**Introduction** 1

**Scenario 1: Exploiting Locality in Networks of Limited Bandwidth** 5
1.1 Formal description of the problem . . . 6
1.1.1 Description of the static model . . . 6
1.1.2 Description of the dynamic model . . . 7
1.2 Previous and related work . . . 8
1.3 Summary of new results . . . 10
1.4 Data management on tree-connected networks . . . 12
1.4.1 Static placement on trees . . . 12
1.4.2 Dynamic data management on trees . . . 16
1.5 Data management on meshes . . . 18
1.5.1 Static placement on meshes . . . 18
1.5.2 Dynamic data management on meshes . . . 23
1.6 Data management on clustered networks . . . 28
1.7 More general and other models . . . 33
1.7.1 Non-uniform object sizes and slice-wise accesses . . . 33
1.7.2 Other update policies . . . 34
1.7.3 An alternative model for dynamic data management . . . 36
1.8 Experimental evaluation of the access tree strategy . . . 37
1.8.1 Matrix multiplication . . . 40
1.8.2 Bitonic sorting . . . 44
1.8.3 Barnes-Hut N-body simulation . . . 48
1.9 Conclusions . . . 54

**Scenario 2: Contention Resolution on a Scalable Multimedia Data Server** 57
2.1 Design objectives and constraints . . . 58
2.2 A new proposal for a scalable data server architecture . . . 59
2.3 Summary of new results . . . 61
2.4 Previous and related results . . . 62
2.5 Serving batches of distinct requests . . . 65
2.5.1 The collision protocol . . . 66
2.5.2 Asymptotical analysis of the collision protocol . . . 66
2.5.3 Numerical analysis of the collision protocol . . . 73
2.5.4 Simulation results . . . 78
2.6 Serving batches including data hot spots . . . 80

2.6.1 An algorithm for batches with small data hot spots . . . . . 82
2.6.2 A counterexample for batches with large data hot spots . . . . . 84
2.6.3 The solution for batches with arbitrary data hot spots . . . . . 85
2.6.4 Simulation results . . . . . 88
2.7 Serving infinite sequences of requests . . . . . 90
2.7.1 The minimum protocol . . . . . 90
2.7.2 Asymptotical analysis of the minimum protocol . . . . . 91
2.7.3 Simulation results . . . . . 95
2.8 Conclusions . . . . . 96
