eclectic Approach to Conversation	214
Participant Observation	217
Account Analysis	220

Categorisation Studies	223
Case Studies	225
Conclusions	229
References	230

12. Single Case Research 233

Stephen Morley

A Prototype Case Study	234
Some Basic Issues in Single Case Research	236
Elements of Experimental Design	240
Basic Experimental Designs	245
Comparing More Than One Treatment Within an Individual	250
Analysis and Display of Single Case Data	256
Conclusion	261
References	261

13. Intensive Quantitative Methods 265

Paul Alexander

Self-report and Observational Measures	266
Types of Design	270
An Example of Intensive Research	281
Summary	283
References	284

14. Epidemiological and Survey Methods 287

David J. Cooke

What is Epidemiology?	287
Why is Epidemiology Important?	288
The Design of Epidemiological Studies	291
Selecting Measurement Procedures	294
Analysis of Information	298
Practical Problems in the Organisation of Epidemiological Research	310
References	313

15. Research in Service Planning and Evaluation 317

Geoff Shepherd

Research and Planning Overall Service Developments	318
Research and Planning Specific Projects	331
Research Designs	335
Conclusions	337
References	338

Indices 341
