Preface	ix
Epigram	xi
1. The Single-case in Basic and Applied Research: An Historical Perspective	1
1.1. Introduction	1
1.2. Beginnings in Experimental Physiology and Psychology	2
1.3. Origins of the Group Comparison Approach	5
1.4. Development of Applied Research: The Case Study Method	8
1.5. Limitations of the Group Comparison Approach	14
1.6. Alternatives to the Group Comparison Approach	17
1.7. The Scientist-Practitioner Split	21
1.8. A Return to the Individual	23
1.9. The Experimental Analysis of Behavior	29
2. General Issues in a Single-case Approach	32
2.1. Introduction	32
2.2. Variability	33
2.3. Experimental Analysis of Sources of Variability Through Improvised Designs	39
2.4. Behavior Trends and Intrasubject Averaging	45
2.5. Relation of Variability to Generality of Findings	49
2.6. Generality of Findings	50
2.7. Limitations of Group Designs in Establishing Generality of Findings	51
2.8. Homogeneous Groups Versus Replication of a Single-Case Experiment	56
2.9. Applied Research Questions Requiring Alternative Designs	62
2.10. Blurring the Distinction Between Design Options	64

3. General Procedures in Single-case Research	67
3.1. Introduction	67
3.2. Repeated Measurement	68
3.3. Choosing a Baseline	71
3.4. Changing One Variable at a Time	79
3.5. Reversal and Withdrawal	88
3.6. Length of Phases	95
3.7. Evaluation of Irreversible Procedures	101
3.8. Assessing Response Maintenance	105
4. Assessment Strategies	107
4.1. Introduction	107
4.2. Selecting Target Behaviors	109
4.3. Tracking the Target Behavior Using Repeated Measures	110
4.4. Other Assessment Techniques	131
5. Basic A-B-A Withdrawal Designs	140
5.1. Introduction	140
5.2. A-B Design	142
5.3. A-B-A Design	152
5.4. A-B-A-B Design	157
5.5. B-A-B Design	166
5.6. A-B-C-B Design	170
6. Extensions of the A-B-A Design, Uses in Drug Evaluation, and Interaction Design Strategies	174
6.1. Extensions and Variations of the A-B-A Withdrawal Design	174
6.2. A-B-A-B-A-B Design	175
6.3. Comparing Separate Therapeutic Variables, or Treatments	177
6.4. Parametric Variations of the Basic Therapeutic Procedures A-B-A-B'-B''-B''' Design	179
6.5. Drug Evaluations	183
6.6. Strategies for Studying Interaction Effects	193
6.7. Changing Criterion Design	205
7. Multiple Baseline Designs	209
7.1. Introduction	209
7.2. Multiple Baseline Designs	210
7.3. Variations of Multiple Baseline Designs	244
7.4. Issues in Drug Evaluation	249

8. Alternating Treatments Design	252
8.1. Introduction	252
8.2. Procedural Considerations	256
8.3. Examples of Alternating Treatments Designs	265
8.4. Advantages of the Alternating Treatments Design	280
8.5. Visual Analysis of the Alternating Treatments Design	281
8.6. Simultaneous Treatment Design	282
9. Statistical Analyses for Single-case Experimental Designs	285
9.1. Introduction	285
9.2. Special Data Characteristics	287
9.3. The Role of Statistical Evaluation in Single-Case Research	290
9.4. Specific Statistical Tests	293
9.5. Time Series Analysis	296
9.6. Randomization Tests	302
9.7. The R_n Test of Ranks	308
9.8. The Split-Middle Technique	312
9.9. Evaluation of Statistical Tests: General Issues	319
9.10. Conclusions	321
10. Beyond the Individual: Replication Procedures	325
10.1. Introduction	325
10.2. Direct Replication	326
10.3. Systematic Replication	347
10.4. Clinical Replication	366
10.5. Advantages of Replication of Single-Case Experiments	370
Hiawatha Designs an Experiment	372
References	374
Subject Index	405
Name Index	409
About the Authors	419
