

# Contents

	Page
<b>Invited Paper</b>	
<b>1.1 Fiber optic sensors for industrial applications</b> A.L. Harmer, Switzerland	17
<b>Flow and laser Doppler anemometer (LDA)</b>	23
<b>1.2 Optical fiber flowmeters</b> G.D. Pitt*, A. H. Prabakaran* <sup>+</sup> , R.J. Williamson <sup>#</sup> , D.N. Batchelder <sup>#</sup> *Standard Telecommunication Laboratories, U.K. <sup>+</sup> University of London, U.K. <sup>#</sup> University of Bradford, U.K.	
<b>1.3 Glassfiber LDA-systems and their application to internal combustion engines</b> F. Durst, H. Krebs University of Erlangen-Nürnberg, F.R.G.	29
<b>1.4 Monomode fiber optic vortex shedding flowmeter</b> P.A. Leilabady, J.D.C. Jones, D.A. Jackson The University of Kent, U.K.	35
<b>1.5 Signal enhancement of a fiber-optic LDV using a high-power Ar-ion laser oscillating in Multi-longitudinal modes</b> K.Kyuma, K. Kojima, M. Nunoshita, T. Nakayama Mitsubishi Electric Co., Japan	39
<b>Magnetometers</b>	
<b>2.1 Optical fiber magnetometer using a stabilized semiconductor laser source</b> R.H. Pratt <sup>+</sup> * ; R.E. Jones*, P.Extance , G.D. Pitt K.W. Foulds <sup>+</sup> *Standard Telecommunication Laboratories, U.K. <sup>+</sup> University of Surrey, U.K.	45
<b>2.2 Closed-loop d.c. field fiber-optic magnetometer</b> A.D. Kersey, M. Corke, D.A. Jackson The University of Kent, U.K.	51

### 2.3 Design and application of fiber-optic electric and magnetic field sensor for high voltage electric systems

Y. Ohno\*, K. Kurosawa<sup>+</sup>,  
T. Yoshino<sup>#</sup>

\*Nihon University, Japan

<sup>+</sup>Tokyo Electric Power Co.,  
Japan

<sup>#</sup>The Tokyo University, Japan

### 2.4 Effects of nonlinear magnetostrictive properties in a fiber optic magnetometer

K.P. Koo, A. Dandridge,  
G.H. Sigel, Jr.  
Naval Research Laboratories,  
U.S.A.

59

## Chemical sensors

### 3.1 Single-mode fiber evanescent wave spectroscopy

A. Lew\*, C. Depeursinge<sup>\*</sup>,  
F. Cochet<sup>#</sup>, H. Berthou<sup>#</sup>,  
O. Parriaux

\*Swiss Federal Institute of  
Technology, Switzerland

<sup>#</sup>Swiss Foundation for  
Microtechnology Research,  
Switzerland

71

### 3.2 Detection of antibody-antigen reactions at a glass-liquid interface: A novel fiber-optic sensor concept

C. Dähne, R.M. Sutherland,  
J.F. Place, A.S. Ringrose  
Battelle, Switzerland

75

### 3.3 Resonant photoacoustic gas spectrometer fiber-sensor

Q. Munir, R. Bättig, H.P. Weber  
University of Berne,  
Switzerland

81

### 3.4 An infrared fiber optic gas detection system

S. Stueflotten, T. Christensen,  
S. Iversen, J.O. Hellvik,  
K. Almås, T. Wien, A. Graav  
A/S Elektrisk Bureau, Norway

87

- 4.1 **Optical fiber sensors in medicine** 93  
A.M. Scheggi, Italy
- 4.2 **A multipurpose cross-talk sensor using multimode fibers** 105  
S. Ramakrishnan, R.Th. Kersten  
Fraunhofer-Institut für  
Physikalische Meßtechnik,  
F.R.G.
- 4.3 **Wavelength encoded optical fiber sensors** 111  
M.C. Hutley  
National Physical Laboratory,  
U.K.
- 4.4 **A balancing technique for optical fiber intensity modulated transducers** 117  
J.Foley<sup>#</sup>, I.P. Giles<sup>\*</sup>,  
B. Culshaw<sup>#</sup>  
<sup>#</sup>University College London,  
U.K.  
<sup>\*</sup>University of Strathclyde, U.K.
- 4.5 **Distributed sensing using stimulated Raman interaction in a monomode optical fiber** 121  
M.C. Farries<sup>\*</sup>, A.J. Rogers<sup>#</sup>  
<sup>\*</sup>King's College London, U.K.  
<sup>#</sup>Central Electricity Research  
laboratories, U.K.
- 4.6 **Scintillating and fluorescent fibers sensors applications** 133  
R.L. Allemann, J. Calvet,  
J.C. Cavan, J.C. Thevenin,  
B. Chiron  
Commissariat a l'Energie  
Atomique, France
- 4.7 **Fiber Optic sensor for high energy radiation** 143  
C.R. Batchellor, D. Carless  
Plessey Electronic Systems  
Research, U.K.

- 5.1 Fiber-optic temperature probe using fluorescence decay time: sinusoidal oscillation** 151  
 Th. Bosselmann<sup>#</sup>, A. Reule<sup>#</sup>,  
 J. Schröder<sup>#</sup>  
 Technische Universität  
 Hamburg-Harburg, F.R.G.  
<sup>#</sup>Carl Zeiss, F.R.G.
- 5.2 Thermochromic transducer optical fiber temperature sensor** 155  
 M. Brenchi, G. Conforti, R. Falciai,  
 A.G. Mignani, A.M. Scheggi  
 IROE-CNR, Italy
- 5.3 Radiometric temperature measurement using infrared optical fibers** 161  
 M. Shimizu, M. Shimoishizaka,  
 S. Yoshida  
 The Furukawa Electric Co.,  
 Japan
- 5.4 Fiber-Fabry-Perot (FFP) thermometer for medical applications** 165  
 R. Kist, S. Drope,  
 H. Wölfelschneider  
 Fraunhofer-Institut für  
 Physikalische Meßtechnik,  
 F.R.G.

**Fiber optic sensor market (Panel)**

- Sensor markets** 173  
 W.N. Bravard,  
 Market Intelligence Research  
 Company, U.S.A.
- Fiber sensor market development** 177  
 J. Zilber,  
 Kessler Marketing Intelligence,  
 U.S.A.

**Poster Papers**

- P1 withdrawn
- P2 **Vibrations sensor using planar integrated interferometric circuit on oxidised silicon substrate** 187  
 P. Gidon, S. Valette,  
 P. Schweizer  
 LETI, France

	Page
P3 <b>Multimode fiber-optic accelerometers</b> L.Jonsson, B. Hök ASEA Innovation, Sweden	191
P4 <b>Fiber-optic polarization interferometer for temperature sensing using a polarization rotating coupler</b> Y. Mitsuhashi, S. Ishihara Electrotechnical Laboratory, Japan	195
P5 <b>Displacement and temperature multimeasurant transducer</b> E. Theocharous Central Electricity Research Laboratories, U.K.	199
P6 <b>Novel fiber coupler for optical fiber temperature sensor</b> G. Schöner, M. Steiner, J.H. Bechtel, M.M. Salour TACAN Corporation, U.S.A.	203
P7 <b>Sensitive liquid sensor for long distance leak detection</b> M. Shimizu, M. Nagai, N. Oogi NEC Corporation, Japan	207
P8 <b>All-optical remote gas sensor system over a 20 km range based on low-loss optical fibers in the near infrared</b> H. Inaba, K. Chan, H. Ito Tohoku University, Japan	211
P9 <b>Integrated optical humidity and gas sensors</b> K. Tiefenthaler, W. Lukosz Swiss Federal Institute of Technology, Switzerland	215
P10 <b>Film thickness monitoring with a fiber optic realtime spectrophotometer</b> H.-E. Korth IBM Germany, F.R.G.	219
P11 <b>Optical fiber pressure sensor using a shutter modulator and two-wavelength intensity referencing</b> B.E. Jones, R.C. Spooncer UMIST, U.K.	223

- P12 **Remote spectroscopy with optical fibers: Development since ten years and perspectives in on-line control**  
G. Boisde, J.J. Perez  
Centre d'Etudes Nucleaires,  
France
  
- P13 **Accurate fiber-optical sensors using differential heterodyne method** 233  
I. Yoshino, M. Nara  
University of Tokyo, Japan  
National Research Laboratory of Metrology, Japan
  
- P14 **A multimode fiber heterodyne interferometer** 237  
W.L. Glomb, Jr, F. Mottier  
United Technologies Research Center, U.S.A.
  
- P15 **Operation of a compensated polarimetric sensor with semiconductor light source** 241  
J.P. Dakin, S. Broderick,  
D.C. Carless, C.A. Wade  
Plessey Electronic System Research, U.K.
  
- P16 **Linearized remote sensing using a monomode fiber polarimetric sensor** 247  
A.D. Kersey, M. Corke,  
D.A. Jackson  
The University of Kent, U.K.
  
- P17 **Fiber optic gyro with digital data processing** 251  
K. Böhm, P. Marten, L. Staudigel,  
E. Weidel  
AEG-Telefunken, F.R.G.
  
- P18 **Fiber gyro with integrated-optic phase modulator and spectrally broad light source** 259  
G. Domann  
Standard Elektrik Lorenz AG,  
F.R.G.
  
- P19 **Fiber gyroscope with pseudo-heterodyne detection** 263  
A.D. Kersey, A.C. Lewin  
D.A. Jackson  
The University of Kent, U.K.

- P20 **Rotation sensors on the base of monomode fibers with low birefringence**  
E.M. Dianov, A.Y. Karasik,  
V.A. Kozlov, A.M. Prokhorov,  
A.K. Senatorov, G.G. Devjatykh,  
A.N. Gurjanov, D.D. Gusovsky  
Akademy of Sciences of the  
USSR, USSR
- sP21 **Compact all-fiber gyroscope brassboard** 271  
H.C. Lefevre, H.J. Arditty\*,  
Ph. Graindorge  
Thomson-CSF, France  
now with: Photonetics, France
- P22 **A family of multicore optical fiber based sensors and instrumentation systems** 275  
R.S. Romaniuk, J. Dorosz#  
Technical University of  
Warsaw, Poland  
#Glass Works of Bialystok,  
Poland
- P23 **Review of "all-fiber" modulators for fiber optic systems** 279  
R.P. De Paula  
Litton, U.S.A.

### Invited paper:

- 6.1 **Signal processing for distributed optical fiber sensors** 285  
D.E.N. Davies, U.K.

### Gyroscopes

- 6.2 **Optical fiber gyroscope with integrated optical frequency modulator** 297  
M. Shimizu, N. Oogi  
NEC Corporation, Japan

- 6.3 **Integrated optic fiber gyroscope with on-chip modulator and harmonic feedback operation** 301  
J.W. Parker, M.C. Bone, E. Jones  
Standard Telecommunication Laboratories, U.K.
- 6.4 **Thermal sensitivity of sensing coils for fiber gyroscopes** 305  
F. Mohr, W. Auch, P. Kiesel  
Standard Elektrik Lorenz AG,  
F.R.G.
- 6.5 **Polarisation control in resonant-ring fiber gyroscopes** 309  
R.J. Mears, M.P. Varnham,  
D.N. Payne, A.J. Barlow  
The University of Southampton,  
U.K.
- 6.6 **Rayleigh backscattering in optical passive ring-resonator gyro** 313  
K. Iwatsuki, K. Hotate,  
M. Higashiguchi  
University of Tokyo, Japan
- 6.7 **Coherent backscatter in optical fiber gyroscopes** 317  
I.P. Giles, B. Culshaw  
University of Strathclyde, U.K.
- 6.8 **Integrated-Optics fiber gyroscope: Progress towards a tactical application** 321  
H.J. Arditty, J.P. Bettini,  
Y. Bourbin, Ph. Graindorge,  
H.C. Lefevre, M. Papuchon,  
S. Vatoux  
Thomson-CSF, France  
now with: Photonetics, France

## Sensor components

- 7.1 **Comparison between coil and taper fiber polarizers** 329  
M.P. Varnham, F. de Fornel\*,  
D.N. Payne, C.M. Ragdale,  
A.J. Barlow, E.J. Tavbox  
The University of Southampton,  
U.K.  
\* on leave from University of  
Limoges, France  
# on leave from British  
Aerospace, U.K.

- 7.2 **YIG-sensor design for fiber optical magnetic field measurements**  
U. Holm, H. Sohlström,  
T. Brogårdh  
Royal Institute of Technology,  
Sweden
- 7.3 **Low frequency characterization of 1.3  $\mu\text{m}$   $\text{C}^3$  lasers** 337  
R.O. Miles<sup>†</sup>, A. Dandridge<sup>\*</sup>,  
A. Olssen<sup>‡</sup>  
Naval Research Laboratories,  
U.S.A.  
<sup>†</sup>Bell Laboratories, U.S.A.
- 7.4 **Practical coherent OTDR at 1.3  $\mu\text{m}$**  347  
S. Wright, R.E. Epworth,  
D.F. Smith, J.P. King  
Standard Telecommunication  
Laboratories, U.K.
- Invited paper:**
- 8.1 **Optical fibers for sensors** 353  
D.N. Payne, U.K.
- Interferometers**
- 8.2 **High accuracy position-sensing with fiber-coupled white-light interferometers** 361  
Th. Bosselmann, R. Ulrich  
Technische Universität  
Hamburg-Harburg, F.R.G.
- 8.3 **Interferometric investigation of monomode fibers under longitudinal stress** 365  
A. Bertholds, R. Dändliker  
Institut de Microtechnique de  
l'Universite de Neuchâtel,  
Switzerland
- 8.4 **Experimental performance of an optical hydrophone with downlead insensitivity** 369  
S.W. Thornton, M.L. Henning  
Plessey Marine Ltd., U.K.
- 8.5 **Optical fiber hydrophone array - recent progress** 375  
C.A. Wade, J.P. Dakin  
Plessey Electronic System  
Research, U.K.

**8.6 Digital single-sideband detection for interferometric sensors**

D. Eberhard, E. Voges  
Universität Dortmund, F.R.G.

**Displacement, pressure, vibration sensors**

**9.1 Displacement sensing using a compensated fiber link**

387

D.E.N. Davies, J. Chaimowicz,  
G. Economou, J. Foley,  
K. Mallalieu  
University College London,  
U.K.

**9.2 Pressure sensor with fluorescence decay as information carrier**

391

B. Hök, L. Jonsson  
ASEA Innovation, Sweden

**9.3 Polarimetric strain and pressure sensor using temperature independent polarization maintaining optical fiber**

395

Y. Kikuchi, R. Yamauchi,  
M. Akiyama, O. Fukuda, K. Inada  
Fujikura Ltd., Japan

**9.4 Fiberoptic strain measurement for structural integrity monitoring**

399

A.J.A. Bruinsma<sup>\*</sup>,  
<sup>3</sup>P. van Zuylen<sup>#</sup>, C.W. Lamberts<sup>#</sup>,  
A.J.T. Krijger<sup>#</sup>  
Institute of Applied Physics  
TNO-TH, The Netherlands  
<sup>#</sup>Physics Laboratory TNO, The Netherlands

**9.5 Fiber-optic vibrometer**

403

M. Martinelli, A. Ceserani,  
M. Polini  
CISE S.p.A., Italy

**9.6 Optical fiber sensing system for three dimensional vibration measurements**

415

Y. Hirose, Y. Tsuzuki  
Yokohama National University,  
Japan
