Introduction	iii
Acknowledgements	v
Chapter 1. Preliminaries and notation	1
1.1. Algebras and modules	1
1.2. Banach function algebras	2
1.3. Weighted discrete convolution algebras	3
1.4. Fourier algebras	5
Chapter 2. Ideal structure	9
2.1. Primary ideals of $A_{\alpha}^{+}(\mathbf{D})$	9
2.2. The coset ring and approximate identities in ideals of $A(G)$	17
2.3. The π -property	29
Chapter 3. Discontinuous derivations	33
3.1. Point derivations on non-unital algebras	34
3.2. Discontinuous derivations from $A_{\alpha}^{+}(\mathbf{D})$	38
3.3. Derivations from a local Banach algebra which are unbounded on the polynomials	51
Chapter 4. Finite-dimensional extensions	65
4.1. Extensions of Fourier algebras	66
4.2. Extensions of $A_{\alpha}^{+}(\mathbf{D})$	73
Bibliography	87
