To the Instructor xii
To the Student xvii

CHAPTER ONE	Curiosity, Creativity, and Commitment	1
	Science Is a Way of Thinking	2
	Asking Questions	2
	Science and Art	5
	Common Methods of Acquiring Knowledge	6
	Tenacity	6
	Intuition	6
	Authority	7
	Rationalism	7
	Empiricism	8
	Science	9
	Emerging Modern Science	9
	Early Civilization	10
	Greek Science	11
	Medieval Science	14

The Scientific Revolution	15
The Science of Psychology	19
Summary	24
Review Exercises	25

CHAPTER TWO Research Is a Process of Inquiry 27

Basic Assumptions of Science	28
Observation and Inference: Facts and Constructs	28
Conceptual Models in Science	31
Inductive and Deductive Thinking	34
Models and Theories in Science	35
A Model of the Research Process	38
Phases of Research	38
Levels of Constraint	43
Summary	48
Review Exercises	49

CHAPTER THREE The Starting Point: Asking Questions 51

Asking Questions	52
Sources of Questions	52
Refining Questions for Research	54
Types of Variables in Research	57
Behavioral Variables	57
Stimulus Variables	57
Organismic or Subject Variables	58
Independent and Dependent Variables	58
Variables as Constants	60
Validity and the Control of Extraneous Variables	60
Research Ethics	61
Ethical Guides for Human Research	62
Ethical Principles in Research with Animals	67
Summary	69
Review Exercises	70

CHAPTER FOUR Data and the Nature of Measurement 73

Research Variables	74
Measurement	74
Scales of Measurement	77
Nominal Scales	77
Ordinal Scales	77

Interval Scales	78
Ratio Scales	78
Measuring and Controlling Variables	79
Measurement Error	80
Operational Definitions	80
Reliability, Effective Range, and Validity	82
Scale Attenuation Effects	84
The Need for Objective Measurement	85
Statistical Analyses	86
Summary	86
Review Exercises	87

CHAPTER FIVE Statistical Analysis of Data **89**

Individual Differences and Statistical Procedures 90

Descriptive Statistics 91

Frequency Counts and Distributions 92

Graphical Representation of Data 94

Summary Statistics 97

Summary of Descriptive Statistics 106

Inferential Statistics 107

Populations and Samples 107

The Null Hypothesis 108

Statistical Decisions and Alpha Levels 109

Type I and Type II Errors 109

Testing for Mean Differences 110

Summary 111

Review Exercises 111

CHAPTER SIX Field Research I: Naturalistic Observation and Case-Study Research **115**

Examples of Naturalistic Observation 117

Examples of Case-Study Research 119

The Value of Low-Constraint Methods 121

Conditions for Using Low-Constraint Research 121

Information Gained from Low-Constraint Research 122

Problem Statements and Hypotheses in Naturalistic Observation and Case-Study Research 125

Using Naturalistic Observation and Case-Study Methods 126

Making Observations 126

Ethical Issues 128

Sampling of Subjects 129

Sampling of Situations 130
Sampling of Behaviors 130
Evaluating and Interpreting Data 130
Limitations of Naturalistic and Case-Study Methods 131
Poor Representativeness 132
Poor Replicability 132
Causal Inference and Low-Constraint Research:
The Ex Post Facto Fallacy 133
Limitations of the Observer 134
Summary 135
Review Exercises 136

CHAPTER SEVEN Correlational and Differential Methods
of Research 139

Correlational Research Methods 140
Differential Research Methods 141
Artifacts and Confounding Variables 143
**What Makes Differential Research Higher Constraint Than
Correlational Research? 144**
When to Use Correlational and Differential Research 145
Conducting Correlational and Differential Research 146
Conducting Correlational Research 147
Conducting Differential Research 149
Limitations of Correlational and Differential Research 155
Problems in Determining Causation 155
Confounding Variables 157
Summary 157
Review Exercises 157

CHAPTER EIGHT Hypothesis Testing, Validity, and Threats
to Validity 159

Hypothesis Testing 161
Starting the Research With an Initial Idea 162
Statement of the Problem 162
Operational Definitions 164
Research Hypothesis 165
The Contribution of Theory to the Research Hypothesis 165
Testing the Research Hypothesis 166
Summary 169
Validity and Threats to Validity 170

Types of Validity	171
Some Major Confounding Variables	175
Maturation	175
History	175
Testing	176
Instrumentation	176
Regression to the Mean	176
Selection	177
Attrition	177
Diffusion of Treatment	177
Sequencing Effects	178
Summary	178
Threats to Validity From Subject and Experimenter Effects	178
Subject Effects	178
Experimenter Effects	179
Statistical Versus Practical Significance	181
Validity, Control, and Constraint	181
Summary	181
Review Exercises	182

CHAPTER NINE Controls to Reduce Threats to Validity in Experimental Research **185**

Threats to Validity	186
General Control Procedures	187
Preparation of Setting	187
Response Measurement	187
Replication	187
Control Over Subject and Experimenter Effects	188
Single- and Double-Blind Procedures	189
Automation	191
Using Objective Measures	191
Multiple Observers	192
Using Deception	192
Control Through Subject Selection and Assignment	193
Subject Selection	193
Subject Assignment	197
Control Achieved Through Specific Experimental Design	201
The True Experiment	201
Summary	203
Review Exercises	204

CHAPTER TEN Control of Variance Through Experimental Design: Single-Variable, Independent Groups Designs 207

Experimental Design 208

Variance 209

Forms of Variance 209

Controlling Variance in Research 212

Nonexperimental Research Designs 214

Ex Post Facto Design 214

Single-Group, Posttest-Only Design 215

Single-Group, Pretest-Posttest Design 216

Pretest-Posttest, Natural Control-Group Design 217

Experimental Research Designs: Testing One Independent Variable 218

Randomized, Posttest-Only, Control-Group Design 219

Randomized, Pretest-Posttest, Control-Group Design 220

Multilevel, Completely Randomized, Between-Subjects Design 221

Solomon's Four-Group Design 221

Summary 223

Statistical Analyses of Completely Randomized Designs 223

Other Experimental Designs 228

Summary 228

Review Exercises 229

CHAPTER ELEVEN Control of Variance Through Experimental Design: Single-Variable, Correlated-Groups Designs 231

Correlated-Groups Designs 232

Within-Subjects Design 233

Matched-Subjects Design 239

Single-Subject Design 244

Summary 244

Review Exercises 245

CHAPTER TWELVE Control of Variance Through Experimental Design: Factorial Designs 247

Factorial Designs 248

Main Effects and Interactions 249

Possible Outcomes of Factorial Designs 253

An Example: Children's Dark-Fears Study 257

Analysis of Variance in Factorial Designs	261
Variations of Basic Factorial Design	262
Within-Subjects (Repeated Measures) Factorial	264
Mixed Designs	265
ANOVA: A Postscript	268
Summary	270
Review Exercises	271

CHAPTER THIRTEEN Field Research II: A Second Look at Research in Natural Settings **273**

Conducting Field Research	274
Reasons for Doing Field Research	275
Difficulties in Field Research	276
Quasi-Experimental Design	277
Nonequivalent Control-Group Design	278
Interrupted Time-Series Design	282
Single-Subject Design	287
Reversal Design (ABA Design)	291
Multiple Baseline Design	293
Single-Subject, Randomized, Time-Series Design	294
Program Evaluation	297
Practical Problems in Program Evaluation Research	297
Issues of Control	298
Typical Program Evaluation Designs	299
Summary of Program Evaluation	300
Survey Research	300
Types of Surveys	300
Steps in Survey Research	301
The Form of the Survey Instrument	302
Developing the Survey Instrument	303
The Subjects in a Survey: Populations and Samples	304
Research Design of Surveys	307
Summary of Survey Research	307
Summary	307
Review Exercises	308

CHAPTER FOURTEEN Selecting Appropriate Statistical Procedures **311**

An Initial Example	312
A Decision-Tree Model	314
Decision-Tree Flowcharts	317

Identifying Research Variables	320
Identifying the Study's Major Characteristics	321
Selecting Appropriate Descriptive and Inferential Statistics	321
Secondary Analyses	323
Caveats and Disclaimers	324
Summary	325
Review Exercises	326

CHAPTER FIFTEEN Research Methodology: An Evolving Discipline **329**

New Directions in Research Methodology	331
The Evolution of Research Questions and Methods	331
The Impact of Other Disciplines	332
Multidisciplinary Research	334
Moving Research out of the Laboratory	334
The Impact of Computers	334
Science: An Interaction Between Empiricism and Rationalism	338
Review Exercise	340

APPENDIX A Writing a Research Report: APA Publication Style **341**

Structure of a Research Article	342
Writing the Research Report	342
Using Levels of Headings to Organize	342
Sections of a Research Report	343
Writing Style	352
Summary	352

APPENDIX B Statistical Tables **353**

B.1 Area Under the Standard Normal Curve	354
B.2 Critical Values of Student's t	356
B.3 Critical Values of the F Distribution	357
B.4 Critical Values of the Pearson Product-Moment Correlation	361
B.5 Critical Values of the Spearman Rank-Order Correlation	362
B.6 Probability Values of the Chi-Square Distribution	362
B.7 Random Numbers	363

APPENDIX C Statistical Computation Procedures 368**Descriptive Statistics 369**

Measures of Central Tendency 369

Measures of Variability 369

Measures of Relationship 370

Inferential Statistics 371

Parametric Statistics 371

Nonparametric Statistics 380

Summary 385**APPENDIX D Conducting Computerized Statistical Analyses
Using SPSS-PC+ 386****Organizing Data for Analysis 387**

Coding Data Before Entry 388

Entering Data 389

Data Analysis Using SPSS-PC+ 391

Data Definition Statements 391

Descriptive Statistics 394

Inferential Statistics 395

Summary 398**APPENDIX E Selected Answers to Exercises 399**

Glossary 407

References 427

Name Index 436

Subject Index 438
